THE BUILDER

A JOURNAL FOR THE ARCHITECT AND CONSTRUCTOR

WITH WHICH IS INCORPORATED "THE BRITISH ARCHITECT."

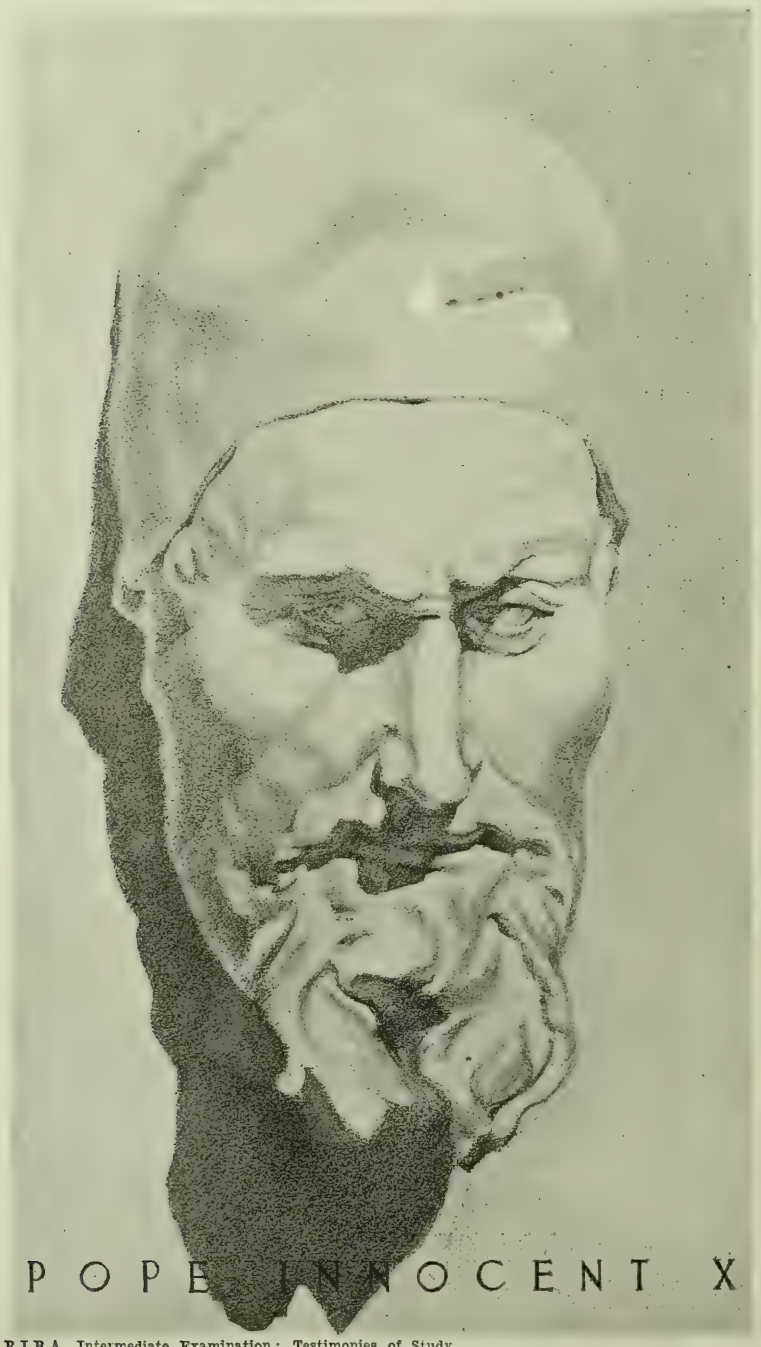
VOL. CXXXIII. No. 4411. AUGUST 19, 1927.

SEASIDE ARCHITECTURE

NATURE has not been kind to the Londoner in its gift of easily accessible seaside resorts. The sea, to be known in its glory, demands bays and promontories, mountains in the background, and resistant rocks upon which the waves can spend their fury. The sea, near London, has too much of its own way; in long straight expanses it washes against unresisting soil or piles its sand in huge bars that lie bare at high water. The Home Counties are, therefore, heavily handicapped by nature against their westerly competitors. Devon, Cornwall, North Wales, Scotland, and the Irish Coast, all possess beauties with which our flat south and east coasts are not so well endowed. What we have to ask ourselves, however, is whether or no we have made, and are making, the best use of what we have been given. Even the dullest strip of coast is invested with beauty if it is clothed with buildings such as are found inland in Sussex, Kent, and East Anglia. An English seaside resort has seldom expanded from an old nucleus of any importance. In many East Coast instances old towns that might have become popular lie under the waves, and the ever-receding coast line supports ribbons of buildings, hastily put up with no other purpose than that people might be able to eat, sleep and shop under cover near the sea during the holiday season.

Half the charm of such towns as Torquay, Kingstown (now known as Dun Laoghaire), and San Remo, arises from the serious industrial life of the place which is carried on side by side with the attractions, concerts, sports, and regattas, of better-class pleasure resorts. The solid breakwater, lighthouse, and landing stage stand to the common amusement pier much as the farm and oast houses compare with the tawdry villa. Wherever we find a pleasure town with no vestige of industrial life, there appears to be idleness used to no better purpose than to the erection of buildings whose frivolous inutility proclaims itself with unjustified arrogance, and the standardised garage has now arrived to introduce yet another discordant note.

Since it is evident that the majority of our resorts must continue to subsist solely on the pleasure seeker, it is clear that only by the local authorities taking an extra firm hold of amenities can any dignity whatever be obtained. Our latest experiences of new "up-to-date" seaside resorts are not encouraging, and if there is any effective awakening on the part of the public to what might be termed the architectural decencies, our pleasure centres will find their grip on the public relaxing, and journeys will be made further afield. It can be no great change for a man who lives in a London suburb to go to the sea for a change and find nothing but the familiar type of degraded suburban architecture fronting an uninteresting stretch of coast. In visiting the mountainous and beautiful coast line which are at our disposal we are more than ever exasperated when we find architectural nonentities obtruding themselves on all sides. There exists a striking object lesson in two suburbs of Dublin. Killiney Hill, on the south, was built over before the vulgar style of seaside architecture had reached Ireland. Here we find large and substantial villas, at least as decorous in material and design as those on the Riviera, surrounded by eucalyptus groves, each with a garden laid out on a fine scale and fitting well into the scenery of rock and mountain. Howth stands as a contrast to the north. Equally fine in situation, Howth Head and its approach have been built on recently. Natural beauty has been destroyed by tasteless bungalows and houses, culminating in the "Somali Village," so called from its resemblance to the shacks of Somaliland.



Local authorities in Great Britain in control of coast towns would do well to root out this evil by using to the full the powers of control that are now available to the enterprising. An excellent lead has recently been set by some of our more progressive municipalities, and we have seen many well-designed lay-outs, promenades, and pavilions; but these cannot redeem a town if private individuals are to be allowed to erect unsightly buildings as they please, and where they please without acknowledging any central authority or control. Mr. Guy Dawber's recent remarks on the spoliation of the countryside, apply with doubled effect to the seaside, where we do not often see a villa or bungalow designed by anyone who was properly fitted for the task. The problem of architectural treatment to suit the peculiar requirements of a holiday centre is one that must appeal to any architect of imagination, and it is the architect's right to be given an opportunity. The natural characteristics for a house intended only for summer use are lightness, balconies, verandahs, and plenty of colour. At present we undeniably find lightness, but it is not the lightness of elegance or refinement. It is the flimsy result of shoddy material thoughtlessly put together. Of colour treatment and co-ordinated schemes we find no trace. Imagination is fettered to shades of brown and dark green. It may be argued that we shall be worse off than ever if every Tom, Dick and Harry plunges into schemes of signal red and ultramarine used without knowledge or discrimination; yet one sometimes feels that even out of this chaotic turmoil some kind of taste and love of colour might, in time, arise, and certainly nothing could be much worse than our present murky acceptances when the good clean colours offered to the public by manufacturers and retailers are outnumbered by drab compromises to the extent of about ten to one. The trade is, of course, merely catering for a known public demand. A great deal depends upon the example set by those in authority in the buildings under their control, and one doubts whether many of these take their responsibilities sufficiently seriously. The average English seaside resort has unfortunately fully earned the disrepute that annually sends thousands of possible patrons abroad, and no amount of fine posters can prevent disillusionment on the spot.

Much might be done through the formation of art committees by those who are locally interested. If these committees were sufficiently influential they could make their views felt and would no doubt, in the end, be asked to advise on many questions affecting the amenity of their town, the lay-out of open spaces and public gardens, and the standard of design to be enforced upon firms and private individuals. The committee could see to it, for example, that a good standard type of lettering was adopted, and artistic co-ordination could be furthered in many ways. As a word of consolation to those who live in an architectural nightmare we would remind them that time works miracles in toning down ugly materials, in rotting imitation timbering, and above all it permits the growth of creepers that eventually hide the handiwork of which man may well be ashamed.

NOTES

The Gothic Spirit.

We are again reminded of the valuable activities of the Society for the Preservation of Ancient Buildings by the appearance of its fiftieth annual report. Mr. Thackeray Turner's few introductory remarks indicate how gradually the Society has worked its way into the confidence of both architects and the public, which was certainly somewhat lacking in the earlier years of the Society's existence. One point which we feel may be still open to some misunderstanding is the Society's objection to the copying of mediæval architecture. We all ought to know that there is still a live inheritance of Gothic tradition amongst us, though the teaching of the schools tends largely to discourage it. There is a wide difference between the so-called copying of mediæval architecture and the design of Gothic churches, such as that so successfully carried out by some of our modern architects. To say that the best designs by Bentley, Bodley, Scott, Tapper, and others are copying would be manifestly absurd, and if in adding to or altering an old church such architects choose to adopt the style in which the church is built, they would appear to come under the ban of the Society as to copying. Of course, we are aware that so much done in the way of Gothic additions to old churches was mere copying and often done with the intent to deceive as to which was new and which was old; but we doubt whether any modern attempt to design quite differently to our old traditional Gothic has produced anything nearly so much akin to the religious sentiment of the English church as the traditional Gothic itself. Pagan architecture may be very fine in its way and pagan ideas may be the best in the world if we choose to think so, but the belief of an immortality awaiting us somewhere in the empyrean is surely more really symbolised in the soaring vaults and spires of a Gothic church than by the heavy solidity of a classic church. To all of us, we suppose, Pagan and Christian alike, it is of some importance that the beautiful old Gothic churches which enrich our land shall be preserved, both for their intrinsic beauty and their historical value. But when we consider their uses as the temples of a modern Christian religion, it may be a matter of opinion whether structural additions should speak more of a modern or a Pagan spirit than of the inspiring beauties of Gothic architecture.

R.I.B.A. Intermediate Examination: Testimonies of Study.

Drawn by Mr. Edward Lyons. (*Published by arrangement with the Board of Architectural Education.*)

Restoration.

A striking illustration is afforded by the two views of Much Wenlock which we publish to-day of the value which time and tone and the use of certain materials give to our buildings. The Society for the Preservation of Ancient Buildings draws attention to this subject, pointing out the difference which the use of tiles and the general tidyings up and artificial colouring in the restoration and the many items due to time, tone and materials which make the unrestored building so attractive in comparison.

Criticising the Critics.

An entertaining argument has been conducted recently between Mr. A. A. Milne, the playwright and author, and Mr. E. A. Baughan, the dramatic critic of the *Daily News*. Many of the points raised are particularly interesting to those who have followed the articles upon architectural criticism appearing in our contemporary *Architecture*. Mr. E. A. Baughan gets to the root of the matter when he says "The essence of his (Mr. A. A. Milne's) argument is that authors, like any other tradesmen, have goods for sale. Critics, by giving their opinion of plays, may prevent the sale of those goods. On the other hand, if they praise plays they may increase the sales. Therefore, from the author's point of view, critics should either praise or be silent."

Architectural Criticism.

This brief outline of the critic's charter was dealt with in one of the articles, and similar conclusions were arrived at. The suggestion was made that an individual appeal to the public to purchase had some connection with criticism—at least with candid, thoughtful criticism. This suggestion is now receiving proof. These

ographs by Firth & Son.
Much Wenlock: Ashfield Hall before Restoration.

scussions in *The Daily News* confirm e opinion expressed in *Architecture* at architectural criticism cannot be aced in the same category with book- views or dramatic criticism. We are ell aware that the opinion is not shared several distinguished writers upon chitectural matters. They do not, we ink sufficiently appreciate the im- ications. Viscount Sumner mentioned e other day at the Conference banquet the R.I.B.A. that in a moment of rash- ss he had been tempted to say what he ought about modern architecture. nce then he had been very much dis- sed to keep to himself what he thought out the subject.

The Adelphi Stage.

THE re-laying of the stage at the Adelphi Theatre, Strand, for the first time for almost seventy years, is an event of some importance in the atre's history. The Adelphi, origin- built by a certain John Scott in 1806 his daughter, who had some histrionic l literary pretensions, was at the time wn as the "Sans Pareil," opening in 1820 under its present name. theatre, apart from a few more nt alterations to the facade, is grally the same as rebuilt by Thomas Wyatt in 1858, and while it may be oned as one of the most comfortable *intime* in London, the somewhat teful planning of the foyers and front of the house would not be acceptable he modern theatre-planner. Evidently economical lay-out of a site was not ne same vital importance then as now. e and auditorium are of about the e size, and the latter viewed from the of the boards, looks as incredibly ll as the stage appears viewed from stalls. Just at present, one is compelled to look from the back of the boards, for the reason that in place of the stage is a yawning void. This state of affairs has existed since Mr. John Brunskill, who has had more to do with "back stage" construction and scene-making than anyone in his profession, took up the fine old oak planking and uprights preparatory to relaying the stage with teak, a work rendered necessary by the rotting of several of the cross timbers of the stage where they entered the walls. Some magnificent oak timber is being used for the uprights, and when the work is completed it should be many a long day before the stage again has to be re-laid. Mr. Harry Powell is the theatre master-carpenter, having occupied that position for nearly fifty years, and for twenty of them at the Adelphi. The theatre, not unnaturally, presents now a rather forlorn appearance and one very different from the scene that will greet the eye on the next first night.

Housing Schemes and Private Enterprise.

AN experience can be harvested within the range of not many miles around London, from which very favourable conclusions may be drawn as to the merit, architecturally, of the average housing schemes undertaken by the County Council and other public bodies. It is not intended as a criticism of private enterprise, which has so often given us excellent results and is still doing so, if we have to find that the estate work undertaken by the County Council is often better planned, better designed, and with a larger regard for civic amenities. Whether we examine, for instance, the building at Dagenham and the neighbourhood in the east or East Acton in the west, we derive a very real satisfaction in noting the general improvement. It is replied to this that the work done, being subsidised, is produced under an advantage denied to the private builder, and this argument is not without its force, but, as an example much needed at the present time of more becoming building, is not the influence beneficient even though we do admit the argument as to the taxpayer? But surely even the taxpayer should be willing to pay towards a so-much-needed improvement in housing. We do not grudge paying when we see our money well expended in such important directions as the life and well-being of the people. There is need, we think, to distinguish between the taxation arising out of needs so well met, and taxation to keep hosts of officials in employment. When we see public money, on the whole, so well expended, it does seem to challenge the argument against subsidy. For there is a real return from which we all reap the advantage in the improvement of the conditions of the people through the taste and restraint, the healthier conditions created, which are so important in promoting loyal and contented citizenship.

Artistic Losses.

A PERTINENT suggestion in the press (under the letters S.B.) is that a duty of 10 or 15 per cent. should be imposed on catalogued works of national importance as an export duty, and that even if this did not stop the dispersal to other countries of our great art treasures, it would provide a fund which might be earmarked for the National Art Collection Fund. Obviously, in these millionaire days, there are buyers at any price, and we shall not be surprised to hear of the sale of a carpet which now lies in London at a price of £100,000, or of a charming set of ten Chippendale chairs at the same emporium marked at £500.

Child Travel.

MISS CLARA E. LAUGHLIN, the American writer, in an interview with the *Observer*, gives particulars of a new travel book in the form of a "child's guide to Europe." Miss Laughlin contends that one of the great glories of travel lies in its relationship to books. Interest can in this way be stimulated; thus she found the children eager to visit Baker Street where they could visualise Sherlock Holmes, and they insisted on going to Harley Street "to see where we thought Dr. Watson lived." If our memory serves us right, Dr. Watson never achieved Harley Street eminence, and his practice lay in the less distinguished neighbourhood of Paddington; however this may be, the idea of linking a child's wanderings with its knowledge of characters—real and fictitious—is valuable in arousing observation, and we hope that Miss Laughlin, in her book, will not omit architecture, especially modern architecture, from the child's vocabulary.

The Same after Restoration, showing New Roof and Dark Stained Oak Work.

GENERAL NEWS

Appointment.

Mr. Gerald Rogers, A.R.S.I., of Plymouth, has been appointed Building Surveyor and Sanitary Inspector to the Liskeard (Cornwall) R.D.C. He succeeds Mr. F. H. Williams, who has obtained a similar appointment under the Wigan R.D.C.

Brighton Sea-Road.

Increasing dangers of the cliff road from Brighton to Rottingdean, coupled with the fact that Rottingdean becomes part of Brighton in April, has led to the hurried preparations of plans for the construction of an under-cliff drive between the two places.

It is estimated that the work, which will not be commenced for at least two years, will cost £1,000,000.

A sea-wall is to be built, and the road will be sloped to guard against landslides. Gardens will be laid at the roadside and bathing-pools will also be built.

Discovery at Rye Church.

While installing a system of heating recently at Rye Parish Church, workmen had to cut away part of an old buttress, and this brought to light a doorway and staircase leading up to a priest's chamber, above the present vestry. We understand that a sum of £200 has now been given by a local parishioner, Lady McIlwraith, to make the room and the stairway possible of access to the public. The work is being carried out under the advice of the Society for the Preservation of Ancient Buildings.

Institution of Public Lighting Engineers.

The Institution of Public Lighting Engineers has organised a fourth annual meeting and conference, to be held at Brighton from September 12 to 14 next. The programme includes the opening of the exhibition of public lighting appliances in the Corn Exchange, and reception by the Mayor, on Monday, the 12th, a visit to the works of the Brighton and Hove Gas Company, and to the Brighton Corporation Electricity Power Station, etc. The Institution dinner will be held on Tuesday, the 13th.

Proposed New Thoroughfare: Newcastle.

The Newcastle Town Improvement Committee have formulated a scheme to be put before the Council for a new thoroughfare in Newcastle, which will cost approximately £730,000, and involve the demolition of well-known buildings, which include the Royal Arcade, the Church of Divine Unity and the Hippodrome Music Hall. The supporters of the scheme hold that unless there is a new main thoroughfare in the city the object of the New High Level Bridge will be negatived and traffic congestion will not be reduced.

Elizabethan School Building, Barnet.

The Hertfordshire County Council have bought a site for new buildings for the old Queen Elizabeth Grammar School, Barnet, and contemplate the sale of the old site and buildings in order to raise part of the cost. It is reported that the matter has given rise to some concern as to the future of the old hall of the Grammar School, which was founded in 1573. At the last meeting of the District Council a letter was received from the Society for the Protection of Ancient Buildings, stating that they considered it would be a great mistake if the hall were demolished. The views of the District Council and of the Society have been communicated to the County Council, who so far have made no decision on the point.

Ruins of Kenilworth Abbey.

A few years ago excavations revealed something of the size and beauty of the ruined Abbey of Kenilworth, but they were abandoned owing to lack of funds. The ruins are now in danger of serious damage from exposure, and it is proposed to cover up all except the outstanding features, the latter to be protected by a fence. It has been suggested that the articles brought to light should form the nucleus of a Kenilworth museum. The abbey was founded in the reign of Henry I, and has long been a ruin. In 1793 workmen carrying out excavations discovered part of an aisle, together with pillars and other ornaments of architectural beauty. In 1840 traces of the chapter house were unearthed.

Fishmongers' Hall.

An important scheme of interior decoration which was begun at Fishmongers' Hall last August, has now been completed, and has achieved something which is more in the nature of restoration than of mere decoration. Mr. H. S. Goodhart-Rendel, who has directed the work, has sought to get back to the original Greek character of the decoration applied to the building at its erection in the days of William IV., and though a great deal of it must have been pure conjecture, says the *Times*, he has produced what will certainly strike many observers as a very fine and harmonious whole. The main idea of the work just finished has been to uncover the original scheme of decorations; to remove the additions of later days, and to restore those features which had vanished; and finally to introduce slightly gayer colours owing to the difference in the London atmosphere.

W. H. Hudson Memorial at Ealing.

A communication issued by the Selborne Society, and signed by Lord Montagu of Beaulieu (president), Lord Avebury (vice-president), and Sir John Otter (treasurer), states :—

Adjoining the Brent Valley golf links, in the Borough of Ealing, is an estate of seven acres, the greater part of the grounds of which have, from being left almost entirely untouched for 15 years or more, become a recognised haunt of birds, and many species are known to have nested there. The Selborne Society has long wished to protect the ground in question, and at last there is an opportunity of acquiring it. It has been suggested that it would make a fitting memorial to the late W. H. Hudson, who helped the Selborne Society to establish the Brent Valley Bird Sanctuary at Perivale, higher up the river, which, 25 years ago, set an example that has been widely followed of preserving for urban districts the interesting birds of the countryside. The property was advertised as for sale by auction in building plots a few days ago, but some members of the Selborne Society have, for the moment, saved it from this fate. Donations can, therefore, now be invited towards its purchase and maintenance, which should be sent to the treasurer, Sir John Otter, at the Hermitage, Hanwell, W.7.

New Lambeth Bridge.

Work preliminary to the building of the new Lambeth Bridge for the London County Council has been begun by the contractors. This is the widening and raising of the approaches to the new bridge on both sides of the river. On the Lambeth side the level of the approach from Lambeth-road will be raised, and in order that it may not mask the entrance to Lambeth Palace, which is close to the present suspension bridge, the new bridge will start farther up stream than the old bridge. On the Westminster side the approach will involve the widening of the junction of Horseferry-road (directly facing the present bridge) and Grosvenor-road, the removal of the wharves, just above the present bridge, and the continuation of the Millbank-embankment over their site.

In 1924 the London County Council obtained powers from Parliament for the construction of a steel arch bridge 60 ft. wide with a carriageway 36 ft. wide, and two footways, each 12 ft. wide. The estimated cost of the bridge, says the *Times*, was £600,000, and the necessary road diversions and improvements £68,000. The bridge, as designed by the chief engineer and architect of the County Council, in collaboration with Sir Reginald Blomfield, R.A., is to be one of five steel arches faced with granite and supported on granite piers, the arches being elliptical in outline. The central arch is to have a span of 152 ft. and the two adjoining arches spans of 146 ft. The headway of the central arch above high water will be 21 ft. The width of the roadway between the parapets is to be 60 ft. The whole line of bridge will be one uninterrupted curve, the parapet will be solid. The undertak will occupy about three years, and the mation of the approaches nine months. soon as it is completed a temporary f bridge will be carried across the river a sl distance above the old bridge.

Timber Cutting in New Forest.

Sir L. Forestier-Walker informed Sir Croft, in the House of Commons, that si January, 1925, fifty-six contracts had b entered into or concluded for the cutt or sale of oak or beech timber in New Forest. The Forestry Commissio were unable to give an assurance such as t suggested, that no more contracts for sale of hardwood timber would be ente into until an agreement had been come with the advisory committee of the N Forest Association, but they had receive preliminary report from the Committee, an was hoped that a satisfactory course of ac could be worked out. In the case of one felling of hardwood since January 1, 1 were the woodcutters contractor's men; i the other cases the Commission's wood were employed. Thirty-five contracts been entered into since that date for cutting of hardwood timber, and some 285 cu. ft. of oak and 10,000 of beech had b sold or contracted to be sold. There unsold hardwood timber now lying on ground, which would be sold by contract.

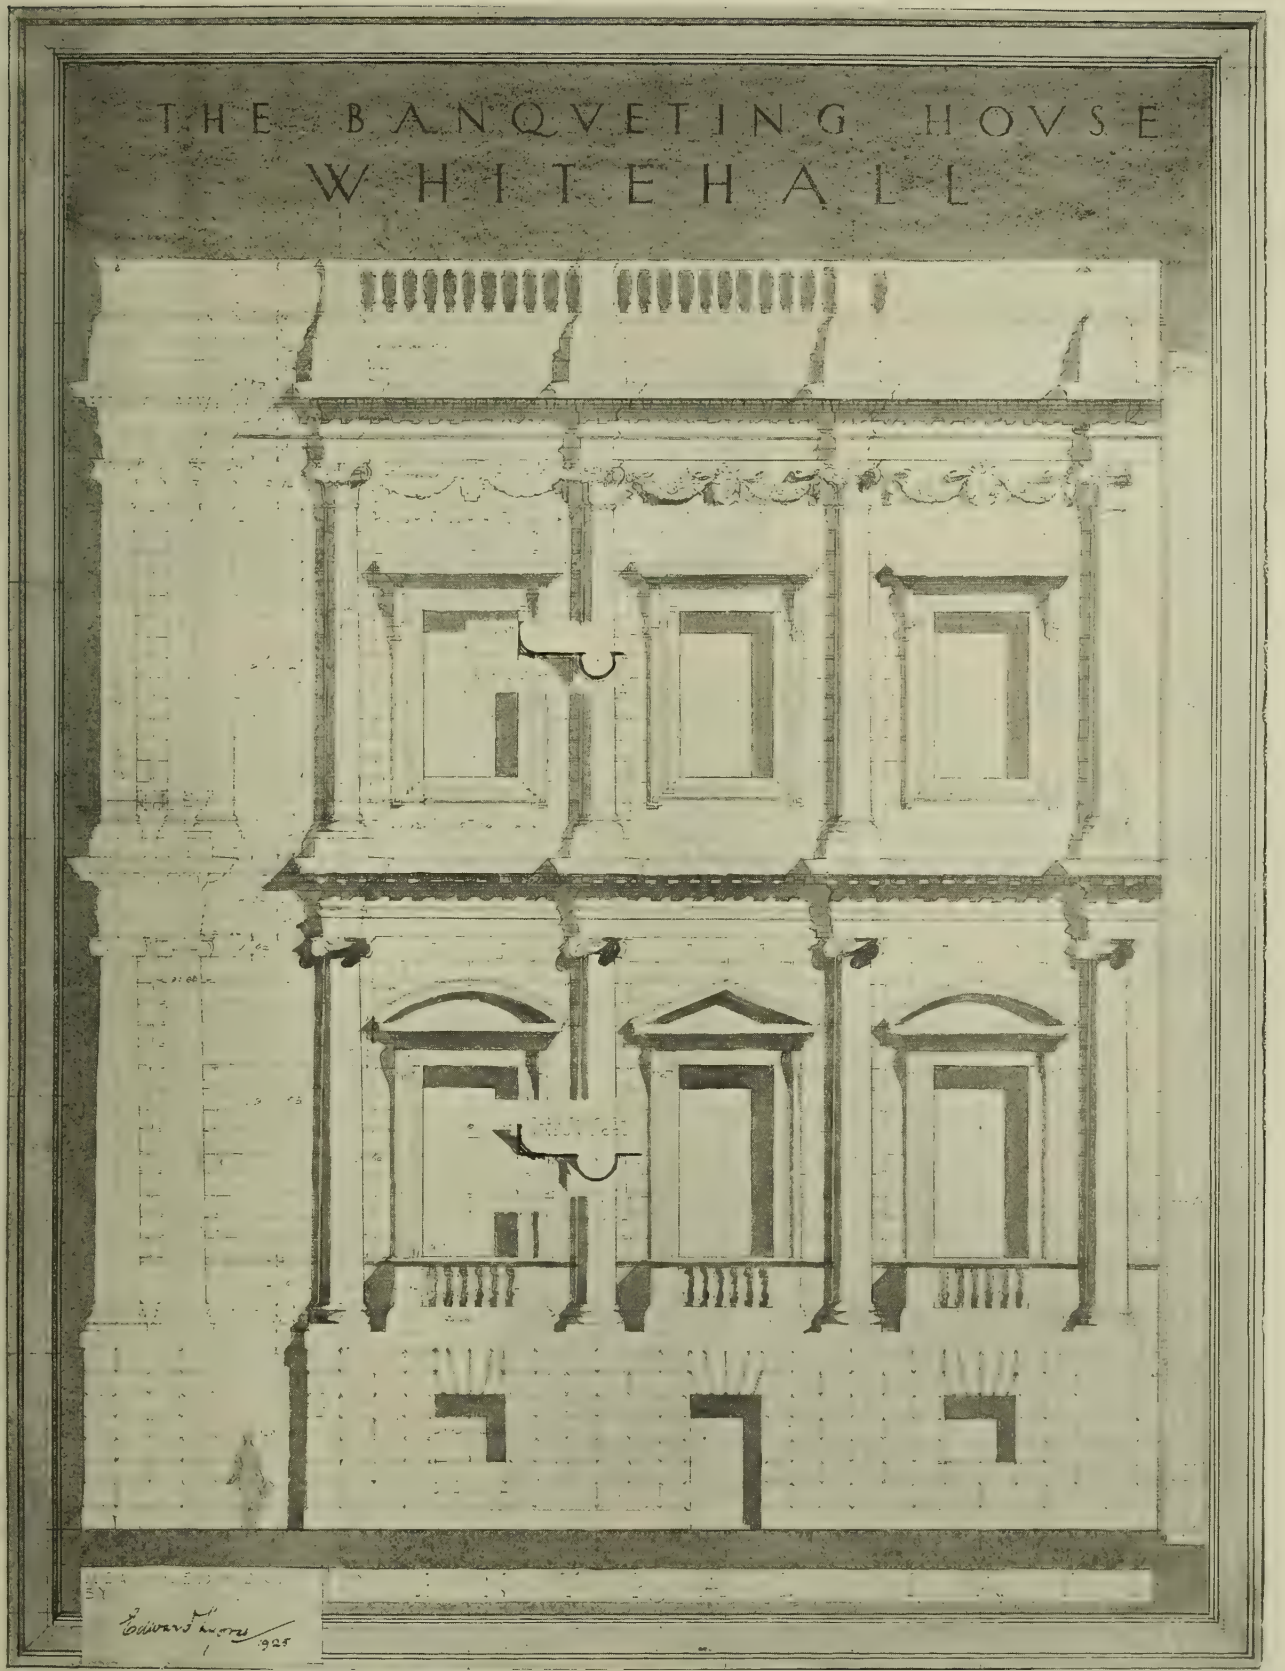
COMPETITION NEW

Birmingham Civic Centre.

Mr. H. V. Lanchester, F.R.I.B M.T.P.I., the assessor in this competit has made his awards as follows :—

First (Premium £1,000) : M. Maxim Romanoff, Rue de Vaugirard, Paris, and wife.

Supplementary Premiums.—1st (£ Messrs. G. Niedermann & K. Hippenm Zurich; 2nd (£200), Mr. L. M. Au Heston, Middlesex; 3rd (£100), Me Adams, Thompson & Fry, Victoria-st Westminster; 4th (£100), Mr. E. Pre Mawson, Victoria-street, Westminster; (£100), MM. G. Oulie-Hansen and Johans gt. 20, Oslo, Norway; 6th (£100), Armando d'Angelo, E. 185 Street, New City; 7th (£50), M. Ir. A. Boeken, Au dam, Holland; 8th (£50), MM. Louis Be and Georges Doyon, Rue Maublanc, Pa



Highly Commended.—Messrs. W. Davidge & G. A. Rose, Victoria-street, minster, S.W.1; Mr. James A. Swan, ler House, Paradise-street, Birmingham Alec G. Jenson, Newbold Terrace, Lea ton Spa.

The designs are now on exhibition i Art Gallery, Birmingham. We illustrat winning and first supplementary design week.

Herne Bay Municipal Offices.

We have received a copy of the con of this competition, in which the sched accommodation required is set forth addition to municipal offices, publi officials' departments, the schedule ca an assembly hall for concerts, dancing to accommodate 600 persons, with stag On the main ground-floor frontages suggested that there should be one lock-up shops or business premises wit ments. The corner site will proba leased as a branch of an important ba is also suggested that a portion of the ing over the second floor should arranged as to provide accommodati private offices which could be let if The cost of the work is not to £40,000, exclusive of furniture. Imp is attached to the adaptability of de being carried out in one or more sectio it is advisable that the assembly hall vided in a section that would not i with the immediate erection of m offices and bank premises.

Professor A. E. Richardson, F.R.I.B.A., is the assessor.

R.I.B.A. Intermediate Examination: Testimonies of Study.

Measured and Drawn by Mr. Edward Lyons. *(Published by arrangement with the Board of Architectural Education.)*

LUXEMBURG

By G. L. PEPLER.

Some years ago I jotted down some impressions of Innsbruck, the Capital City of a small Province, and tried to analyse the satisfactory completeness and self-sufficiency of the place. This summer the business of the International Federation for Housing and Town Planning took me to Luxemburg, also a capital of a small country, and presenting many similar characteristics. Luxemburg has a population of about 55,000, about 12,000 less than that of Innsbruck. It is not a manufacturing centre of any consequence, but is the headquarters of an important iron industry. It does not appear to possess such complete cultural facilities as does Innsbruck, but contains several fine public buildings.

The advocates of garden cities generally hold that when a town has reached a population of about 50,000 it has arrived at completeness, and that any further extension would merely result in a lessening of comfort, harmony and efficiency. Therefore, the town of Luxemburg presents an interesting example for study from this point of view, although the fact that it is a capital no doubt gives it advantages in respect to the number and quality of its public and commercial buildings. The old town, the home of Siegfried, first Count of Luxemburg, was built on the steep-sided, rock-faced promontory flanked by the valleys of the River L'Alzette and a tributary stream. Nature, therefore, provided for its protection, and later this was increased by the fortifications designed by the great Vauban. To-day, the town has spread beyond these valleys, which have been bridged, but they form a beautiful inner girdle of green, completed by public gardens on the site of the old fortifications across the neck of the promontory. Apparently only part of the banks of the valleys are in public ownership and, unless care is taken, there is danger of this beautiful feature being marred.

The Boulevard de Viaduct looks over the valley and is flanked in part by a stone balustrade which is carried round one of Vauban's old bastions, on which the War Memorial to the volunteers who fought for the Allies has been placed, and which makes a magnificent platform from which to view the panorama. The Railway Station, a fine building completed shortly before the War, on the main line between Ostend and Basle, is in the new town, but linked to the old by the Avenue de la Liberté and the Pont Adolphe, which carry an electric tramway and form a straight line finely focused on the station tower. The entrance to the Avenue from the Pont Adolphe is also well marked by the buildings of the Savings Bank and the Administrative Offices of the Railway that flank it on either side and stand up boldly above the Ravine.

Avenue and Pont Adolphe, Luxemburg.

The town possesses several "places," the largest being Place Guillaume, the scale of which is, however, rather reduced by a dividing clump of untrimmed trees. Here the citizens, sitting in front of the surrounding cafés or under the trees, can listen to the municipal band or, if it be wet, can move into the large Municipal Palace standing at the end of the Place. Here, too, the peasants from the surrounding country bring their fruit and vegetables to sell at the market stalls. The stone balustrade and steps that flank each side of the Town Hall and lead down from the Place to the next street below, are decorative features. Luxemburg is also fortunate in possessing a fair-ground—an adjunct to an up-to-date town the importance of which does not yet seem to be fully appreciated in England.

The cathedral is somewhat hidden. It was built early in the seventeenth century, and is what we should call Jacobean in style, and the stonework is elaborately carved. The city appears to be a stronghold of the Catholic Church and the seat of interesting ecclesiastical pageantry.

The place is adequately supplied with hotels, of which the best is probably considerably better than one would expect to find in a town of the same size in this country. There are two cinemas and several cafés dansants. The surrounding country is undulating and beautiful, and on looking back at the city one feels that, on the whole, man has not much marred a lovely site, but has adapted his works to it with considerable sympathy and skill. Many of the small front gardens were gay with bright flowers.

One of the city officials expressed the view that the town was too widely spread for its population and wealth, and could not well support such a mileage of roads. Certainly the roads were not well kept up, and, perhaps, according to Continental standards, the town is somewhat widespread, but this is not apparent to an Englishman.

It will be seen that the city possesses many of the characteristics of a full-grown garden city, and the garden city enthusiast visiting such a place will no doubt be inspired with confidence, but at the same time it will be impressed upon him that great courage has been needed to achieve so much. Probably a visit is more to be commended to the ordinary citizen, who would then surely be convinced that the creation of such a town—a place of character and quality rather than a mere agglomeration of buildings—was immensely worth while. Consequently he would then be prepared to support adequately any fresh garden city projects, so that success might quickly attend them and their civic spirit might be made manifest in fine streets and squares and worthy public buildings.

Pont Adolphe, Luxemburg.

CORRESPONDENCE

[While we are glad to publish letters on professional and other matters of interest to our readers, it must be understood that we do not necessarily endorse the remarks of correspondents, who will oblige us if they will express their views as briefly a possible.]

A Correction and Some Remarks.

Sir,—The dimension Mr. Troup gave m for the bottom of a fluting of the Parthenon was $11\frac{7}{8}$ in.; the $\frac{7}{8}$ dropped out of the type (See last week's issue, page 247.)

I will take the opportunity of thanking Mr W. Davidson and Mr. F. R. Hiorns for their expression of good will; it makes one humbl and quite shy.

The great problem in which we are mos interested is the improvement of moder building, and I wonder whether, with all m attempts, I have said what I have wanted t clearly and not confusedly. Perhaps, if may try to sum up in a few phrases the might serve as a sort of index.

At the present time we must do exactly w we are doing—we all have our training (and likings. Moreover, our employers hav been taught to expect "style" and "grandeur" from us; and till they are better in structed, or poorer, they will have it so After this year, however, what shall we ai at? Shall it be more dazzling style or mo perfect structure? Do we want to better a building or only the "magnificent specimen of architecture"? Do we architects wish be a fraternal part of the building communit or to be isolated into a hierarchy?

Very many, I am sure, would agree wi me in their general answers to these que tions, and on that basis I would make t following suggestions as to aims for t future.

We must pursue building *excellence* rath than "architectural" grandeur; we mu concentrate on *structure* rather than "style ---style, indeed, will take care of itself, b structure will not; our thought should rath be on *development* than on "design"; should see every problem as *work* inste

as whim. *Economy* is the way, not extravaance.

Remember Norman Shaw's remark: "In odern architecture the backs are always etter than the fronts."*

W. R. Lethaby.

* This may seem a hard saying, and I do ot want to overstate, but consider that acks have some reality of building about iem; an artist might make a water-colour of iem, whereas none but an "architectural raughtsman" could be persuaded to draw a ontage.

Liverpool Cenotaph Competition.

In the course of a letter to the *R.I.B.A. Journal* on this subject, Mr. Hastwell Grayon, F.R.I.B.A., writes as follows:—

"Mr. Maurice Webb practically advocates new suggestion governing the professional onduct and practice of architects. He wants make it an offence for an architect who, elieving that a municipality or other proioter of a competition has chosen an unitable site, criticises the site, should that rchitect have taken part in the competition. o far from silence being obligatory, I conider that it is the duty of an architect to peak out if, after full consideration, he beeves that a promoter of a competition is on he wrong lines. A competitor who must ecessarily have given much thought to the roblem is more likely to appreciate the untness of a site than one who has not worked nt a design. As a signatory and also a ompetitor I think that Mr. Webb, possibly nased by a personal regard for the selected rchitect, has, in the public Press, cast an nwarranted reflection on thirty-three fellow rchitects."

Mr. Webb makes the following comment n Mr. Grayson's letter:—

"I have made no new suggestion for overning the professional conduct or practice of architects. I merely wished to emhasise the need, if architecture by competiion is to continue, for unsuccessful competiors to abide by the award of the assessors, nd take no part in petitions or other public ctivities which, as in this case, Mr. Grayson dmits, cast doubts 'as to the suitability of he selected design.' The Liverpool Corporaion, happily, I think, took the same view, nd decided to abide by the award of their ssessor."

Pilgrims' Chapel Found.

The removal of growths of ivy have disosed the ruins of the Chapel of St. Thomas Becket at Brentwood, once famous as the sting place for Canterbury pilgrims. The hapel was specially erected for the pilgrims, terwards becoming the parish church, but lling into disrepair.

Brentwood Council has decided to ask the ociety for the Preservation of Ancient uildings to take charge of the building for e future. The tower is in a dangerous ate.

THE WEST KENT JOINT REGIONAL PLANNING REPORT*

This Report, by Mr. W. R. Davidge, F.R.I.B.A., F.S.I., etc. just issued, deals in a comprehensive and constructive manner with all the various problems involved in the Regional Planning of West Kent. We propose in a later issue to review the work in detail, and in the meantime some idea of its scope and character may be gained from the following quotations from the "Summary of Recomendations."

1. The definite allocation of all land to the use to which it is most suited, particularly the retention and fullest utilisation of the extensive agricultural and orchard areas which have always formed such a distinctive feature of the County of Kent, together with which must be considered the sustained efficiency of the existing market centres

2. The encouragement of such industries as are particularly suitable to the county by reason of their development of natural products, or for which, by reason of its proximity to London and the coastal ports, the county is most favourably situated. Steps to this end will be the systematic allocation and fostering of local industries, the revival where possible of village industries, and in special districts, where rail and water facilities exist, the provision of selected sites for new industries.

3. A continuance of co-operation and steady assistance between the various public supply services of the Region, particularly those dealing with water, drainage, gas and electricity, with the constant view of rendering these essentials available at a reasonable rate to all members of the community.

4. The steady improvement of all means of transport, the speeding up of railway services to all principal points of distribution, and, as far as possible, the encouragement of lower fares.

5. The co-ordination with the above of all existing road services with a view to the attainment of a completely efficient transport system.

6. The laying down, in advance of the actual need, of the essential lines of all new communications, together with such linking-up of existing routes as may be found necessary to complete their full utility, and the provision of adequate parking places. The detailed recommendations with regard to new arterial roads are set out fully in the Report. The Committee have throughout adopted the principle of retaining as far as possible in their entirety the old-established villages with their narrow highways, and providing for the rapid expansion of traffic by the provision of entirely new routes, thus avoiding the principal points of congestion and at the same time avoiding heavy and unnecessary expense.

7. The reservation of ample open spaces for the health, pleasure and enjoyment of all sections of the community. The principal recommendation under this heading is the preservation of practically the whole length of the higher levels of the North Downs, including the crest and the steep southern escarpment. Other recommendations are that there shall be ample playing field and sports ground accommodation available for every town and village in the area, including the provision of smaller children's playgrounds within easy walking distance of every group of homes.

8. The encouragement of tree planting, especially on the margins of new roads, of trees suitable to the soil, situation and surroundings, as referred to in the detailed report of Sir William Geary's Sub-Committee, and the protection of trees, wherever possible, in residential and industrial districts.

9. The setting aside of definite areas particularly suitable for residential purposes, with a view to collective settlement. Such areas must be allocated in positions convenient for road and rail access, and be conveniently in touch with existing centres of social life. The expansion of existing villages should be encouraged with discrimination, and the policy of the larger towns should be as far as possible the detachment of new communities by the provision of wide areas of open space.

10. The safeguarding of all that constitutes the character of the ancient villages, and as far as possible the preservation of all buildings that are particularly typical of their period.

11. The definite control of all new building, both as to design and material, to ensure a general harmony with its surroundings. Suggestive clauses relating to this will be found in the Report.

12. The Regional Committees recommend to all Local Authorities in the area that they should take early steps to prepare a detailed town-planning scheme for their district, incorporating the outline proposals and embodying the principles of this Report.

Town Planning.

The following town planning progress in England and Wales for the month ended July 31, is recorded by the Town Planning Dept. of the Ministry of Health.

Preliminary statements approved (Stage BB).

Staffs.—Stoke-on-Trent T.C. (Western No. 1 extension).

Sussex.—Steyning East R.D.C. (part).

Preliminary statements submitted (Stage B).

Essex.—Orsett R.D.C. (part). Surrey.—Wimbledon T.C. Middlesex.—Finchley U.D.C. (No. 2).

Resolutions received (Stage A).

Derbyshire.—Chesterfield T.C. (No. 3). Surrey.—Epsom R.D.C. (Banstead and Woodmansterne extension). Godstone R.D.C. Leatherhead U.D.C. Reigate T.C.

Yorkshire (West Riding).—Bingley U.D.C. (No. 2). Otley U.D.C. (No. 2).

The Railway Station, Luxemburg.

Place Guillaume, Luxemburg.

THE BIRMINGHAM CIVIC CENTRE COMPETITION

The Corporation of the City of Birmingham are to be commended for their wise policy in inviting architects and town planners to submit designs in competition for laying out an area for the purposes of a Civic Centre. The inevitable development of such a city as Birmingham, which holds an important central position in the West Midland region of England, necessitates definite action of this nature to ensure that the city of the future will fulfil the demands of increased traffic and development, and with this in view, the Corporation set a condition that adequate provision of sites for buildings of an administrative, educational and general character should be made, so as to enhance the dignity and to support the functions of the city. It was their aim to secure a lay-out affording the finest opportunities for an impressive grouping amid pleasant surroundings of the important public buildings which it was felt would be required.

We are in two minds as to whether the promoters of the competition were altogether wise in allowing the competition to become an international one. Certainly by so doing the prospects of good results were magnified; but as the whole problem was so essentially a British one, and sufficiently rare in this country to excite the imaginations of our keenest town-planners, it is to be regretted that it did not rest with them alone to satisfy the needs of the city. In this age of competition it seems unfortunate to minimise the opportunities of people most closely interested, unless the object be of international importance, as, for instance, in the case of the recent League of Nations competition.

It is interesting to note that of the first twelve successful entries, half were from foreign countries. In the treatment of the problem, the tendency of the six successful foreign competitors was the production of a greater variety in their designs. As they had less opportunity of inspecting the site, this may have led them to exercise a greater freedom with less regard to existing conditions. The disregard of the manner in which they presented their schemes showed discrimination, as the merits of draughtsmanship were at a discount and in no way influenced the assessor. The drawings included anything from a single lay-out superimposed on an ordnance sheet to a purely diagrammatic drawing, little attention being given to the detail of architectural elevations, proving that they were concentrated on the planning alone.

It is debatable whether they have viewed the proposition from an economic point of view or sacrificed everything to the achievement of an outstanding lay-out, as the area of road surfaces in some cases appears to be considerably more than the percentage suggested in the conditions.

On analysis, it cannot be overlooked that on the whole the competitors took a broader view of the whole question of road connections, refusing to be bound, or even influenced, by the smaller issues brought forward. The majority of the premiated foreign designs tend to evade certain tentative conditions, the plans submitted, with one exception, revolutionising any previous conception of a lay-out for the site. As this was quite legitimate, it was undoubtedly advisable to take advantage of it from the point of view of the lay-out regarded independently, though possibly not from its final application to the site.

The area for which a scheme of development as a civic centre was desired is contained within the space of a circle having the existing Hall of Memory as a centre, with a radius of approximately 900 ft. The site is on high ground which runs as a ridge north-east and south-west. In the immediate vicinity are already situated many of the principal buildings of the city, and a considerable percentage of the area allotted for development is at present occupied by small factories and business premises.

It remained for the competitors, in formulating their lay-out, to decide whether to retain as much as possible of any important existing work or whether to ignore the question of cost and compensation. It appears that the latter of these alternatives was the one to adopt, as the leading designs show this abandon, and possibly the assessor would have had greater difficulty in making the awards if the majority of competitors had moved with less caution and felt under less obligation to adhere to the former alternative.

We announce the competition awards this week, and Mr. H. V. Lanchester, F.R.I.B.A., M.T.P.I., who acted as assessor, has shown his capacity for perceiving the practical element in originality in awarding the £1,000 premium to M. Maximilian Romanoff, architect and town planner, of Paris, and his wife.

Although there can be no doubt as to the propriety of the decision, it seems that some of the designs, which take into consideration the existing gardens of the Hall of Memory and the established axial line, could be more readily adopted.

The main point that singles out the winning design is the realisation of the importance of road connections covering a wider area than that allotted for the civic centre, the actual siting of the principal buildings to be included, though of great importance, being purely secondary. It is questionable whether the winning design will ever be fulfilled in its entirety, as the problems that will present themselves in so doing will be infinite, and it would need an unexpected degree of civic spirit to persuade all property owners with independent interests to swallow the plan whole. M. Romanoff's lay-out would, if adopted, entirely disturb this area of the city, which raises the question whether the design has been selected purely because of its distinction or because of its practical merits, in relation to the possibility of fulfilment.

The six leading British schemes, comprising three prize-winning and three highly commended schemes, incorporate the original main axial line running roughly north-east and south-west, through the Hall of Memory and the Memorial Gardens, allowing this to govern the lay-outs, with the exception of that of the second supplementary award, which shows a slight divergence. The fundamental difference in character between British and foreign ideas is revealed by the fact that the British architects have endeavoured to abide as closely as possible to the tentative conditions, and to include as many of the suggestions put forward as possible. This has led them to act less independently, allowing themselves to be influenced by proposals already made rather than by clearing the decks for action.

The outcome of this is a high general level of merit among the designs and a lack of defined originality. The design revealing the fullest degree of fresh conception, that of Mr. L. M. Austin, A.R.I.B.A., of Heston, Middlesex, only achieved a measure of outstanding interest by a series of individual focus points and secondary features which are inclined to disguise any straightforwardness contained in the plan.

Generally speaking, the preservation of any existing building of importance, and as much of the existing roadways as was compatible with the requirements of their schemes, with a view to effecting economy, is obviously one of the pronounced ruling factors. It would be too lengthy a matter to review here the details of the ninety-one schemes submitted for consideration, but the following is an account of the general lines governing the prize-winning and highly commended designs.

The salient point which dominates the winning lay-out, by M. Maximilian Romanoff, is the linking up of the main thoroughfares which caused a complete readjustment of those axial lines of the civic centre, which the conditions seem to suggest. The competitor creates an effective north and south route passing through the civic centre by connecting Summer-hill with Suffolk-street, by so doing forming one of his main axial lines and constituting a very important road improvement in the heart of the city, and effecting a direct approach to the civic centre from the north and south. His other axis line intersecting this at right angles leads from Broad-street in the south at the intersection of Gas-street to Lionel-street on the north. An important feature of his plan is the ingenious way in which he has incorporated the Hall of Memory, situated on one of these. Although not forming the centre of his plan, it forms the focal point in his main avenue. The merit of his plan is primarily the actual lay-out of the roads, the placing of his buildings being less successfully managed.

The first supplementary premium of £200 is awarded to No. 28a, by Messrs. G. Niedermann and K. Hippenmeier, of Zurich. Their conception was a re-siting of the entire centre by establishing a direct connection between Broad-street and Lionel-street, and establishing a centre line passing through the Hall of Memory parallel to this. They have also had in view the desirability of fronting the existing Council House buildings, the Old Town Hall, and exposing the Chamberlain Memorial on to a central place. The buildings mentioned having as much architectural merit as any in Birmingham makes this point particularly commendable.

The whole of the sites for the principal civic buildings asked for, in this plan lie south-east of the Broad-street-Lionel-street road, and to the south-west of the place above mentioned. This plan covers a lesser area of improvement than the winning design.

The second supplementary award of £200 is made to No. 79, Mr. L. M. Austin, A.R.I.B.A., of Heston, Middlesex. He also has made a special effort to expose the façade of the Council House buildings and the Town Hall by a clever arrangement of a triangular open space, with a base line formed by Congreve-street, and with the Hall of Memory as a central feature within the triangle. The plan also includes a direct northern extension of Suffolk-street to Summer-row, fulfilling the same purpose as M. Romanoff's scheme. The structural lines of his lay-out are inclined to be overwhelmed by a superabundance of incidental features of too individual a character.

The third supplementary premium of £100 is awarded to No. 15, Messrs. Adams, Thompson & Fry, of Westminster. Their scheme follows what one might term the accepted pattern dictated by the existing position of the Hall of Memory and its gardens, and the suggestion made in the conditions that these should be repeated along Broad-street to the south-west.

In regard to road improvements, they have appreciated the desirability of extending Suffolk-street and Easy-row to connect with Summer-row. The most interesting road improvement contained in their scheme is the continuation of Paradise-street westward to link up with Broad-street, creating an effective shopping street.

A repetition of a building resembling the Hall of Memory on the south-west end of the extended Memorial Gardens rather mars their plan, as it tends to detract interest from the existing hall.

The fourth supplementary premium of £100 is allotted to No. 36, by Mr. E. Prentice Mawson, of Westminster, whose scheme follows similar lines to the last, having linked Suffolk-street with Summer-row, and continued Paradise-street west to Broad-street. A good feature is the continuation of Cambridge-street direct into the civic centre. The rendering of Mr. Prentice Mawson's drawings is worthy of mention, being of an arresting character.

The fifth supplementary premium of £100 is awarded to No. 87, Messrs. G. Oulie Hansen and Karl Johans, gt. 20, Oslo, Nor

Birmingham Civic Centre Competition: Plan of Area affected.

way, and their scheme has the same basic lines as that of Mr. Austin. The most noteworthy variation being the continuation of Cambridge-street to form a through connection to Lionel-street.

The lay-out of No. 91, by M. Armando d'Angelo, East 185 Street, New York, awarded the 6th Supplementary Premium of £100, shows an entirely new departure from the schemes already discussed. His lay-out has interest, but the weakness of this plan lies in the disregard of improving road connections and shows a tendency to make his building sites too awkward. The interest of his lay-out is centred in the fact that he chose as his main axis a line which appears to be the true axis of the Memorial Hall, following a direct line from north-west to south-east.

The 7th Supplementary Design, chosen for an award of £50, submitted by No. 51, Ir. A. Boeken, of Amsterdam, is not of outstanding interest, showing considerably less symmetry than the previous designs. The Suffolk-street to Summer-row improvement is certainly included, but it is less straightforward than in the majority of cases. A point in his favour is the use he has made of Cambridge-street, forming an important approach to the Centre.

The 8th Supplementary premium of £50 is awarded to Messrs. Louis Berthin & Georges Doyon, of Paris. This plan conforms to the general principles of the majority of designs by repeating the Memorial Gardens, a special new feature being the semi-circular western termination of the Civic Centre, into which Cambridge-street and Broad-street lead. The authors have appreciated the merit of continuing Paradise-street to Broad-street.

The first highly commended design, No. 72, that of Messrs. W. R. Davidge, F.R.I.B.A., and G. A. Rose, A.R.I.B.A., of Victoria-street, Westminster, like most of the schemes previously mentioned, links up Suffolk-street with Summer-row. In this design the gardens of the Hall of Memory have been retained and repeated on the south-west. Particular consideration has been given to the commercial and shopping areas in this scheme, a specially planned shopping centre on the south side of the allotted area being provided, into which no through traffic is allowed, sufficient provision being made for this elsewhere by the main streets passing through the Civic Centre.

The lay-outs of No. 76 by Mr. James A. Swan, F.R.I.B.A., of Birmingham, and that of No. 80, Mr. Alec G. Jenson, A.R.I.B.A., of Leamington Spa, were also both highly commended, and the lines of their schemes conform to the generally accepted plan.

It would be difficult for an assessor to select any further lay-out as distinctive from the mass of the remaining schemes, as a survey of these shows a moderately high level of conception with, generally speaking, the existing axis through the Memorial Gardens as the guiding principle. This goes to prove that the underlying idea governing the competitors has been one of practicability, with the ultimate materialisation of the scheme in view.

Chalice and Paten for the Chapel of the Holy Cross, Westminster Abbey.

The chalice which we illustrate was designed with a view to incorporating an ancient cross, given by Miss Mildred Flood-Jones, the daughter of a former Precentor of the Abbey. The exact history of the cross is unknown, but it is probably a pectoral cross worn by a Crusader. It is of interesting mediæval design, and doubtless contains a small relic. The cross has been placed flat in the centre of the base of the chalice, the stem above forming an octagonal canopy over the cross. The chalice is of silver gilt, and was made by Messrs. Asprey & Co., Ltd., of 165, New Bond-street, to the architect's design, and was subscribed for by some old residents in the Close and friends.

The work has been designed by Mr. J. O. Cheadle, A.R.I.B.A., A.R.C.A., of 2, New-square, Lincoln's Inn, W.C.2.

ARCHITECTURE IN CONCRETE*

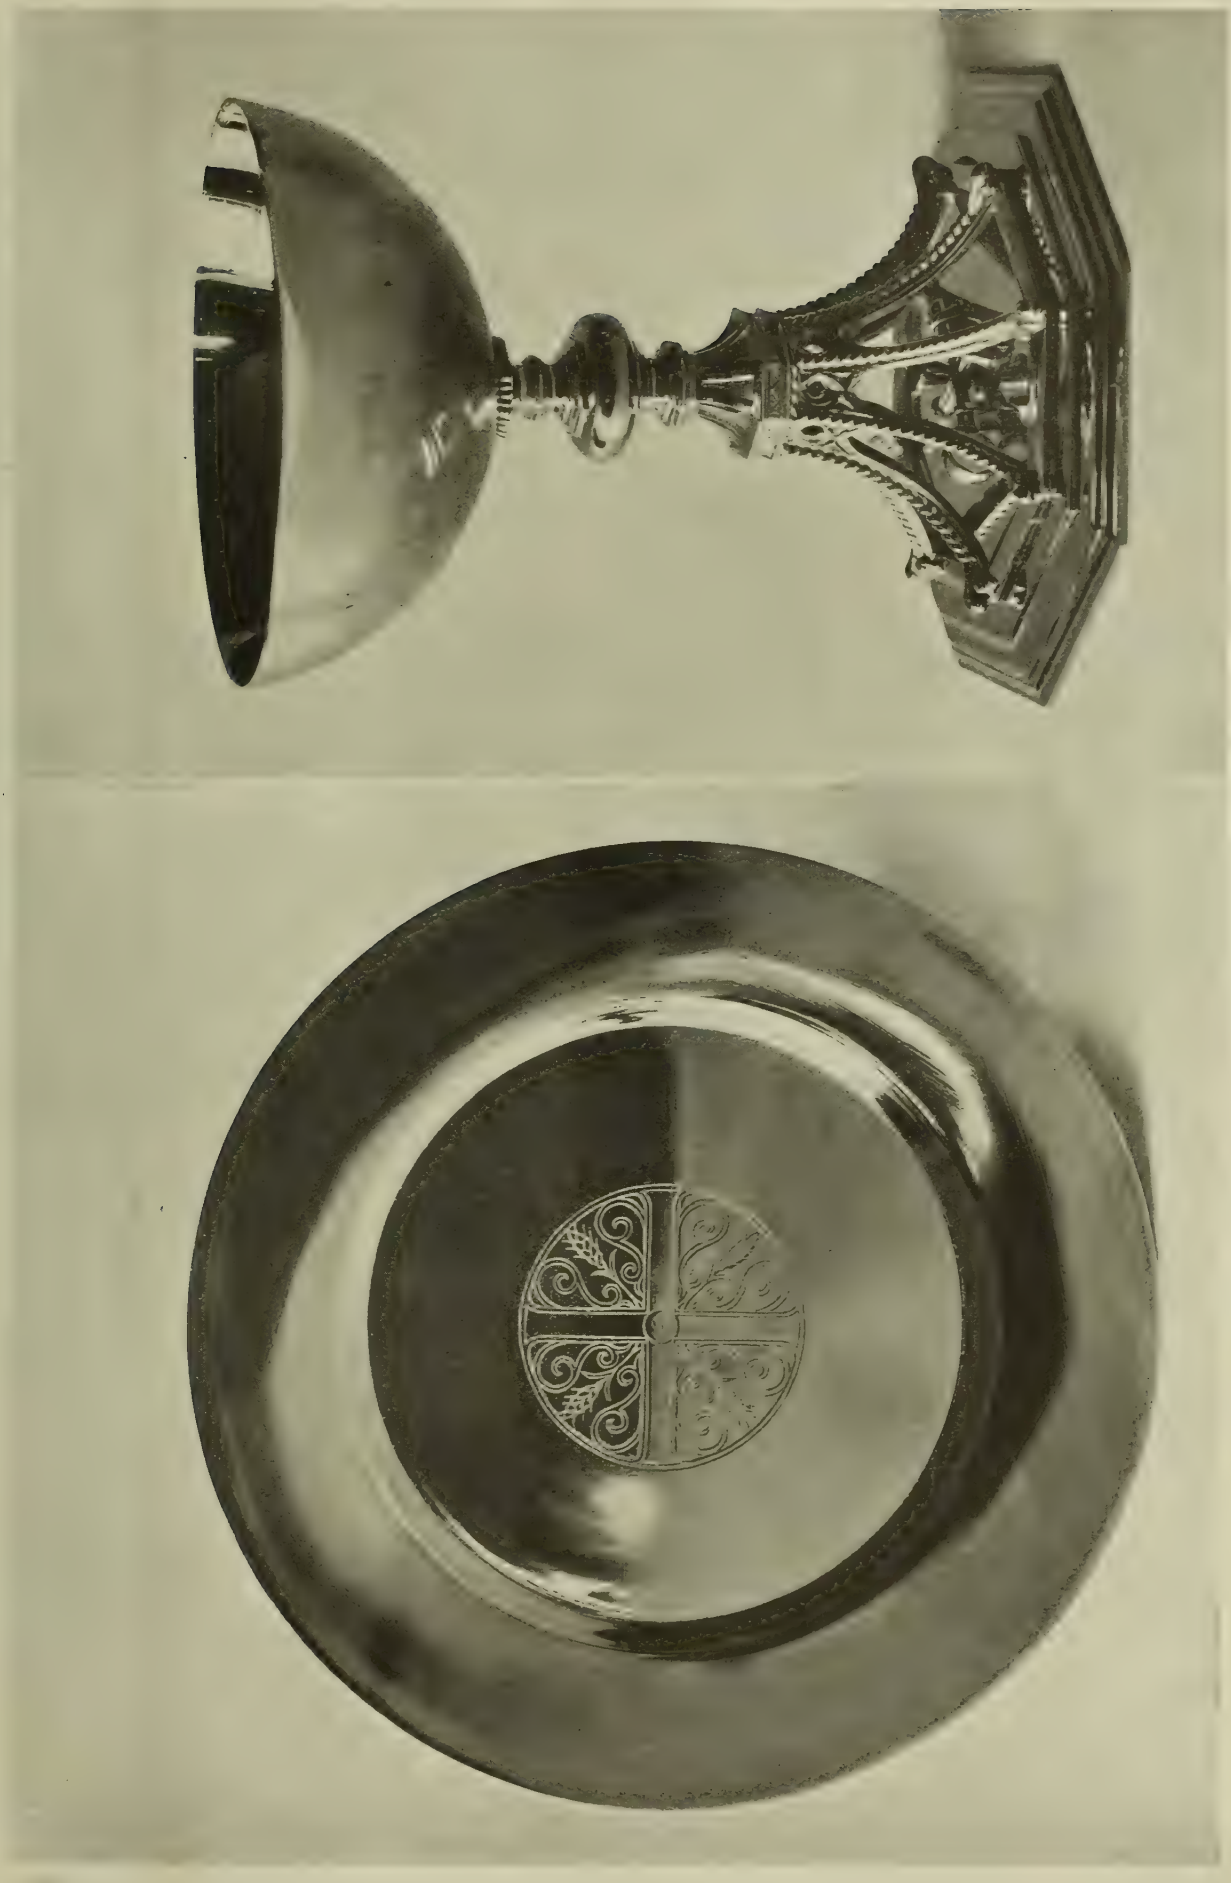
The architecture of concrete falls under three heads. We find, in plain concrete, an emphasis on mass and solidity, in reinforced concrete tenuity and lightness, and we sometimes find concrete attempting to compromise with classical proportions and acceptances. Experiments in the first two directions have led to brilliant and promising results, but with this success there is coupled a curious lack of human quality; the buildings convey not so much the sense of the studio as of the inexorable realist and the æsthetics of engineering. This phase must, no doubt, be consolidated fully before the touch of craftsmanship and collaboration find their rightful places, and this volume indicates what sure foundations are being laid ready for more human treatment when the time is ripe. The book affords proof, if such is needed, that concrete is open to different interpretations as the building material of the future. Examples of its modified classical use, as in the Ramsgate Pavilion and the Californian High School, seem to promise little that a very full familiarity with fixed forms has not already given us. On the other hand, the enjoyment of new-found liberty is vividly expressed in the Breslau Centennial Hall, with its horizontal lines, the airy grace of the Skurubron Bridge, the solidity of the Dutch Radio Tower, and the vertical insistence in the Derby Power House and the Hollywood Terminal Building. The Spanish Baroque detail on some of the Californian exteriors shows that even all-pervading concrete has not killed local character, and that it can be used more readily than stone for cast and cut ornament. But, perhaps above all, we are led to conclude that the future lies mainly with effective proportion, grouping of masses, and silhouette.

We are given an opportunity to compare the homeliness of the Welwyn houses with the new and rather bizarre conceptions of such men as le Corbusier and Lurcat. These last represent highly desirable experiments of a novel kind. Probably the architects would be the first to admit that their designs are of a tentative nature, and, attractive though they may be, they still seem to be promising pioneers rather than finished conceptions. This is as it should be, and the same may be said of the interior of the Breslau Centennial Hall, where the construction proclaims itself with perhaps undue vehemence. Most of the buildings illustrated will horrify the layman. The churches of MM. A. and G. Perret, regarded in terms of construction, are straightforward enough, yet, so strong is the power of association, that it will be many years before the ordinary Englishman could accept them, or anything like them, as suitable places of worship. Education and familiarity with similar work will in time break the barriers, but the architect's difficulty is to find clients able and willing to finance experiments and so give the lead.

To the architect there is little in this book that could be called freakish, and the author rightly insists that "there is a real value in the building which is original without being eccentric." The trouble lies in deciding what eccentricity is. We find, for example, the Einstein Tower (Plate LXII.) highly praised and the Radio Tower at Kootwyk (Plate LXIV.) "very nearly" achieving the monolithic excellence of the Eric Mendelsohn building. The Einstein Tower no doubt clothes its internal apparatus as neatly as a glove, and yet in doing so it certainly contrives to appear eccentric in comparison with the more serene Radio Tower. In the Einstein building every corner is rounded off, and the eye, rightly or wrongly does not accept this as a reasonable necessity. The impression is that a great deal of avoidable trouble must have been taken to curv these angles. We visualise shuttering a having square corners, and a tower erecte in concrete is therefore expected to sho corners, either splayed—a simple operatio —or of the usual kind seen on the Radi Tower, which is entirely original withou being nearly so eccentric as its Einstei rival. The Radio Tower exhibits a com mon departure from our stone and bric acceptances in that its angles are cut int by windows. This, however, is so obvi ously of practical advantage, and reinforce concrete so manifestly capable of the *tou de force* that the eye accepts it as one o the new departures that it is prepared t welcome. This Radio Tower, designed b Mr. J. M. Luthman, is in many ways th most striking and promising of the build ings illustrated. It combines commandin dignity with perfect scale.

Mr. Bennett's introduction admirabl sums up the influences that are at wor compelling us to revise our views on th architectural treatment of concrete. H emphasises the continuity of the vertica support, the slender pier and wide span and the necessity of introducing colour an adequate surface texture. The outer cover ing of M. Marrast's church at Vincenne is erroneously described as being of bric instead of stone, and the reader would hav been grateful for an index of the plate and possibly a cross reference from th plates to the text. The use of Roma letters on the plates does not hasten th finding of the one required. Mr. Yerbury' photographs are excellent.

* *Architectural Design in Concrete.* By T. P. Bennett. Photographs compiled by F. R. Yerbury. (London: Ernest Benn, Ltd. 1927.) Price 30s. net.



Mesopotamian War Memorial.

The memorial to the British and India soldiers who fell in the Mesopotamian cam paign, which is now being erected on th waterside at Basra, will be completed a few weeks hence. Designed by Mr. Edward Warren for the Imperial War Graves Com mission, it is in the form of an arched colonnade with pylons at regular intervals and with an obelisk, 50 ft. to 60 ft. high, a the central feature. At the back of th colonnade there will be polished slate panel inscribed with the names of the fallen an the missing. Great trouble was experienced at the start in finding a foundation, an finally 40 ft. reinforced concrete piles had t be driven in. As Iraq is a stoneless land every stone used in the memorial has had t be brought from Delhi, already fashioned and numbered. Here they were trimmed and put into position. The inscribed panels are being made in England. No officia statement of the cost is available, but it i believed that it will be about £30,000.

Restoration of St. Séverin, Paris.

Between Notre Dame and the Boulevard Saint-Germain there stands the little church of Saint-Séverin, one of the oldest in Paris. The church dates from the 13th century. Some of its window glass is 400 years old and it has one feature which is now unique in Paris—a churchyard encircled by a cloister, which, says the *Times*, flanks it on its southern side.

The churchyard of Saint-Séverin measures only some 25 by 40 yards. For many years it was concealed by modern buildings which on one side, even encroached upon and displaced the cloister itself. These buildings have now been removed and soon the little quadrangle will be open to the public. The cloister encloses two sides of the charnier its third wing has disappeared. It consists of ten Norman arches supported by slender columns and buttresses, each of which is simply ornamented with leaf moulding and surmounted by a gargoyle. The roof of the cloister is built up on fluted vaultings and covered with little old red tiles. In some places, before the present restoration was begun, it had collapsed. When the work of restoration is complete the quadrangle of Saint-Séverin will be visible as a little haven of shade and foliage from the hot pavement of the Rue Saint-Jacques.

Paten and Chalice for the Chapel of the Holy Cross, Westminster Abbey.

Designed by Mr. J. O. Cheadle, A.R.I.B.A., A.R.C.A.

Birmingham Civic Centre Competition.

We illustrate this week the winning design in this competition, by M. Maximilian Romanoff and Madame Romanoff, as well as the design awarded first supplementary premium, by Messrs. G. Niedermann and K. Hippenmeier. The full awards are given under Competition News (page 268), while a critique of the competition appears on page 272.

"Grims Close," Henley-on-Thames.

This house has been planned for a hillside site comanding a distant view of the River Thames near Henley-on-Thames. It is built of hollow walls with a coved eaves soffit, the whole rendered with Atlas White cement with a textural finish giving a play of light and shade. Old red pantiles on Ruberoid form the roof covering. Large double-folding shutters are used, on the south elevation, to the large round-headed windows of the main rooms, from which pleasing views are obtained of the gardens and river. Internally the hall and main suite of rooms have large coved ceilings, parquet flooring, and with joinery painted and stippled green, the dining-room being painted and glazed throughout.

Mr. Spencer H. Lawrence is the architect.

Hospital of St. Mary and St. Thomas a Becket, Ilford, Essex.

The rebuilding of the old Chaplain's House and Pensioners' Lodgings was necessitated by the widening of the street which has been undertaken by the local authority. The old buildings, which were erected many years ago during the Victorian era, were without any architectural merit. In planning the new work the architects have endeavoured to produce a quiet and restful design of a Jacobean character. The blocks are placed on either side of the existing church, which is being re-roofed to link them together and form a complete and harmonious scheme.

External walls are of brick with cement stucco distempered a broken white, and hand-made sand-faced red bricks are being used for facings with dressings of Weldon stone. The roof is covered with hand-made roofing tiles. External doors and window-frames are of oak, the latter fitted with wrot-iron sashes and leaded lights. Internally the treatment is on very simple lines, but features are made of a number of interesting fireplaces carried out in brick and tile to varying designs.

The general contractor is Mr. C. Deaves, of Bures, Suffolk; and the following are sub-contractors :—Spoedy & Eynon, London, electric lighting; McDowall Steven & Co., heating and hot water and sanitary fittings; The Albany Forge, Ltd., steel windows and leaded lights; William Brown & Son, of Redhill, red bricks; Roberts Adlard, Ltd., roofing tiles.

The architects are Mr. F. W. Speaight in collaboration with Messrs. W. J. Kieffer and H. S. Fleming, A.R.I.B.A.

Cottages in Oxfordshire.

This group of six cottages is to be built with local materials, and the building traditions of the county will be faithfully observed. The lower walls will be in stone, part roughcasted, and the upper floors slate hung. The chimneys will be in stone, and the roofs slated in random slates, with "swept valleys." All joinery will be in oak, treated with lime.

Mr. T. Frank Hawkes, F.R.I.B.A., is the architect.

Green Park Hotel, Piccadilly.

This hotel, which was opened recently, stands on the site of the old Isthmian Club, which previously had been the town residence of the late Sir Julian Goldsmidt. The building has been practically gutted, the former inner hall and staircase have been demolished and the space, together with that of the former reception rooms facing Piccadilly, has been thrown into one to form the restaurant, while other rooms in the rear have been similarly combined to form the grill-room. The former billiards-room on the ground floor now forms part of the lounge, where the new marble main staircase leads to the banqueting-room and upper floors, which are also served by five lifts. Three new stories have been added to the old building, two of which are in the mansard roof, and the design has been carried out so as to harmonise as much as possible with the lines of the old Portland stone elevation, which forms one of the features of Piccadilly.

There are about 80 letting rooms, all well lighted, most of them arranged in suites containing lobby, sitting-room, bedroom, and bathroom, the single bedrooms also having a bathroom attached in each case. The corridors are laid with rubber, and an elaborate electric-lighting and telephonic inter-communication system has been installed; the reception rooms on the ground floor are fitted with a system of cornice lighting on somewhat new lines, and include an amber dome, which forms a feature of the restaurant. The kitchen arrangements in the basement have been completed under the supervision of English and Continental experts.

The architect is Mr. Paul Hoffmann, of Capel House, New Broad-street, E.C. 2.

Messrs. William Willett, Ltd., of Sloane-square, were the builders, and the following firms were sub-contractors :—J. A. Eshelby, decoration; Stitson, White & Co., heating and plumbing; T. Clarke & Co., electrical installation, lighting, heating, power, bells, telephone, etc.; Waygood-Otis, Ltd., lifts; Jones & Willis and Baqués, Ltd., wrought-iron work; Anselm-Odling & Sons, Ltd., marble work; Galsworthy, canopy; Haskins & Bros., Ltd., external bronze work; Colman & Son, entrance doors; Hollis Bros., parquet floorings; Crittall Manufacturing Co., Ltd., bronze window frames and mirror frames; London and Wales Steel Construction Co., steel construction; Cashmore Art Workers and Haywards, Ltd., external balconies and railings; C. Secchi, kitchen installation; Merryweather & Sons, Ltd., fire appliances.

R.I.B.A. Testimonies of Study.

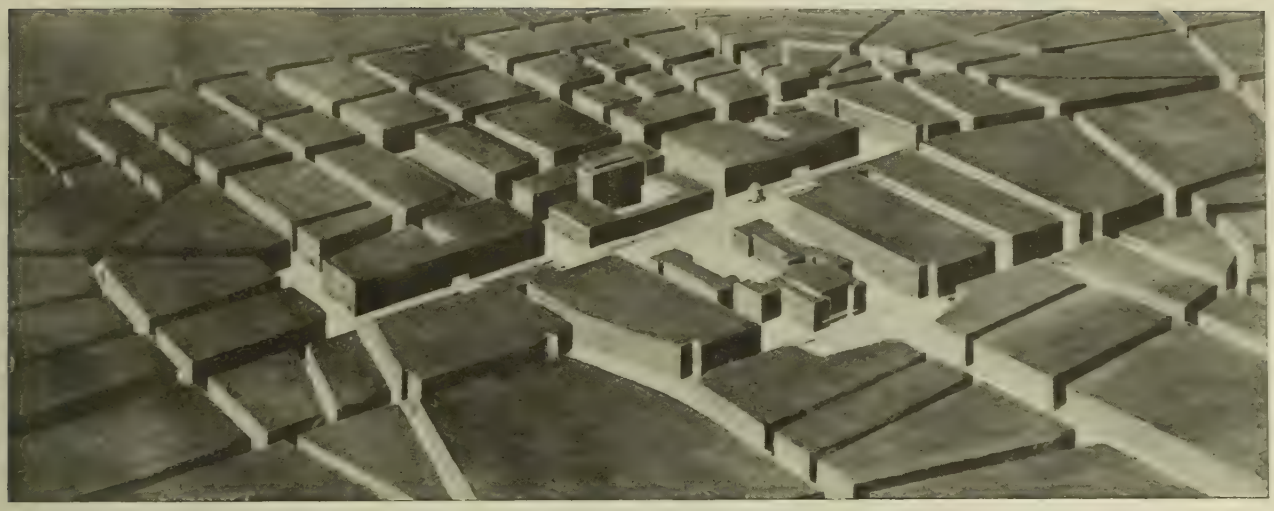
We illustrate this week some measured drawings, by Mr. Edward Lyons, approved by the Board of Architectural Education as Testimonies of Study for the R.I.B.A. Intermediate Examination. Other drawings belonging to this set were given in our last issue.

Hairdressing Premises, Cheltenham.

These premises, which are situated on the Promenade, Cheltenham, have been modernised and enlarged for Messrs. F. J. Foice and Co. by Messrs. Leonard W. Barnard, F.R.I.B.A., and Partners, of Cheltenham and Winchester. The accommodation provided may be studied from the plan and section which we give this week. The architectural scheme is of simple and dignified character, while the mirrors, lampshades, brackets, etc., are all designed to be in harmony. The lighting is on scientific lines, each lamp shade dividing and multiplying the rays, giving maximum light, concentrated on the operator's work without any glare. Each salon is supplied with a secondary circuit which enables the hairdresser to proceed without delay should a fuse occur in any part of the building. The salons are conveniently fitted up with shelves of hygienic character, and sterilisers are placed in different parts to ensure cleanliness. The panelling in the gentlemen's department is carried out in Marmorite, which is cleaned easily, and has a highly glazed surface that will not stain. Finely grained oak has been used for the general scheme of decoration, with a combination of black and white Sicilian statuary marble and "Vert Mede" Norwegian marble.

BOOK REVIEWS

Organ Building: *How to build a small two-manual chamber pipe organ.* By H. F. Milne. (*Musical Opinion*, 13, Chichester Rents, Chancery-lane, W.C.2.) Price 7s. 6d. net.

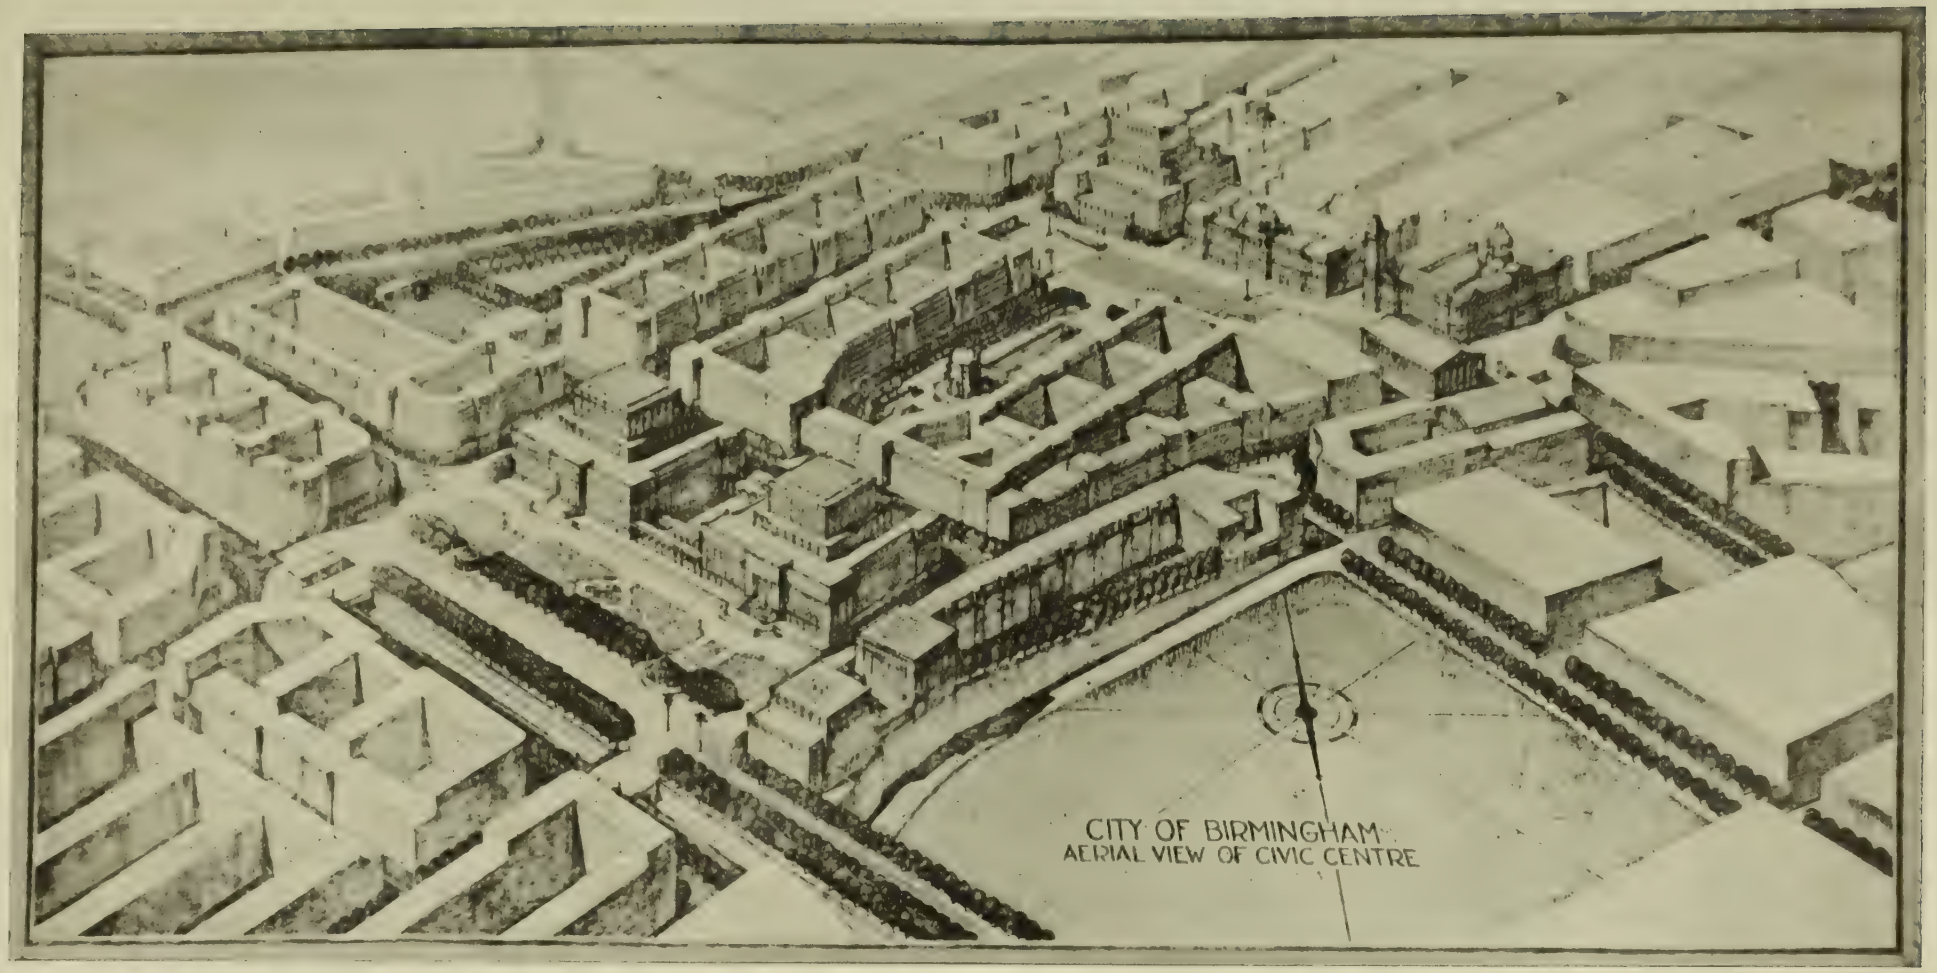


This admirable little book, with its excellent reproductions of line drawings, is written as a practical guide for amateurs. It contains an amount of detail which indicates a close acquaintance with the theoretical and practical sides of organ building. The enthusiast who wishes to try his hand at building a small pipe organ will do well to study this book. Opinions may well vary to the comparative advantages of a small pipe or reed organ in the home, and especially from the point of view of the organist who wishes for something more than two manuals and pedal for practising purposes.

The author draws attention to the difference of opinion as to the best form of swell pedal. This difference is possibly not so pronounced as formerly, as the distinct advantage of the balanced pedal is that the foot can immediately be removed without the harassing and uncomfortable feeling that the swell shutters are going to close with a bang. Also there is less opportunity of confining one's pedal work to the left foot.

It is a slight blemish in an otherwise interesting and useful little work that "cypher" (p. 106) and "cipher" (p. 158) whilst meaning the same thing should be spelt in two different ways; "Belection" (p. 148) should surely be "Bolection." These are, however, but small matters that could easily be rectified in a second edition.

Builders' Standard Administration and Practice. By J. H. Bennetts, A.I.O.B. (London: Crosby Lockwood & Son.) Price 4s. 6d. net.



This handbook is likely to prove invaluable to the junior employed in the building industry. The author, Mr. J. H. Bennetts, A.I.O.B., has designed his book to help staff members in builders' offices, foremen, young craftsmen, and technical students to visualise and link up the work of the business section in which they operate, and at the same time obtain an intellectual grasp of the office routine of other departments of the business. The importance of this is stressed by Mr. Bennetts, who rightly says that looseness in administration leads to chaos, inevitably resulting in loss of profit and business. There is a valuable chapter on Costing, and Policy and Management and the Works Superintendent are other sections among many dealt with. The book is fully illustrated by charts and diagrams, and has a Foreword by Professor C. H. Reilly.

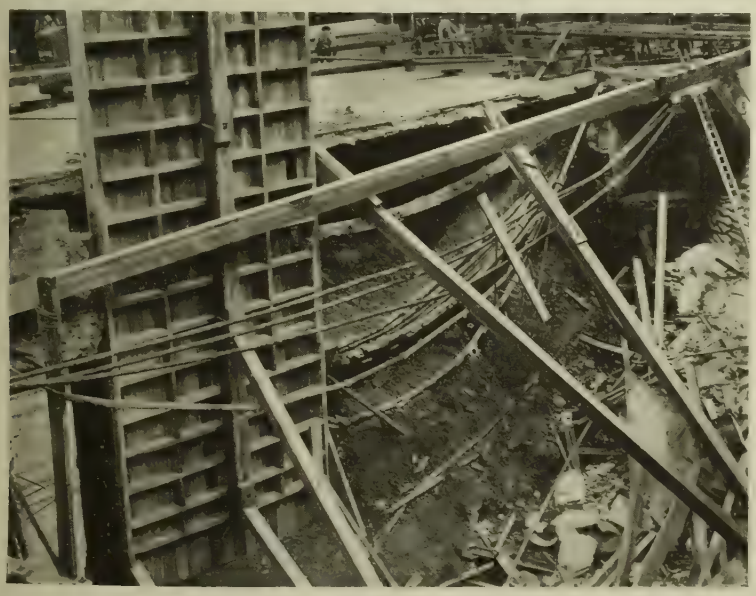
QUANTITY SURVEYING IN THE U.S.A.



In the course of an address on this subject, delivered before the second annual meeting of the American Institute of Quantity Surveyors, on June 8, at Washington, Mr. E. J. Brunner, Editor of *The American Contractor*, said the essence of fact behind a modern transaction in placing a construction contract on a lump-sum basis was that a party commonly called the owner employed either his own or other's services to execute what was commonly called a set of plans and specifications. Through years of experience it had become possible that this set of plans and specifications would be so complete and exact that from them trained persons might compute the labour costs and the material costs, and by adding to these certain other items, such as overhead costs and profits, arrive at a contract price to deliver the building "broom clean." However, the plans and specifications were not always perfect, and contractors individually were so tied down in their own interests in maintaining proper relations with architects that they could not use the proper leverage in most cases to have them made perfect—the trained men who were the estimators were not always well trained or perfect, and sometimes operated in great haste, thus increasing their likelihood of not doing their best.

And so to-day throughout the U.S.A. jobs everywhere were being bid upon by anywhere from two to twenty contractors; and regardless of the fact that no matter which one got the job, it would take so and so many bricks, just so much mortar, and just so much concrete, they would find that the several bidders on any one job had not, except in rare instances, arrived at the same quantities to bid upon. The several bidders were bidding on the individual quantities they had set up each for himself, and in the knowledge that all could not be right. Not long ago structures were comparatively simple, and so were the plans and specifications, provided there were any. In those days the only thing to do was to gamble on the amounts of materials required. In fact, the cube of the building told the story. There were few materials used and fewer specialities. Materials were fairly cheap. There was no such thing as cost-accounting in contracting or in any other business. It was not strange that in contracting for the erection of a structure which existed only on paper there should be a hold-over from the old conditions where the shrewdest "guesser" came out best. Neither was it strange that even to-day there was a feeling among contractors that "my way of estimating" and "my estimating department is more accurate than the other fellow's." Nevertheless, that feeling was the admission that accuracy was not prevalent.

The effect of "taking a chance" on quantity was the taking a greater chance on price. The effect of taking a greater chance on price was price reduction, or, in other words, was the basis of cut-throat competition where and as it existed among contractors. For instance, if he was bidding on a 10,000 unit quantity which he felt sure was the right quantity, and knew that his competitors were bidding on the same quantity, I should know that the unit price which he set plus the overhead and profit which I set would be what would determine whether he or someone else got the job. If he knew his unit cost was $1, his bid would be somewhere over $10,000. He would feel sure all other bids would be somewhere in the neighbourhood of his. But if he arrived at the quantity 10,000 units and was not quite sure of it, and was reasonably sure that all his competitors had figured different quantities, he could not take his unit cost of $1 and apply with profit and other items and be sure that every other bid was going to be within reasonable distance of his. The fact was he could feel pretty sure that some poor fellow was going to figure 9,000 units, and then, if his unit price was about the same as his (the speaker's), his (the other man's) bid was going to be $9,000, plus his added profit and overhead, provided he knew there was such a thing as overhead. Such was the plight of the contractor to-day who was in active competition. He had to regard the other fellow's probable gamble on quantity and meet it against his best judgment or lose. Of course, contractors would, whenever possible, bring other factors to bear, but all too often the only chance to win a contract was on price.

At first this misfortune of the contractor might be thought of as being a boon condition for the owner, who would reap the benefit of getting something done for nothing. It was not so, because it was against the principle of self-preservation for anyone to put in quantity and quality at a loss. The owner who desired, expected, or employed an architect on the assumption of trying to get more out of a contractor than the contractor was paid for fairly was his worst enemy, and seldom profited unless he was shrewd in unloading his building before it had to stand the tests of time. At first it might be thought that the architect had no direct interest in all this. He had, however, a very direct interest, because when contractors guessed on quantities rather than surveyed them, a premium was set on incomplete and sketchy plans and specifications. They could guess from them almost as well as from real good ones. But given a condition where there was careful checking, the competent architect came into his own and the incompetent was shown up. An orderly scientific procedure in any industry or affecting any profession or business was directly to the advantage of the business or profession in question.

When quantity was an established fact, then and then only could quality be effectively substituted for price as a basis for bidding. There was no question in the reasonable mind that quality should be emphasised above price. There was no one connected with the construction industry who was worthy who would not wish for this substitution as promptly as possible. But so long as quantity was gambled with, the substitution of quality for price could not be made in the wide open field. Events seemed to point out to a steadily growing realisation that the establishment of a quantity should precede bidding. Quantity surveying was yet in its infancy, but, as was characteristic of healthy infants, it was growing rapidly. The science of quantity surveying would doubtless be a potent factor in rescuing from the present widespread condition of guessing and cut-throat competition which was hurting every man and every interest in the construction industry. The ultimate rescue would be effected when the building public became imbued with the sterling idea that contractors' services should be acquired on the basis of quantity and quality, backed, of course, by price.

The Cornhill Subsidence; View showing Underside of Roadway.

THE CRASH IN CORNHILL

The work of securing and reinforcing the part of the building in Cornhill occupied by the Commercial Union Assurance Company which is regarded as safe is being continued, and there is no sign of any further collapse, while preparations for demolishing what are regarded as the unsafe parts are proceeding.

Progress is also being made by the Post Office staff with the work of laying new telephone cables in place of those affected by the subsidence. The Commercial Union Assurance Company have now received various reports from experts, including, it is understood, the report of Sir Aston Webb, with regard to the state of the standing part of their building in Cornhill, and a meeting of the board of directors is to be held this week to consider the position. It is probable that a decision will then be reached as to what is to be done in view of the subsidence and of the state of the foundations of the building. The closing to traffic of this part of Cornhill has caused much congestion in other thoroughfares, and this is likely to continue for at least two months.

In a letter to the *Morning Post*, Professor A. E. Richardson, F.R.I.B.A., makes some observations as to the probable cause of the fall. He says: "So far as recent rebuildings in the City and the West End are concerned, it can be said that these are models of sound construction, unrivalled in any other capital city. Every new building, or alteration, projected within the Metropolitan area has to conform to the requirements of the London Building Act. In addition the plans have to meet with the approval of either the City Corporation, or the London County Council. The practice of reconstructing rafts of reinforced concrete, over the entire site, is now almost universal, and providing the walls of adjoining buildings and excavations are properly shored the risks from subsidence are reduced to a minimum. Excavating for new foundations in proximity to existing buildings, or underpinning old walls on an extensive scale, naturally involves greater risk, but with the precautions taken to-day the failures are notoriously few. Building operations in the City of London

are among the most difficult of the problems of modern building practice. The sites are awkward and frequently 'made ground' is encountered, a legacy of the universal levelling up with debris after the Great Fire. Another detrimental factor is the existence of old cellarage and valtings, which extend under the pavements and roadways. Where new buildings are in progress these old cellars are subjected to entire reconstruction.

"The increased volume of traffic, combined with the greater axle weights, as well as the vibration due to the loads carried at high speeds, unquestionably affects houses with frontages to main roads."

AMERICAN WAR MEMORIAL, EDINBURGH

A memorial to Scottish soldiers who fell in the war, which has been subscribed to by Scotsmen in the United States, will be unveiled in Princes-street Gardens in September, and was illustrated in our last issue. It is the work of Mr. R. Tait Mackenzie, a Canadian artist, born of Scottish parents in Ontario in 1867. As major in the medical service, Tait Mackenzie saw much of the effects of the war on men in England, Scotland, Ireland, and Canada, for he was a doctor before he was a sculptor.

To the composite and correct statement of the result of his studies he has added (writes a correspondent) a beauty of presentment which is neither Greek idealism nor modern realism, but combines some of the graces of the former with some of the latter.

In the bronze central figure of the memorial he has given a new view of his powers. It is an expression of feeling, of spirituality. It is a static figure, seated, rifle on knees, not yet, however, fully accoutred, but ready. The dignity of the figure is enhanced by the simple architectural setting in Craigleith stone by Mr. Reginald Fairlie, A.R.S.A., which provides seats and a position for a bronze relief which is a prominent feature of the memorial. This frieze is in three sections. The first is a representation of "the pipes"; the second a recruiting party, the vigorous marching movement of which is followed by the less regular and less spectacular body of recruits, each displaying the symbol of the trade from which he is derived. The third section is notable for its human feeling. The whole frieze is highly pictorial, and the sculptor has taken care to introduce into it all the drama which its subject offers.

Midland Building Trades Exhibition.

This exhibition will be held in the Bingley Hall, Birmingham, from September 5 to September 17. The allocation of stands is in the hands of the general manager, Birmingham and Midland Building and Allied Trades Exhibition, Chamber of Commerce, Birmingham, Press Director's office, 65, Chancery Lane, London, W.C.2. We hope to publish a special report on the exhibition.

A Disclaimer.

Messrs. John Greenwood, Ltd., of 12 and 14, Arthur-street, London Bridge, write to inform us that they are in no way associated with the carrying out of work on the premises in Beak-street, W., where a collapse occurred some short time ago.

PUDSEY HOUSING SCHEME

Houses to let at 5s per week.

We illustrate below drawings of the South royd Housing Scheme for the Borough Pudsey, the chief interest of which is tha the houses are being erected to let at 5s. pe week. The following details are of interest:-

Cost per house, £320, exclusive of lan streets and sewers.

Rent, 5s. per week, exclusive of rate 25 per cent. allowed for repairs, empties an collection.

Method of Construction.

Built in blocks of six houses.

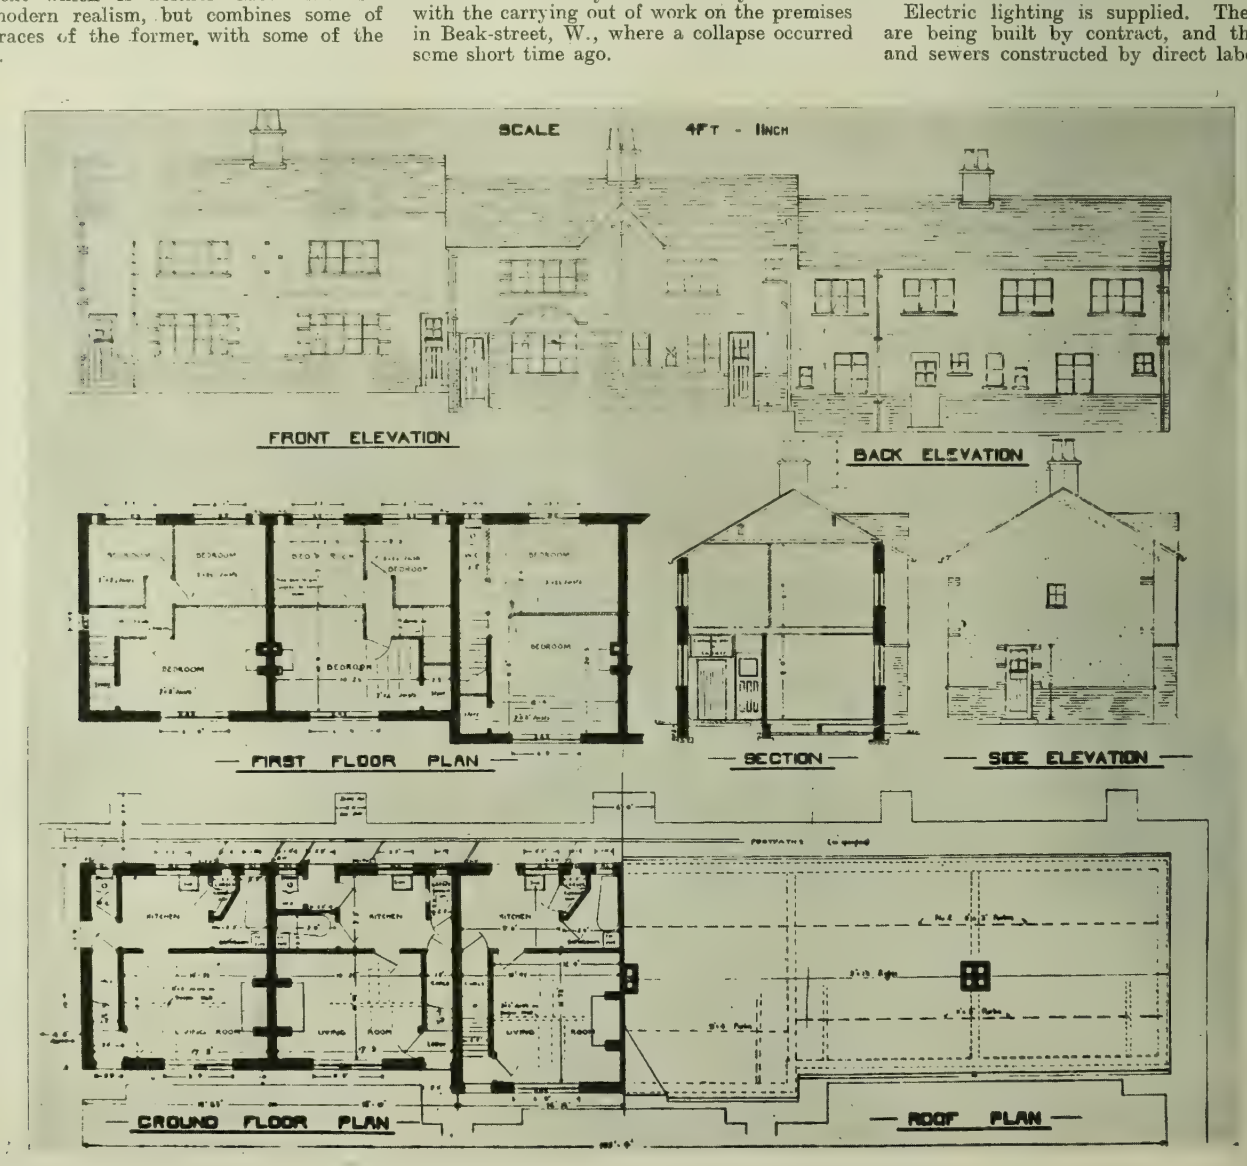
Floor area per house, 620 super feet.

External walls, 11-in. hollow brick wal and pebble dashed from sill height (groun floor).

Internal walls, 4½ in. brick (ground floor Plaster slabs (first floor).

Metal casements in wood frames.

Roof covered with Courtrai-Du-Nord tile



Asphalt garden paths and wood fencing.

Accommodation.

Ground floor.—Living room 14 ft. 2 in. b 10 ft. 4 in., with York range. Kitche 7 ft. 3 in. by 8 ft. 3 in., with sink and elec tric wash boiler. Larder 2 ft. 3 in. by 4 f Bathroom 3 ft. 5 in. by 5 ft. 9 in. Coal under stairs. W.C. 2 ft. 9 in. by 3 ft. 6 in

First floor.—Bedroom 1, 10 ft. by 11 ft. 6 in (average), with fireplace. Bedroom 7 ft. 9 in. by 8 ft. 9 in. Bedroom 3, 8 ft. 3 in by 7 ft. 9 in. (average). Store cupboard 2 ft. 8 in. over stairs.

Electric lighting is supplied. The house are being built by contract, and the road and sewers constructed by direct labour.

Southroyd Housing Scheme for the Borough of Pudsey.

THE BRITISH ARCHÆOLOGICAL ASSOCIATION

EXETER CONGRESS—I.

This venerable and senior of the peripatetic institutions, which branches off from the Society of Antiquaries, has just been holding its eighty-fourth annual congress, and the ancient city of Exeter had been chosen as the inviting centre of its operations. The Association was founded in 1843. Some of its founders deemed that the older body needed some enlivening. In its early days a medal was struck to commemorate its congresses. The first bears the arms of Canterbury, in which city they held their assembly, and on the reverse is represented the lamp of the Society of Antiquaries, and an audacious hand is shown pouring in a fresh supply of oil. The new body was intended to be an auxiliary to the old; but antiquarians have been known to dispute among themselves, and a little later on there was another exodus, and the Archæological Institute, which has attained to the epithet of "Royal," was formed, and has done excellent work in stimulating the study of antiquities throughout the country. With the help of these bodies, local antiquarian societies have been formed almost in every county, possessing its own experts. At first the visiting societies played the rôle of instructors, but in these more enlightened days when the knowledge of archæology is so widely spread, the Association and the Institute come more often as learners, although they are able frequently by expert knowledge and experience to correct errors and supply information.

No more delightful county could be selected for exploration than Devon. "Glorious Devon" its inhabitants love to call it, and it is no vain eulogy. Exeter itself is a wonderful city replete with interesting objects. The shire can boast of magnificent churches with splendid roodscreens and noble towers, of magnificent scenery, its coast-line dotted with beautiful seaport towns, its glorious wild moorland range of Dartmoor with its prehistoric remains of its earliest dwellers, to the study of which one at least of our company of lecturers had devoted his life, and not exhausted their treasures.

Moreover, Exeter and its neighbourhood are rich in learning. Many patriotic citizens have studied deeply the lore of their native shire. They have ransacked the charters and ancient documents, of which there is a fine collection in the muniment-room of the Corporation and in the Cathedral library, and have sought for information in original manuscript sources. The Town Clerk of the Corporation, the Cathedral dignitaries, and the Professors of the university college of the West, all are experts, and many others have delved deep in local lore. Moreover, Devon folk are "given to hospitality," and the members of the Association who were privileged to attend the Congress will long remember the many kindnesses they received from their generous hosts and hostesses. One notable instance may be mentioned here. The Mayor of Exeter, Colonel Ransom Pickard, C.B., C.M.G., and the Sheriff, Mr. H. T. Michelmore, held a reception in honour of the Congress, and invited a thousand guests to meet the members.

The Congress was held under the Presidency of Mr. Charles Edward Keyser, M.A., F.S.A., who has been President of the Association for twenty-two years, and has done much to support it during all that long period. It may well be said that without his aid it could scarcely have survived during the trying years of the war and at other periods of its existence. Mr. F. R. Rowley, curator of the Royal Albert Memorial Museum, was an energetic and valuable local secretary. Upon the Hon. Secretary, Mr. E. Reginald Taylor, F.S.A., the bulk of the labour fell in organising the Congress, and he was ably assisted by the Hon. Treasurer, Mr. Francis Weston. With a strong local committee, headed by the Mayor, the success of the Congress was assured.

Monday, June 27.

The members, who numbered about sixty, journeyed down to Exeter, and on arrival they found their way to the Guildhall, where they were welcomed by the Mayor and Mayoress, several Aldermen of the City, and other ladies and gentlemen. The Mayor, opening the proceedings, welcomed the Congress to the City, and the President suitably replied. The attention of the company was directed to the Guildhall itself, a noble room of much interest. It is lined with elaborate oaken panelling emblazoned with the arms of the mayors, benefactors, and city companies, and has a fine open timber roof which is adorned with various ornaments showing the badge of Earl Warwick, the King-maker, the bear and ragged staff. The Earl visited the City in 1469 in support of Henry VI. The roof is supported on corbels carved into grotesque beasts. There was a Guildhall at Exeter in early times.

The present building was erected in 1330,

Branscombe Church.

re-roofed in 1466, and the oaken wainscoting was added in 1556, and twenty years later the Court of Hustings, with seats for the Mayor and Aldermen, were constructed. The dignified seat of the Mayor bears the date 1697. The entrance to the building is interesting. Formerly, prior to the Reformation, in front of the Hall was a chantry chapel dedicated to St. George and St. John Baptist When chantries were abolished, the chapel fell into decay, and the citizens determined to construct a more worthy entrance to their Hall. So they built a Loggia and chambers over it in French Renaissance style in 1593. The old chapel bell is preserved in the turret and was rung when fires occurred, and is inscribed: *Celi Regina me protege queso ruina.* There are some fine portraits in the Hall, conspicuous amongst which is that of the Princess Henrietta, daughter of Charles I, by Sir Peter Lely, presented by Charles II. The Princess was born in the City at Bedford House. The same artist's portrait of General Monk, a native of Devon, hangs in the Hall, and also one of George II by a native artist, Thomas Hudson. Other artists are represented, including Sharland, Northcote, R. E. Payne, and Leaky. The City arms frequently appear in the decorations bearing the proud motto *Semper Fidelis* granted to the City by Queen Elizabeth in token of the ever-faithfulness of the citizens to the Royal cause manifested throughout the centuries of English history.

The party then adjourned to

The Priory of St. Nicholas,

a most interesting building which has a long history. Miss Rose Graham, F.S.A., who is a great authority on monastic records, read a paper on the story of the Priory, and the buildings were described by Mr. Tonar, an Exeter architect. This Benedictine monastery was built on the foundations of pre-Norman work. Gytha, the widow of Earl Godwin and mother of King Harold, made a gift of her dower lands to the church, and William the Conqueror bestowed them on his newly founded Abbey of Battle, erected on the spot where Harold died during the Battle of Senlac. The Conqueror sent a colony of monks from Battle to Exeter to control the property, and in the reign of William Rufus they built a new monastery and church dedicated to St. Nicholas about the year 1089. Some portions of the former building are still standing. The City and the Cathedral archives are rich in records relating to the Priory. The earliest existing deed is a confirmation by Bishop Osbern (1073-1104) of a grant of the land of Pochelie and the Church of the same vill to the Church of St. Nicholas by Rualandus Ladubed on the day he became a monk in the same Church. The Bishop of Exeter and the Cathedral clergy regarded the newcomer with no friendly eye, and there was much opposition. Archbishop Anselm in 1103 wrote a letter to Bishop Osbern bidding him to shelter the monks from all molestation on the part of his clerics, and rebuking him for hindering the monks from ringing their bells. King John granted to the monks a moiety of Lammas Fair and also the right to hold an annual fair. There were constant disputes between the Priory and the City. In 1535 the monastery was suppressed. The women of Exeter protested vigorously against the pulling down of the Rood-loft, and threw stones at the despoilers. The stones of the Priory were used for the repairing of the city walls and the rebuilding of the Exe bridge.

Much of the property was bought by the Corporation, and the Mayor, William Hurst, converted some part of the buildings into a dwelling-house for himself. In the present Tudor room there is a fine decorated ceiling which he constructed. The property gradually passed out of the possession of the City authorities, and it was not until 1913 that the building was purchased by the Corporation, and the work of restoration was admirably accomplished by Mr. Lewis Tonar, the party's cicerone, with the advice of Mr. Harold Brakspear, F.S.A. The whole work has been excellently done. A good plan of the buildings has been prepared by the two architects, not without difficulty, as much of the site has been covered with modern buildings. The site of the minster was on the south of the cloister court, and on the east was the chapter house, where now a school stands, the playground of which is the site of the cloister. Over the chapter was the dorter or sleeping-place of the monks. On the north stood the frater, part of which remains, but it is in private hands, and we were unable to visit it. It would be an advantage if this could be purchased by the Corporation and added to the rest of their property. We enter the monastic buildings through the doorway, which formerly led into the north-west corner of the cloisters and is of thirteenth-century date, and find ourselves in a Hall with a fine Beer stone arch and the beautiful sixteenth-century ceiling already mentioned, the work of the good Mayor William Hurst. Some capitals and bases of Purbeck marble are arranged here and came from the cloisters, and formed part of a circular lavatorium, where the monks washed their hands and faces before they entered the frater or refectory. This was thirteenth-century work, and only four other examples of this kind are known to have existed in this country, viz., at Durham, Canterbury, Lewes, and Much Wenlock.

The so-called "Crypt," or undercroft, with its Norman columns and diagonal

vaulting, is one of the most interesting features of the Priory, and dates from about 1100. Other chambers are the kitchen, with its large fireplaces, rebuilt in the thirteenth century, the Great Hall on the first floor, where we assembled to hear the papers read, of fifteenth century date, the walls of which were decorated in Queen Elizabeth's time with black and white arabesque designs; the Prior's solar, the Prior's cell, the Guest Rooms, the Guest Master's cell, and the servants' lodging over the kitchen. Outside there is a very interesting Saxon cross granite shaft covered with interlacing scroll diaper work, which has had many adventures. After the dissolution it was taken to repair the Exe bridge. It was imbedded in a cut-water. When the bridge was destroyed in 1778 it was bought by one William Natin and used as a kerbstone against the corner of his house in High-street. In 1910 the City Council removed it to the City Museum, whereon it was taken and restored to its ancient home at the Priory.

The company then returned to the Guild-hall, where they were entertained to tea by the Mayor. Then the Town Clerk, Mr. H. Lloyd Parry, gave an address on the City Regalia and the Records. Of these the citizens of Exeter may be justly proud. Mr. Lloyd Parry exhibited the civic plate. The insignia consists of four maces, two swords of State, a cap of maintenance, a mayor's chain and badge, a sheriff's chain and badge, four chains for the sergeants-at-mace, a loving cup, and a salver. The oldest sword was given by Edward IV when he visited the City in 1470, "to be carried before the Mayor on all public occasions." The sheath is wrapped in crepe, the sword having been put into mourning at the Restoration in memory of Charles 1. Henry VII gave the other sword on his visit in 1497 after his victory over Perkin Warbeck, when "he having thanked the citizens for their faithful and valiant service done against the rebels, promised them the fulness of his favour, and gave them a sword taken from his own side, and also a cap of maintenance, commanding that for the future in all public places within the said City the same shall be borne before the Mayor as for a like purpose his noble predecessor King Edward the Fourth had done." The cap, which is of black beaver, is preserved inside the embroidered crimson velvet cover made about 1634. The Mayor's chain is of interest, as it was presented in 1874 by the members of the Royal Archæological Institute, in recognition of their reception during the Congress held in the City in 1873. The Shrievalty of the City was instituted in 1517, which date appears on the Sheriff's chain, which was presented in 1876. The silver chains of the Sergeants date from 1500, the alternate links bearing the letters X and R, a rebus on "Exeter." The seals of the City are ancient and extraordinarily interesting. Mr. Lloyd Parry exhibited several, the oldest dating from 1170, and said to be the oldest municipal seal in the Kingdom. He also stated that no other city can compete with Exeter as regards its ancient records and documents, except, perhaps, Norwich. There were fifty royal charters, dating from Henry II's time onwards. The Records were complete. In the time of Queen Elizabeth, John Hooker, Chamberlain of Exeter, calendared them, and they have been kept regularly ever since. Space prevents us from giving a résumé of the Town Clerk's admirable lecture. The Records have been published by the Historical Manuscript Commission in 1916, and occupy some 536 pages, and may be consulted by those of our readers who desire to pursue further investigations into the history of the "Faithful City."

Tuesday.

An early start was made on this day, and the cars and char-à-bancs were in readiness for a long day's drive at 9 a.m. This included a memorable excursion over the glorious, wild country of Dartmoor. The party passed through Moretonhampstead, situated on the edge of Dartmoor, which has a Perpendicular church, not of much interest, and a row of seventeenth-century granite arcaded houses, formerly the poor-house. An old cross and elm tree stand at the entrance to the church. It may be noted that there is a manor in this parish called Daccombe, which was given by William de Tracey, one of the murderers of Becket, to the church of Canterbury, to which it still belongs, to make amends for his crime. The foot of the hill on which Grims-pound stands being reached, this was admirably described by the Rev. Prebendary Chanter, and is a remarkable prehistoric, antiquarian curiosity which has puzzled many archæologists. It is believed to have been a place of refuge for the scattered population of the district in Neolithic times, and probably never completed. It is a rude circular enclosure, about four acres in area, surrounded by a double wall of stones, originally 5 to 6 ft. high, the space between the two walls varying from 3 ft. to 14 ft. Within these walls are some 20 circular enclosures, 12 of them being huts, the remainder cattle pens. A stiff climb was necessary to reach Grims-pound. The whole district is full of prehistoric antiquities, and some of the party wished to explore the Dartmoor hut-circles just north of Grims-

War Memorial Cross, Buckland Churchyard.

pound on Hootnor Tor and Bennet's cross, the clapper bridges at Portbridge and the two Bridges, and near Merivale Bridge hut-circles, menhirs and stone avenues, some of which were described by Mr. E. Hansford Worth, F.G.S., in his lecture on "The Prehistoric Remains on Dartmoor" on the last evening of the Congress.

The next stopping-place was Tavistock, an old-world town which has derived wealth from its mines of tin and copper, and formerly from its clothiers. Tavistock kerseys were reckoned to be the best in the kingdom. But its importance was due to the famous Abbey, whose Abbot ruled the borough with much authority and was a great man. It was a mitred abbey, independent of Bishop or Archbishop by the decree of Pope Leo X, and the great church was deemed almost of equal importance to the cathedrals of Wells or Exeter. Mr. Harbottle Read, F.R.I.B.A., the party's "guide, philosopher and friend" on so many occasions, described the church and abbey.

The church is dedicated to St. Eustace (Eustacius), who corresponds with St. Hubert. It is a typical Devon church, of late Perpendicular style of the time of Henry VII, except the base of the tower, which is Decorated. The tower is 106 ft. high, with buttresses, battlemented parapet and pinnacles, and is pierced with arches on all four sides, so that it rests on piers and is a true campanile, and was never joined to the church. Abbot Cullyng (1380) completed it. The piers and arches of the church are of granite. Some bones of great size are preserved here, said to be those of Ordulf, founder of the Abbey with his father Ordgar, who was a man of immense size and strength, about whom several stories are told. The church is a large, fine building, with aisles extending to the extreme end of the church. Some of the treasures were exhibited: some immense old pewter flagons (1620-1627), old churchwardens' accounts which contain an early record of 1380. The Register reveals the visitation of a great Plague in 1626, when many died. There is a curious chest, believed to be Spanish, in the shape of a cope chest, but too small for that purpose, some old panels, and a fine collection of church plate. There are some richly adorned tombs of the Fitz family (1580), the Granvils, and Lord Godolphin.

The Abbey was founded in A.D. 960 by Ordgar, "Ealderman," or Earl of Devon, and completed by his son Ordulf. This was burned by the Danes. It was rebuilt by the second Abbot Lyfing, the friend of Cnut. At the Dissolution the property was granted to John Lord Russell, whose descendant, the Duke of Bedford, now holds it. The only remains of this once rich and powerful Abbey are two arches in the churchyard, part of the cloisters, some tiles buried 10 ft. below the ground, the gateway to the Abbey, with a room now used as a public library, a small tower adjoining the archway, a porch with pinnacles at the back of the hotel, the Mill-house of the monks, and Betsy Grimbal's tower (so called from a legend that a young woman was murdered in it), and some ruinous ivy-clad walls and arches. There are two arches in the churchyard, one perhaps the lavatorium of the monks. These remains are all of Perpendicular date. There is the beautiful fragment of a tomb in the churchyard of thirteenth-century date, possibly the memorial of the founder. Part of the Abbey is occupied by the Bedford Hotel, built as the residence of one Saunders of "barbarous memory," since he destroyed the fine chapter-house, described by Leland as circular, with 46 arches and 36 niches for seats, for this purpose. In the garden of the vicarage are some Roman stones and two large erect cross-shafts.

(To be continued.)

Public Amenities in Scotland.

The King has, on the recommendation of the Secretary of State for Scotland, approved the appointment of a Royal Commission to inquire into such questions of public amenity or of artistic importance relating to Scotland as may be referred to them by any of the Departments of State, and to report thereon to such Department, and to give advice on similar questions when so requested by public or quasi-public bodies, where it appears to the Commission that their assistance would be advantageous.

The Commission will be constituted as follows:—

Sir John M. Stirling-Maxwell, Bt., T.D., F.S.A. (chairman).

Lord Hamilton of Dalzell, K.T., C.V.O., M.C.

Sir John R. Findlay, Bt., K.B.E., F.R.S.E.

Sir George Macdonald, K.C.B., LL.D., F.B.A.

Sir George Washington Browne, P.R.S.A.

Sir Robert S. Lorimer, A.R.A., R.S.A., F.R.I.B.A.

Mr. J. Whitelaw Hamilton, R.S.A., R.S.W.

Mr. J. Pittendrigh Macgillivray, R.S.A., LL.D.

Mr. Stanley Cursiter, O.B.E., Keeper of the National Gallery, Edinburgh, will act as secretary to the Commission.

THE LONDON BUILDING ACTS AND THEIR APPLICATION—XXIV.

By H. V. MILNES EMERSON, A.R.I.B.A.

Regulations (*Continued*).

The seats shall not be spaced less than 2 ft. 4 in. back to back, not less than 20 in. wide, and the space or passageway between the perpends of the back of one seat and the front of the adjoining seat shall not be less than 1 ft. The seats to be firmly fixed to the floor, and tip-up seats to be automatically actuated by weights.

Note.—If the seats are fixed to other than wood floors the fixing fillets must be securely fixed to the solid floor. Much trouble has been experienced by the seats working loose. If the ground-floor seats are placed in curved rows, the floor should be benched in order that the rows of seats are level, otherwise the ends of the rows will follow the plane of the sloping floor.

The operating room (large enough to take two machines) should adjoin the rewinding room and must also have direct access and ventilation to the open air. This can be provided by means of an open area.

Water-closets may be required for the public as follows:—Males, one for 200, two for 500, three for 1,000, and one for every additional 500. Females: one for 100, two for 250, three for 500, and one for every additional 400.

In theatres and music-halls one urinal must be provided for each fifty males, and in dancing halls, concert halls, restaurants, and cinemas one urinal for each hundred males. Separate lavatory accommodation must be provided for the staff.

Ventilation, lighting, heating, hydrants, etc., must be installed in accordance with the requirements of the Council, who have the right from time to time in any special case to modify or dispense with these regulations.

The approval by the Council of any plans for the purpose of these regulations must not be deemed to derogate from the Council's powers under any other Act or regulations or from the powers of the District Surveyor or the local authority or any other authority to deal with the premises under any powers which may be vested in them.

The rules which are required to be observed by licensees in connection with the management of the premises also deal in some respects with the arrangement of the premises, and contain a requirement as to the relative position of the picture-screen and the seating in cinematograph halls in order to prevent eye-strain.

The best type of cinematograph hall in order to prevent eye-strain, more particularly near the screen, is one which diminishes in width from back of the hall to the screen end. The floor for about 15 to 20 ft. from the proscenium or screen should have a gentle rise towards the screen instead of being flat or following the general fall of the floor.

Part VII.

Special and Temporary Buildings and Wooden Structures.

Section 82.—(1) Where a builder is desirous of erecting an iron building or structure, or any other building or structure to which the general provisions of Part VI of this Act are inapplicable or in the opinion of the Council inappropriate having regard to the special purpose for which the building or structure is designed and actually used, he shall make an application to the Council accompanied by a plan of the proposed building with such particulars as to the construction thereof as may be required by the Council.

(2) The Council if satisfied with such plan and particulars shall signify their approval of the same in writing and thereupon the building may be constructed according to such plan and particulars, but the Council shall not authorise any building of the warehouse class to be erected of greater cubical extent than 250,000 cub. ft. except in accordance with the foregoing provisions of this Act.

Subsections 3, 4, and 5 relate to application, expenses, and deposit of plans.

Note.—Under this section application can be made to the Council for the erection of buildings (other than domestic buildings) with materials other than those prescribed in Part VI of the Act. Such buildings may be permanent or temporary at the discretion of the Council, and if temporary the buildings must be removed at the expiration of the licence unless same has been renewed by the Council.

Under the First Schedule, every building, unless sanctioned in accordance with this Act, shall be enclosed with walls constructed of brick, stone, or other hard and incombustible substances, etc.; but it has been held that walls made of wooden posts attached to a wooden frame and covered on the outside by a skin of iron are not walls of incombustible material. The District Surveyor has power to approve the erection of open sheds, not exceeding 16 ft. high and four squares in area, in any manner and of any substances.

Domestic or other buildings (not being public buildings) can be erected of any materials and without consent of the Council provided such buildings do not exceed 30 ft. in height as measured from the footings of the walls, do not exceed 125,000 cub. ft., and are distant not less than 8 ft. from the nearest street or way and at least 30 ft. from the nearest building and from the land of the adjoining owner. If the building exceeds 125,000 cub. ft. and does not exceed 250,000 it shall be not less than 30 ft. from the nearest street or way, and at least 60 ft. from the nearest buildings and from the land of the adjoining owner.

Section 83.—This section provides for the removal of a temporary building when the licence expires.

Section 84.—(1) No person shall set up in any place any wooden structure unless it be exempt from the operation of this Part of this Act except hoarding enclosing vacant land and not exceeding in any part 12 ft. in height without having first obtained for that purpose a licence from the Council and the licence may contain such conditions with respect to the structure and the time for which it is to be permitted to continue in the said place as the Council think expedient.

(2) Provided that a licence shall not be required in the case of any wooden structure of a movable or temporary character erected by a builder for his use during the construction, alteration or repair of any building unless the same is not taken down or removed immediately after such construction, alteration or repair.

Provided that this section shall not extend to or apply within the City or to any hoarding duly licensed by the local authority under any statutory powers in that behalf.

Note.—This section does not apply to domestic or other buildings erected in accordance with the provisions quoted in the latter part of the notes to section 82.

Application for licence under this section must be made to the local authority instead of the L.C.C., but the District Surveyor is entitled to charge his fees, it having been held that the powers, duties and liabilities of district surveyors in respect to supervision of wooden structures remain under this section, but that they have no powers, duties or liabilities arising under the licences granted by the local authority (87 L.T. 326) City of Westminster *v.* Watson and Others. From this case it appears that the district surveyor's duties terminate with his approval that the wooden structure has been properly erected. A large number of these special or temporary structures being erected are in form of garages now.

Wooden stands for viewing processions, etc., have been held to be wooden structures, and consent must be obtained from the local authority for their erection, and they must be erected to the satisfaction of the district surveyor (City of Westminster *v.* L.C.C. (1902), 86 L.T. 53).

Wooden structures erected by a builder for use during the construction, etc., of a building or in the development of an estate do not require a licence, and they need not necessarily be moved from one position to another as one or more buildings comprising that estate are completed, even if the temporary wooden structure which has been erected stands upon the ground of a completed building, but such structure must be removed upon completion of building operations upon the estate.

Section 85.—This Part of this Act shall not apply in the case of a pile, stack or store of timber not being a structure affixed or fastened to the ground.

Note.—For the information of contractors the section (197) dealing with the storage of timber is briefly quoted.

It shall not be lawful to erect a pile, stack or store of cut or uncut timber, etc., on or above ground, nearer to a street than the buildings forming the general building line.

Furnaces must be enclosed in a fire-resisting building, and must be 10 ft. away from any stack, etc.

Such stacks, etc., must not exceed 60 ft. in height. Passageways only are allowed through the stack.

Railway and canal companies are exempt.

Section 86.—Structures or erections erected or set up upon the premises of any railway company, and used for the purpose of or in connection with the traffic of such railway company, shall be exempt from the operation of this Part of the Act.

Note.—Under section 201, railway companies are exempt from Parts VI and VII of this Act, but this section was no doubt introduced here owing to a decision that a coal office for the sale of coal (conveyed over the railway system) by a firm of coal merchants was a structure used in connection with the traffic of a railway company.

Wooden structures, such as bungalows erected and exposed for exhibition or sale by the makers, are also exempted from subsection 2, section 84.

Part VIII.

Rights of Building and Adjoining Owners. Sections 87 to 101, inclusive.

This Part of the Act has been dealt with so fully in the articles, "Party Walls: Practice and Decisions," by Mr. J. Douglas Scott, A.R.I.B.A., which appeared in early issues this year, that it is unnecessary to add any further comments upon this Part of the Act.

Part IX.

Dangerous and Neglected Structures.

Section 102.—In this Part of this Act the expression structure includes any building, wall, or other structure, and anything affixed to or projecting from any building, wall, or other structure.

Section 103.—This section provides for the survey by the District Surveyor, or some other competent surveyor, of any structure which has been reported or believed to be by the Council in a dangerous state.

Note.—It has been held that the duties of the Council under this section are ministerial, that the work may be delegated to one of their officers by the governing body, and that notice can be served on the owner to carry out the necessary work without the case coming specially before a meeting of the Council for their consideration (L.C.C. *v.* Hobbis (1897), 75 L.T. 687).

Section 104.—Under this section, structures

within the City come under the authority of the Corporation of the City of London, and a surveyor is specially appointed to deal with dangerous structures within that area.

Section 105.—Upon the completion of his survey, the district surveyor employed shall certify to the Council his opinion as to the state of the structure.

Section 106.—If the certificate . . . is to the effect that the structure is in a dangerous state, the Council may cause same to be shored up . . . secured, taken down, or repaired, as the case requires.

Note.—It has been held that where there is a possibility of danger to any person, not necessarily to passengers or passers-by, or property, it is sufficient to be dealt with as a dangerous structure (L.C.C. *v.* Herring (1894), 10 T.L.R. 509).

A decayed and neglected structure, of possible danger to any person, even if unlawfully upon the premises, comes within the Act (L.C.C. *v.* Jones (1912), 2 K.B. 504).

A lessor cannot compel a lessee to rebuild any portion of a building that has been pulled down under a dangerous structure order, if such rebuilding contravenes this Act, and the lessee can reconstruct such work in any other way in order to comply with the Act (Wright *v.* Lawson (1903), 68 T.P. 34).

It has been held in an action for damages for injury caused by a falling balcony that a landlord is not liable to his tenant for such damages unless the landlord has agreed to repair and received notice of want of repair (Tredway *v.* Machin (1904), 91 L.T. 310).

The Council must give notice to the owner or occupier of the structure to be taken down, etc., as the case may be, but it is not necessary to serve all owners.

Sections 188 and 196 deal with notices.

OBITUARY

Charles E. Deacon, F.R.I.B.A.

We take the following extracts from an obituary notice contributed by Mr. Hastwell Grayson to the R.I.B.A. Journal:—

Mr. Deacon, who died on July 3rd at the age of 83, was the last survivor in the Liverpool district of architects who were directly influenced by the Gothic revival. Educated at Lancaster, articled to Sir James Picton, he became assistant to Sir William Emerson, commenced practice in 1870 and worked until the day of his death fifty-seven years later. He became a Fellow in 1891. A beautiful draughtsman, a clever colourist, his happiest hours were spent with pencil and palette working away at Gothic detail. Oak reredoses, stalls and screens he designed by the score; perhaps he enjoyed designing woodwork more than churches. . . . Of his numerous churches, Mr. Deacon considered his happiest efforts St. Dunstan's, Liverpool, St. Columba's, Egremont, and St. Stephen's, Prenton. A special effort was made in planning Prenton Church to give a view of the Sanctuary, the pulpit and lectern from all sittings. The exceptional height of the aisle windows and the arcade has allowed the omission of clerestory windows. Windows in the north and south of the Sanctuary, invisible from the nave, are most effective. The church is brick in and out. During the last few years Mr. Deacon made an effort in his church fittings to get away from traditional motifs and detail. At his great age this showed versatility and determination. He built numerous schools for Liverpool, Cheshire County and Birkenhead. . . . His most prominent building is the offices of the Liverpool Education Committee facing the Municipal Buildings. The façade is typical of many others erected thirty years ago. In spite of a lack of rhythm, too much petty detail and an uneasy outline caused by three elaborate gables in a street where a horizontal skyline is universal, there is undoubtedly an appropriate civic character.

ARCHITECTS' & BUILDERS' INQUIRY BUREAU

We are glad to give questions and answers, but cannot accept responsibility for contributed replies, especially on legal matters.

May we appeal to our correspondents to submit their queries on paper of a size easily filed, and written as legibly as possible, or, better still, in typewriting?—Ed.

Artificial Stone.

[Reply to "Surveyor," August 5.]

Sir,—We are glad to note that "Surveyor" recognises that to measure this material in a sensible manner is the right way to deal with it in a bill of quantities. As the general contractor usually has to fix the stone, measurements of some sort must be given in the quantities, and if the measurements are taken properly only one person's time is employed and a complete purpose is achieved.

We think "Estimator" has touched the spot in referring to "The Standard Method of Measurement of Building Works." In any case it is the surveyor's job to do all necessary measuring, and if new materials require new methods, or even new rates of payment for measuring, it is "up to" the profession to adapt themselves to new conditions, just as we on the practical side have to do.

Whilst the difference between making one artificial stone and fifty may be greater than the difference between one natural stone and fifty, it is incorrect to state that the labours in the case of masonry are the same for each stone. It is a fundamental law that it costs more to make the first of any article than each of a quantity, and when machinery is employed, as it would be in the case cited by your correspondent, the difference is greater than when made entirely by hand. The initial cost of setting out and cutting the mould pattern, of shaping the tools and setting up the machine would be the same for working one cornice stone as for working a run of a hundred stones. These factors, whatever the class of material under consideration, are taken into account by the person who prices the bill, and in our opinion should have no influence on the methods of the quantity surveyor. "Builders."

Building Estates.

Sir,—In certain estates in which the roads are metalled and sewered before they have been taken over by the local authority, and the cost thereof apportioned between the various owners by the estate surveyor, has the latter's ruling upon the matter of apportionment the same weight which that of a surveyor to the local authority has in cases where the roads have been already taken over? Is there an appeal other than by litigation? Houseowner.

Dampcourse.

Sir,—Is there a satisfactory alternative to the costly process of cutting in and inserting a dampcourse in damp old walls? I feel that if such an alternative could be found a good many old properties which are condemned as not worth the cost of reinstatement would be saved. Architect.

Dowelled Doors.

Sir,—Have any of your readers experienced any unsatisfactory results from the use of manufactured doors which are dowelled together instead of framed in the old-fashioned way? A lot of these doors look very nice, but are they as strong and lasting?

Conservative.

Dampness in Floors.

[Reply to Mr. L. E. Walker, August 12.]

Sir,—Mr. Walker's notes upon this subject seem so sound and thorough that it may be a presumption to criticise. The only point I would question is the insertion of a horizontal dampcourse through the walls after having carried up vertical damp courses to above floor level. My experience in reinstating old buildings, particularly where there is no dampcourse, is that if a waterproofed vertical dampcourse is constructed on the inside face of all walls to a height of 3 ft., and a width of 3 ft., of the surface concrete similarly waterproofed, there is no need to go to the expense of inserting a dampcourse through the thickness of the walls, since experience seems to indicate 3 ft. as the limit to which water can be sucked up by capillary attraction.

Restoration.

[Reply to T. H., August 5.]

Sir,—If there is no concrete raft beneath the building, and a horizontal dampcourse throughout the thickness of the walls below the floors has been omitted, the most perfect system of ordinary ventilation of the floor would be ineffectual. If you wish to save expense, I would advise, after cutting off the plastering from the lower portion of the rooms, the rendering of the same in Portland cement, with a second coat in rough stucco. This treatment should prevent dampness entering the rooms, whilst the stucco coat is intended to meet the difficulty of internal condensation. The best remedy, of course, in addition to what has been above recommended, would be the laying of a concrete raft under the building, the cutting-in of a dampcourse throughout the breadth and length of the walls, and the proper ventilation of the floor timbers. The work, however, should be done to a very skilfully prepared specification, suited to the conditions of the case, after a careful examination of the building.

L. E. Walker.

English Oak.

[Reply to "Restorer," July 22.]

Sir,—In reading "Restorer's" letter, one is likely to feel that he is anxious to throw the entire responsibility on the builder's shoulders. He could do the same to the merchant, the merchant to the gentleman who felled the tree, he to the tree itself, the tree to the acorn, etc. Another method might be for "Restorer" to examine the beam before it is fixed, or get an expert to do it for him. Honour and Arms.

Dampness Behind Glass.

Sir,—Could you suggest some remedy for dampness behind the glass to a set of aquatints? They are hung on both inside and outside walls, mostly on the old timbers, and not touching the actual plaster, but where this is the case, rubber studs have been fixed to the frames. The house is a very old one, timbered and thatched, with no sign of dampness in any of the walls; the room is well ventilated, but this sweating continually appears behind the glass.

E. W. W.

Stoothing.

Sir,—I notice the above term used by one of your correspondents, evidently indicating what we generally call "studding." Can you or he inform me as a matter of curiosity in what districts or country this term is used commonly. Query.

Blisters on Wall.

[Reply to "O. P. L.," August 12.]

Sir,—By all accounts the water penetrated over the w.c. ceiling, and would therefore reach the lath and plaster on the w.c. side first and would be sucked up by the dry porous plaster. On the latter becoming saturated, moisture would be forced out all ways, and would have a tendency to force off the paint from the outer face, thus showing as blisters. The colour of the liquid is simply the result of impurities picked up on the way through the dusty ceiling and sandy plaster. I presume the ceiling was not painted, and therefore had no impermeable surface of paint to resist the passage of the water, and hence no blisters. S. H.

Roof Insulation.

[Reply to "Inquirer," August 12.]

Sir,—An economical way of insulating a roof is to lay stiff ceiling board on the rafters, these needing no boarding for support. Battening and tiling on the same as usual. Presto.

THE BUILDING TRADE

BOUNDARIES, FENCES AND TREES—III.

We have now endeavoured to give a very general idea as to the questions that arise in connection with different kinds of specified boundaries and how their ownership is to be determined, but other questions may arise in connection with boundaries, such, for instance, as the ownership of trees growing on or near the boundary, and we propose to deal briefly with the ownership of trees and the rights and liabilities in connection with them.

The Ownership of Trees.

This question depends mainly on very old decisions, and there is a little uncertainty in the law. The one fact that appears clear is that if it can be proved who planted the tree or sowed the seed from which it sprang it belongs to the owner of the land by whom it was planted or sown. (Holder *v.* Coates, 1827, M. & M. 112). But having regard to the slow growth of trees and the short life of man, coupled with the changes of ownership of property, this proof is hardly likely to be available in the majority of cases. If that fact cannot be proved it appears that if a tree grows at the extreme limit of one man's land but its roots extend into neighbouring land, then the adjoining owners of the land own the tree as tenants in common (Waterman *v.* Soper, 1697, 1 Ld. Raymond 737), but not so if all the roots are confined to one of the properties (see the same case).

In the case Masters *v.* Pollie (1620, 2 Rolle 141) it was laid down that if a tree grows in the close of one owner and roots in the close of an adjoining owner yet the body or main part being in the land of one owner, all the residue belongs to him. This decision has been somewhat questioned by the learned author of Hunt's Boundaries and Fences, sixth edition, but we find it cited as law by Lord Justice Kay in the comparatively recent decision Lemmon *v.* Webb (1894 3 Ch. 1) in the Court of Appeal, with the qualification of a further note: "But if it grows in a hedge which divides the land of *A* and *B* and the roots take nourishment of both their lands it was adjudged they are tenants in common of it" (2 Rolle 255 Anon.).

The Lord Justice, after quoting the above headnotes, says: "This shows that the roots though in another man's land, belong to the owner of the tree, and it is only when the tree is on the boundary line so that the trunk is partly on the land of each of the adjoining owners that they become joint owners of the tree."

This observation of the Lord Justice appears to explain what was rendered very doubtful from the various decisions, and the law, we think, may be summarised as follows:—If proof can be given of the planting of a tree in a particular property, then the position of the roots is immaterial, but where the ownership has to be presumed, then the position of the roots becomes a material element in determining the ownership. If all the roots are found in the property of one owner, then the presumption appears to be that the tree was planted in his property (Waterman *v.* Soper (*ubi sup*). If the body of the tree is in the property of one of two adjoining owners, the fact that the roots extend into the property of a neighbour does not deprive the owner of the land in which the body stands of the ownership (Masters *v.* Pollie (*ubi sup*); but if the tree stands on the actual boundary between two properties, so that the trunk is partly in one property and partly in the other, then the adjoining owners are tenants in common of it (Waterman *v.* Soper (*ubi sup*), and Lemmon *v.* Webb per Lord Justice Kay (*ubi sup*).

It must, however, be noted that no easement can be acquired over adjoining land in respect of the branches of a tree or its roots, nor can such a right be acquired by prescription (Lemmon *v.* Webb, 1894, 3 Ch. 1). This may sound an abstract proposition of law, but it has an important bearing on the right of adjoining owners as regards trees in boundaries. If the tree spreads its branches over the soil of another, no action lies for the encroachment unless damage can be proved (see per Lord Justice Lindley in Lemmon *v.* Webb at page 11); but if the branches or roots extend over or into another's land, the owner of that land can lop or cut the roots or branches penetrating or overhanging his land, and if he can perform this operation without entering his neighbour's land he can do so without notice (Lemmon *v.* Webb).

In Lemmon *v* Webb the facts were these: On the plaintiff's land, near the boundary dividing it from the defendant's land, were a number of large old trees, the branches of which overhang the defendant's land. The defendant, without notice to the plaintiff, had cut the branches on his side back to the boundary line. There was some allegation that he had cut them further than the boundary line, but the Court was not satisfied by the evidence on this point, and also found that the real issue between the parties was whether the defendant had any right to cut them at all without previous notice. The action was brought for a declaration that the defendant was not entitled to cut any branches, for an injunction and damages. In the Court of Appeal, after a careful consideration of the decided cases, Lord Justice Lindley stated the law as follows: "The law on the subject is, in my opinion, as follows: The owner of a tree has no right to prevent a person lawfully in possession of land into or over which its roots or branches have grown from cutting away so much of them as projects into or over his land, and the owner of the tree is not entitled to notice unless his land is entered in order to effect such cutting. However old the roots or branches may be, they may be cut without notice, subject to the same condition. The right of an owner or occupier of land to free it from such obstructions is not restricted by the necessity of giving notice, so long as he confines himself and his operations to his own land, including the space vertically above and below its surface."

Lemmon *v.* Webb was carried to the House of Lords (1895, A.C. 1), where the decision of the Court of Appeal was affirmed. The main point considered by the House of Lords was whether notice was required before an adjoining owner lopped the trees, and it was unanimously held that no notice is necessary where the operation can be performed without trespass, that is to say, without entering upon the land of the owner of the tree; but both Courts expressed the opinion that it was an un-neighbourly act to cut the branches without notice. In the Court of Appeal, Lord Justice Lopes referred to the risk involved of committing a trespass, whilst Lord Herschell, in the House of Lords, went so far as to say that if the practice of cutting overhanging branches without notice became common it might call for the intervention of the Legislature. Lord Macnaghten also expressed a doubt whether, in the case of young trees or shrubs which could be removed by the owner, the rule would apply, or whether the owner should not be given an opportunity to transplant them.

In our next article we shall show the reasons given by the Courts why no easement can be acquired in respect of the branches or roots of trees.

In connection with our last article (page 252) we call attention to a clerical error which occurred in the last line but one before the heading "The Sea-shore." "Non-tidal rivers" should read "tidal rivers."

NEW BUILDINGS IN LONDON

Aldwych.—Office Blocks.—Mr. Irving Q. Bush has announced his intention of extending Bush House, Aldwych. A wing on either side is to be added at a cost of about £400,000, and Bush House will finally have a frontage of 430 ft. on Aldwych. Plans are being prepared by Messrs. Helmle, Corbett and Harrison, of New York, whose London representative is Mr. H. Rogers Houchin, F.R.I.B.A., Bush House, W.C.2.

Baker-street. — Building Scheme. — A building, to include shops, flats, a public hall, restaurant, and other amenities, is to be erected at Baker-street, adjoining the station, on a site bounded by Marylebone-road, Upper Baker-street, and Allsop-place, the property of the Metropolitan Railway. It is proposed to erect a block of seven-storied buildings. The scheme will also include the extension of some of the station accommodation. It is understood that the total floor space will exceed ten acres. About 200 flats are to be provided. The scheme is to cost about £750,000, and Messrs. Higgs and Hill, Ltd., have secured the contract. Plans, it is understood, have been prepared by the architectural department of the Metropolitan Railway.

Blackfriars. — Factory Premises. — New premises, to include every modern appliance for handling, sorting and storing meat, are to be erected on a site at the Surrey side of Blackfriars Bridge for the New Zealand Meat Producers' Board, whose architects are Messrs. Hal, Williams & Co., of 79, High Holborn, W.C.1.

Ealing.—Housing Scheme.—We learn that Mr. W. R. Hicks, the borough engineer and surveyor, has prepared the plans for this scheme, details of which were mentioned in our last issue.

Hart-street, Bloomsbury. — Offices. — Messrs. Thomas & Edge, of Woolwich, are the builders for the new premises for the Co-operative Permanent Building Society, in Hart-street, Bloomsbury. Mr. Percy Morrey, A.R.I.B.A., of the Society's Architectural Department, has prepared the plans.

Hendon. — Isolation Hospital. — Messrs. Harry Neal, Ltd., of Northwood, have provisionally received the contract for the new Isolation Hospital to be erected at the Hyde, Hendon, for the Urban District Council. The Surveyor and Engineer to the Council, Mr. A. O. Knight, A.M.Inst.C.E., has prepared the plans.

Southwark. — Factory. — Extensions are proceeding to Messrs. The Wright's Coal-Tar Soap Company's Works in Park-street. Messrs. Hall, Beddall & Co., Ltd., are the contractors. The pile foundations are by Messrs. G. Tate & Co., whilst the steelwork is being supplied by Messrs. Young & Co., 6, Queen Anne's-gate, S.W.1.

St. James's-street — Premises. — Messrs. H. J. Greenham, Ltd., of Isleworth, are demolishing and excavating a site at 33-35, St. James's street, in preparation for the erection of premises for which Messrs. Robert Angell & Curtis, 133, Regent-street, W., are the architects. Messrs. F. G. Minter & Co., of Putney, are the general contractors.

Strand.—College Extension.—Structural alterations on a large scale are now being carried out to King's College, Strand, and an adjoining site over the Aldwych Station of the Underground Railway Company has been acquired for the purpose of erecting new class-rooms and laboratories. Mr. F. W. Troup, F.R.I.B.A., is the architect in charge of the scheme.

SURFACE SUBSIDENCE IN MINING DISTRICTS

By A. E. RITCHIE.

DAMAGE TO PROPERTY.

A Royal Commission was appointed in June, 1923, to consider the operation of the law relating to the support of the surface of the land in mining areas, to inquire into the extent and gravity of the damage caused to buildings and other works on or under the surface through subsidence due to the extraction of minerals, more particularly coal, and to report if any legislative or other action should be taken to remedy hardships arising in existing conditions. During the coal stoppage last year the sittings of the Commission were held up, with the result that their Report has only just been issued. It is satisfactory to learn from this document that the major conclusion arrived at by the Commission is that such damage is much less in volume and gravity than they had been led to expect.

Let us consider the cause of surface subsidence. When the stratum overlying a coal seam is deprived of its natural support, the coal, it is not strong enough to bear the weight of the superincumbent strata. It breaks and fills the void more or less completely, creating in this process another void, the movement being progressive right up to the surface. The rate of subsidence and its damaging effect upon the surface level depend upon the nature of the strata involved, and do not bear any calculable relation to the footage of the mineral extracted. The Commission say that in a row of houses one might be affected by underground subsidence, while its neighbours were not interfered with; one side of a street might suffer severely, while on the other side the buildings remain unharmed. The variation in the depth of the void created by the mining operations and the drop in the surface level is due to the fact that broken and disturbed strata can never resume the compactness that characterises them when *in situ*. If the roof of the coal seam consists of relatively hard and brittle rock, it breaks into comparatively large lumps which pile up irregularly upon each other, only to be further crushed and in a measure consolidated as each of the overlying strata comes down upon them. This movement is continued until it has finally reached the surface. Formerly it was considered that only the surface actually overlying the workings could be affected by subsidence, but now it is known that damage may spread over a much wider area. The vertical breaks in the strata are often followed by lines of lateral cleavage which greatly extend the surface liable to be damaged, and the greater the depth of the workings the wider the area which calls for support. The lateral line of disturbance, not having been recognised earlier, is responsible for the fact that in the past many dwellings, buildings and other works have been injudiciously sited. All those who are in any way concerned with building operations in mining districts should bear these facts in mind and take note of the Commission's warning that: "For the future, those responsible for building construction will have less excuse if, by excess of confidence, they are led to discard not unreasonable precautions against the consequences of subsidence which in some form must always be reckoned as in prospect."

As to the precautionary measures that are feasible, the Commission quote the opinion expressed to them by Dr. Oscar Faber, O.B.E., D.Sc., M.Inst.C.E., to the effect that ordinary brick buildings would suffer much less from subsidence if lime mortar were to be discarded in favour of cement mortar, the tensile strength of which is many times greater. He considered that cottages in a mining area would be perfectly safe if built of ordinary brickwork with cement mortar on a properly constructed cement raft. Further, Dr. Faber, who gave evidence on behalf of the reinforced concrete industry, suggested that the resulting increase in building cost would not exceed 2 or 3 per cent., while he considered that practically complete protection could be secured at an additional cost, in the worst cases, of not more than 50 per cent., and in the great majority of cases much less. It is doubtful if builders will accept Dr. Faber's suggestion that the substitution of cement mortar for lime mortar would increase the building cost by only some 2 or 3 per cent. The views of the Commission on this point generally are that, although in some instances the additional cost of securing full protection would prove prohibitive, it would not be so in all, and that with constantly improving methods of construction the tendency would always be for the cost to decrease.

Further, the Commission say that while school buildings, for example, must of necessity be located in the main centres of population, where suitable sites free from the risk of subsidence are generally not available, they were impressed by the fact that even where serious risk must have been apparent, little provision had been exercised to avoid unnecessarily heavy and ornate structures. In fact, the Commission consider that the builders of dwelling-houses and those responsible for public and municipal works should be fully aware of the risks involved; they should know the extent of the support to which the surface is entitled, or the measure of the indemnity provided where the right to support is not inherent to the land, so that when they undertake risks they do so with their eyes open. The Commission make a special exception in the case of small dwellings not exceeding £40 in rental value. These are usually occupied by miner-owners who often are forced by lack of transport facilities to live near their work, and who, willy-nilly, are frequently compelled to purchase cottages built on land entitled neither to support nor to compensation. Various suggestions were made by witnesses who sought to establish a right to indemnity for all subsidence loss, irrespective of the legal rights attaching to the surface, the money to be provided by a pool to which either the royalty-owners or the mine-owners, or both, should contribute upon an output basis. The Commission, however, see "no justification for any alteration in the existing law, or for departing from the general principle that the individual who causes the damage is the person against whom proceedings should lie."

The one special recommendation of a practical nature made by the Commission is that houses should be constructed in series of two, or at most four, instead of in long terraces as in the past. Although, as previously mentioned, certain eccentricities in the effects of subsidence may be seen, whereby one house in a street might be seriously affected while others near it remain unharmed, much damage is due to building in terraces, with the result that the disturbance of one house reacts upon its neighbours. In some cases inspected by the Commission, the line of roofing could only be described as undulating. Many of the houses had been subjected to pressure from both sides at once, and this, coupled with the general torsional stress throughout the terrace, had resulted in the collapse of doorways and windows. In some instances even the back of the house had been torn away from the front. The Commission state that much of this damage might have been avoided if the houses had been built in blocks of two or four, according to the more enlightened modern practice.

Apprenticeship Scheme.

Yeovil R.D.C. has resolved to invite the Yeovil Corporation to form with them a local Building Industry Committee, with a view to steps to apprenticing lads to the building trades through the contractors for their housing schemes.

RENT RESTRICTION

The announcement made by the Ministe of Health that the Rent Restriction Acts i their present form would be retained fo another year will be received with unfeigne regret in many quarters. The reason give for this decision was lack of Parliamentar time in which to introduce an amending Bil as many recommendations had been brough to his notice, notably a report adopted b the London County Council, which require consideration.

It seems to be overlooked in some quarter that Part II. of the Act of 1923 already co tains provisions designed to mitigate hard ships when the Acts as they stand come t an end.

That part of the Act contains sufficien powers by which the Courts can deal wit really hard cases, and reference committee can be set up to assist the Courts in dete mining questions arising under the Acts i relation to the rent, character, or conditio of dwelling-houses.

The majority of the Departmental Commi tee appointed in 1922 recommended that a restrictions should be removed at the earlie possible date, but that it was not practicab to remove all the restrictions on all classes o houses at once. It is true that the minorit report contained a recommendation that th present restrictions should be continued unt 1930, but that recommendation only applie to the houses coming within the category o the 1915 Act, and it was suggested that a regards other grades of houses, the restri tions should only continue to the same da unless they should be previously withdraw by an Order in Council. Rent restrictio was always a doubtful policy, only possib to be justified at all by a national emergenc and it should be disposed of at the earlie possible date. The protection of houses o the higher grade (made higher when it remembered that not only the rent but th rateable value applies to bring them withi the Act) is an anomaly that can certainly n longer be justified, as it is the houses o higher value in which the greatest progre has been made in construction since the wa

Rent restriction was really a piece of cla legislation which could only be justified b the necessity of the moment. Its operatio involves litigation out of all proportion t the value of the matters in dispute, and a each year passes it favours a steadily de creasing number of the population.

There is abundant evidence from th Courts that now it is often being used im properly, allowing persons to make profit ou of the protected houses, and that it is onl in the case of the houses of the lowest valu that any necessity can be shown for it Naturally, when any question arises as to it repeal, the protected classes will raise agit tion, but such agitation should be taken a its face value, the inclination of those wh have occupied a privileged position for thi teen years to cling to their privileges.

It is disturbing to find traces of the Re Restriction Acts being imported into th Landlord and Tenant No. 2 Bill. The much disputed clause 5, which relates to the rig of a tenant to claim a new lease, repeats th limited provisions under which a landlor can take possession of his own propert taken nearly verbatim from the Rent Acts.

We cannot but think that attention to th question of Rent restriction was far mo important than the new Rating Act, and th this matter should have received the attentio of the Government before time was given t to that Act.

New Hospital, Gorseinon.

The new hospital at Gorseinon, Glamorga which has been designed by Mr. Glendinni Moxham, F.R.I.B.A., of Swansea, is to ha accommodation for 20 beds and will erected on a site overlooking the public pa The contract, which is for £20,000, has be given out to Messrs. Rees Thomas and So of Loughor.

(For rates of wages in the Building Trade in Scotland see page 296.)

CONTRACTS, COMPETITIONS, &c.

For some contracts still open, but not included in this List, see previous issues. Those with an asterisk are advertised in this number. Certain conditions beyond those given in the following information are imposed in some cases, such as that advertisers do not bind themselves to accept the lowest or any tender; that a fair wages clause shall be observed; that no allowance will be made for tenders; and that deposits are returned on receipt of a bona-fide tender unless stated to the contrary.

The date given at the commencement of each paragraph is the latest date when the tender, or the names of those willing to submit tenders, may be sent in; the name and address at the end is the person from whom or place where quantities, forms of tender, &c., may be obtained.

Following is a list of abbreviations:—Borough Surveyor, B.S.; Borough Engineer, B.E.; District Surveyor, D.S.; Clerk, C.; Town Clerk, T.C.; County Engineer, C.E.; County Surveyor, C.S.; County Architect, C.A.; Surveyor, S.; Engineer, E.; Borough Architect, B.A.; Architect, A.

BUILDING. PAINTING, ELECTRIC LIGHTING, HEATING, ETC.

TRADE NEWS

Building Exhibition, Belfast.

A housing and building exhibition will be held in the Ulster Hall, Belfast, from Friday, September 2, until Wednesday, September 14. The exhibition will comprise displays of the latest constructional materials, contractors' plant, wood-working machinery, patent fibrous plasters, sanitary fittings and appliances, marbles, mosaics, partitioning slabs, patent stone and concrete erections, and the latest advances in the builder's arts and crafts.

Road-making Machinery.

We understand that Messrs. Goodwin, Barsby & Co., Ltd., of St. Margaret's Ironworks, Leicester, have, owing to the big increase of business not only in the home markets but also abroad, had to add considerably to their plant and extend their accommodation. This firm has machinery being built in the shop or awaiting dispatch for many overseas markets, including Ireland, Malay Peninsula, Spain, Norway, Dutch East Indies, New Zealand, and South Africa.

Travelling Exhibit of Radiators.

The National Radiator Co.'s, Ltd., travelling exhibit fitted with a working installation of the "Ideal" Cookanheat and "Ideal" classic radiators will demonstrate from August 25 to 29 at the Winter Gardens, Southport.

Composition Flooring.

We understand that the Wilfley Company, Ltd., of Salisbury House, London Wall, E.C. 2—proprietors of the "Marbolith" composition flooring—have now established a special wood-flooring department for estimating parquet, wood block, strip, under the direction of Mr. T. Burke. Estimates will be furnished promptly upon application.

Portland Cement.

The Portland Cement Selling and Distributing Company, Ltd.—proprietors of "Red Triangle" products—announce a new departure in the marketing of cement. Their products will now be obtainable in strong damp-proof cwt. paper sacks, which will obviate the necessity of return carriage on empties. We also learn that the British Engineering Standards Association have drawn up British standard specifications for Portland cement for fineness, chemical composition, tensile strength, setting time and soundness. This specification defines the standard of quality of cement, and we understand that the "Red Triangle" organisation guarantees that the brands marketed exceed in every case the standards laid down by the Association.

Heavy-Oil Engines.

A new catalogue (No. 343) has been issued by Messrs. Tangyes, Limited, Cornwall Works, Birmingham. In this are illustrated and described many types of their heavy-oil engines of the cold-starting type. These are fitted with "variable-admission" oil governing, for use with residual oils, refined oils, or arranged for use on tar oils, alcohol, etc. The catalogue is sent free upon application.

NEW BUILDINGS IN SCOTLAND

Fraserburgh. — Gas Works. — At the monthly meeting of the Fraserburgh Town Council, the Town Clerk was authorised to borrow £20,000 for the erection of the new gas works.

Glasgow.—Alterations.—The Corporation is to carry out extensive alterations at Argyle- and Oswald-streets, part of an improvement scheme. Tenders are now being invited, Office of Public Works, 64, Cochrane-street.

THE BUILDER

A JOURNAL FOR THE ARCHITECT AND CONSTRUCTOR

WITH WHICH IS INCORPORATED "THE BRITISH ARCHITECT."

OL. CXXXIII. No. 4412. AUGUST 26, 1927.

AN ARCHITECT'S HOLIDAY

A HOLIDAY means a change of occupation, a change of surroundings, and a rest from ordinary work, and that so many architects should like to continue their work, in another guise, during the holidays constitutes astonishing proof of the attractions of architecture as pursuit. If an architect is fond of sketching buildings and joys his holiday the more for opportunities of recording his pressions so much the better, but the architect who dislikes etching and has no particular aptitude for it, has, perhaps, the past been put too much into the outer darkness. We ould remember that a busman's holiday is only of value hen the busman enjoys it, and that it ceases to be a holiday all if he carries on with his ordinary work because he thinks is expected of him. Sketching is a means to an end, and ears little if any more relation to solid architecture than does erature that deals with buildings. So many successful chitects have enjoyed sketching in their leisure moments that one time it became rather a fetish, and architects may have een a little too much inclined to expect every one of their mber to indulge in the same pastime. In reality the non-tcher is not necessarily the worse architect.

The average architect travelling abroad is in a different sition from the man who concentrates on fishing, golf, or nnis; he has to help in paying his way. It is here that etching may come in with badly-needed reinforcements, and ere is considerable satisfaction in defraying part of the penses of a tour with the brush or the pen. The sale of atercolours carries the disadvantage that they are lost as cords of an enjoyable tour, and the photographer and the iter may claim that their records are always available if they ed to refer to them. To the lay mind, perhaps, the most markable point about the artist is his willingness to face wds of the curious and ignorant, who regard him with atumely, not concealing their opinion that he must be ched in the head. Many men would rather make an after-ner speech in the Guildhall than sit down solemnly to sketch nehouse Reach or the Chelsea Embankment with the plicity and feeling of inferiority that the occupation entails. seems grossly unfair that a harmless man should be unable sit and sketch in peace and quiet; but little boys appear to w out of the pavement.

No architect worthy of the name can put his work com-ely on one side to the extent of not enjoying (or detesting) buildings with which he is brought into contact, and the era enables him to carry away records of buildings which, ough on a lower plane than sketches as works of art, yet certainly more accurate in conveying the actual building vishes to recall. The sketcher, too, is of necessity more icted in locality, since, however rapid his work, it must more time in the same place than would record work with camera. He may claim to observe his details better, but ust obviously see less.

he literary architect will probably approach his holiday attitude of mind which, if not fully prepared, is at any acutely awakened by the recorded observations of others. e he has started for his trip he will have read up his ty; he will have decided definitely on what he particularly to see and why, or he will have chosen deliberately to unprepared, that his impressions may be the less influenced hers. In either case he will tend to observe more as a than in detail, perhaps more historically or philosophically he sketcher, and his eye will be alive both to points of ss and of contrast. He will cover more ground but with ecision; and since he will have set out with no clearly d object to be accomplished, he will return satisfied and without the feeling that he might have occupied his time to greater advantage had he been more industrious.

The scientific architect will tend to combine many of the peculiarities of the other types. He will certainly have looked up his district and his subject first, and he will observe and record as he goes along. If less panoramic than the man of letters he will, as regards structure, be more fiercely accurate than the man of pencil and paint. He will measure angles, he will not ignore the fifth place of decimals. His eye will gleam when he sees new concrete; he will shout aloud if he finds an ancient incised tomb, for the follower of science cares for no especial period and his record of a happy holiday will be as irrelevant and miscellaneous as is the collection in a schoolboy's pocket. All's fish—and all will fry.

As a final type there is the boon companion, the architect who makes friends. He will begin in the railway train, consolidate at the hotel, shock his wife by fraternising (in any patois) on the charabanc, and then discover a quaint little restaurant from a companion in a queer hat on the funicular railway. Who will say that he is not thereby the better architect, since humanity and still humanity is the basis of all good work? This virtue of good fellowship in many forms is rapidly coming into fashion. At one time young men of stern intention travelled in pairs in flannel trousers. By their sketches and essays were they judged on their return. Now our young men and maidens move in pre-arranged groups, and, besides flannel trousers, they bring suit cases and they change. They not only move through foreign countries, but for a week or more they live in them, alternately learning from and revelling with the home architects. And another year their same hosts will come over to us.

This international phase of social good will is a novel factor in corporate experience, and it has already reacted with marked effect on architectural outlook. At the same time, there still remains a large body of men and women who prefer to take their holidays in their own way and who fall into no group of sketcher, writer, or scientific observer. Their aim is purely rest and recreation, and among them are numbered shamelessly the names of excellent, if undeserving, architects. Their prize may be different from the deliberate aim of their fellows, but if they embark with the light heart of enthusiasm and succeed in enjoying themselves they have had their reward. One of the greatest advantages of architecture as a profession is that it presents a perfect reason for going abroad, and perhaps one of the indictments that might be brought against the sketching enthusiast of the past is that he gave minute attention to picturesque mediæval buildings, or old hill villages, and had, by consequence, no time to observe the trend of contemporary thought in the regions he was visiting. The mere fact that foreign travel is, and ought to be, a means of expanding the mind rules it out as a normal holiday; is it not part of the architect's perennial training?

But perhaps the best busman's holiday of all for the enthusiast is to retire to his home in the country, and indulge in building and gardening on his own account with no need for responsibility, tact, or compromises with clients; where he and a few men can build, pull down, and experiment, and where, with his own hands, he can carry out those practical constructional jobs that usually fall to the lot of the official builder.

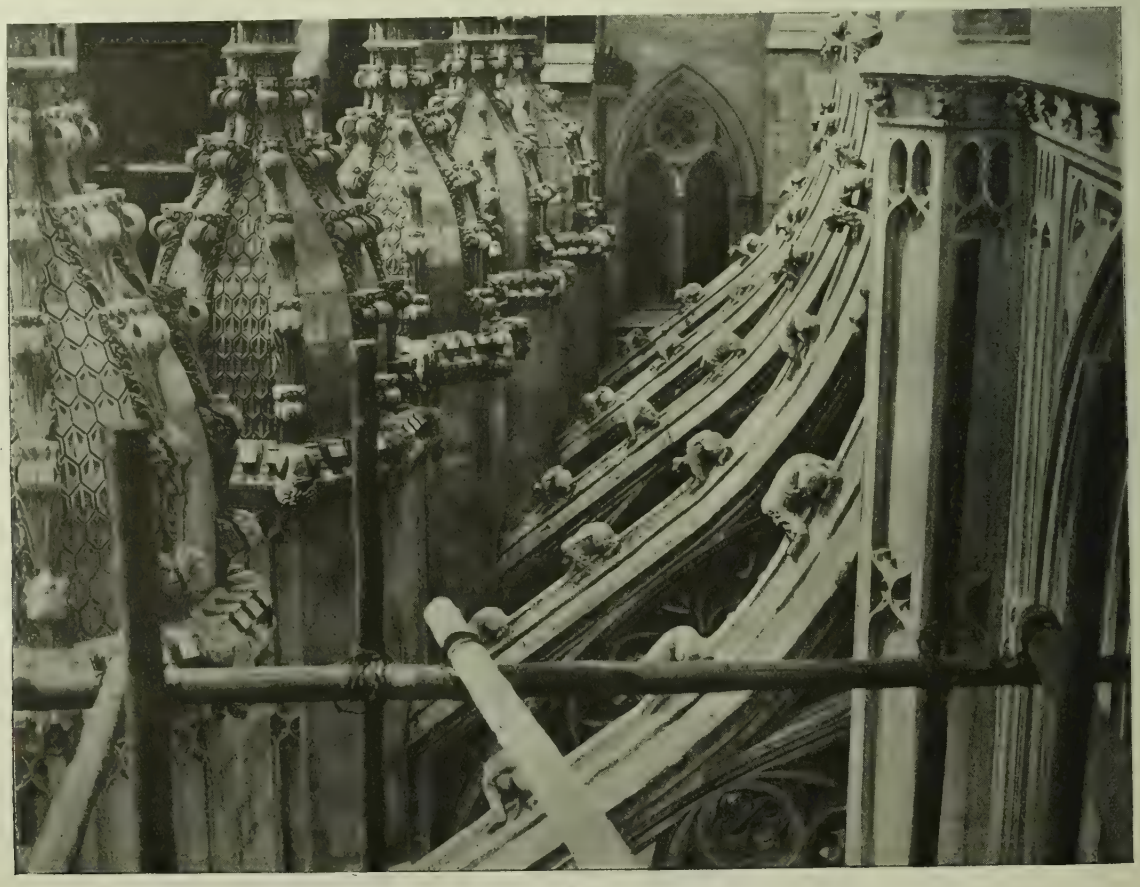
An examination of this subject shows that nearly all architects take their work, in some form or other, with them. What doctor or solicitor would concern himself with operations or conveyances during his holiday? This proves that, despite the pessimist, architecture carries its own reward.

NOTES

Collapsing Buildings.

The collapse of buildings in three or four localities in London during recent weeks gives cause for some anxiety and serioust hought. We are glad to see Sir John W. Simpson has made a useful contribution to the subject in a letter to the "Times," and he emphasises the fact that a number of old buildings are doubtless in a state of uncertain equilibrium, partly because of their poor construction and partly because of the vibration caused by the greatly increasing heavy traffic in our streets. It is open to question whether we can safely or economically construct extremely lofty buildings in London, and our recent experience certainly suggests a need for the greatest vigilance on the part of district surveyors, builders, foremen, and not least of our architects. The increasing height of our commercial structures is accompanied by further depths of basement work, and the manifold works below ground must of necessity affect the solidity of walls and foundations below the ground level. Whilst there is no need for panic, our recent troubles have made it clear enough that there is need for the greatest vigilance and care all round.

Exemptions.



A very pertinent question is raised by Mr. R. D. Robson in his letter on p. 308 as to the exemptions to be granted to students of the Schools. It is surely certain enough that the schools do not profess to turn out students (even after their full course) as fully qualified practical architects? His suggestion for a period of practical experience being insisted upon is well worth the attention of the Institute.

A Joan of Arc Memorial.

Memorials of the past are becoming a peril, and it would seem as though the age, unable to build its own monument, had fallen back on memorials of the past in place of its own achievement, much to the peril of the former. It is to be hoped that the scheme for a great memorial to Joan of Arc at Rouen will have much reconsideration bestowed on it before it is allowed to imperil the associations of this ancient city. The design, so we are told, "is in the fifteenth century style," has very little appearance of being so, being chiefly distinguished by that highly artificial pseudo-Gothic exaggeration, which calls up the cinema, really offensive to taste and to the dignity of a noble city, though not intended to be so. Grave injury to its associations would be entailed if any such scheme were carried out, nor does a spire 600 feet high, which is to surmount the church, lessen the dismay which such a proposal will call forth. The City of Rouen is itself a much better memorial to the events associated with its name, and next to the witness which the city is itself to the events connected with Joan of Arc, its inhabitants can make a much better memorial to her memory in preserving them without any such disfigurement. Such a building is no less foreign to the Gothic spirit than it is foreign to what we are feeling to-day

The Salaried Architect.

A correspondent writes "In the controversy that has arisen on this subject certain aspects have been a good deal ignored. On the face of it there would seem, without doubt, objections to architects employed by the Government undertaking private work. Moreover, it is the case, we believe, that in their contract there is generally included an undertaking that they will not do other work while in Government employ. As a general security against abuse this may be very well included, but must be interpreted generously. When a good architect is employed in this way, is it desirable to curtail any opportunity of which he can make use, so that the work he has undertaken to do is not neglected? It is a truth of employment, that if you have a good man it is best to let him alone. It seems to me rather a matter for generous interpretation, and that the letter of the contract may be too closely interpreted by some critics. We must be careful that our criticism is made in the public interest, and not from any petty feelings of jealousy. There is room to-day for us to think more generously, and to be concerned to do our own work well rather than complain at the way it is undertaken by others. If abuse exists such abuse should be prevented, but we must distinguish between the letter of o

New Pinnacles and King's Beasts on the Henry VII Chapel, Westminster Abbey.

"The Pursuit." Bronze Sketch for Garden Group.

Mr. Alfred Buxton, Sculptor.

objection, and the practice. Unless we can see the public interests suffering, the less criticism the better."

The Zuyder Zee. The reclamation of the greater part of the Zuyder Zee is well in hand, and an interesting account of the work has recently appeared in *The Times*. The 1½ miles of dam, running from the west coast to the Island of Wieringen, has been completed. The 12 miles of the main dam is to run from Wieringen to its counterpart in the form of an artificial island near the east coast. The central area is to be left submerged as a fresh water lake, to be known as Lake Yssel, for the irrigation of the surrounding country, to catch rainwater and some of the Rhine water. The total cost of enclosing the sea is estimated at £7,500,000 and is in the hands of 25 Dutch engineers and 1,000 workmen. The reclamation will add about one-tenth to the total area of the country.

The Use of Marble. The use of marble for shop fronts in France and Belgium, especially the latter, is becoming a prominent feature in shop-window design. The method is to depend more on the effect of the marble itself, its colour and surface, than for the treatment of the material. Flat surfaces without mouldings forming a frame of which the window is the picture, without much, or even any light and shade, and accompanied by bright colour in furnishings, form the principal motive. It is all rather bald and superficial, from which human interest of architectural design and working of the material is almost excluded. This dependence on materials so little vitalised by human interest seems to contradict the purpose of architecture, which works through materials to an end beyond them, using them as the vehicle for the artist's interpretation; and therefore the result is unsatisfying for lack of design and craftsmanship which count for so little.

National Gallery, Millbank. The Record of Ten Years, issued through the University Press of Glasgow, gives an interesting account of the acquisitions to the Tate Gallery during that period. In connection with these acquisitions reference is made to criticism as to the discretion shown in the choice of some of them. We have on several occasions had to regret the selection made, which has seemed to us too much influenced through prevailing, though we hope temporary, misapprehensions as to the nature of art. So-called advanced views in regard to modern art have led us to forget that in one sense art is neither modern nor ancient, its deepest motives drawing their strength from what is common to both. Novelty, mere difference, may prove decadence rather than development, and we think the directors have not always distinguished between the two. We are told in this publication, "The risk of acquiring a few contemporary works that will not bear the test of time is more than balanced by the risk of missing opportunities that will have to be paid for heavily later." But this is precisely what the direction have done, and we shall probably pay heavily for the opportunities missed through the predominant preference for certain tergiversations of the intellect, which has been the case in recent years.

The late Roland B. Chessum. The death of Mr. Roland B. Chessum, the well-known builder, will be heard of with widespread regret by those who knew him and appreciated his great interest in building as a craft and his pride in his calling. His work on behalf of the Industry is well-known and also his belief in the necessity for a better understanding not only between employers and operatives, but between architects, builders and all the many interests involved. He believed in the team spirit in industry, and his unexpected death at a comparatively early age will be deplored by all who knew him.

A reconstruction in the Eighteenth Century manner in the rebuilt Ypres

GENERAL NEWS

Professional Announcements.

Mr. Victor Martin, F.S.I., and Mr. F. Stanley Griffith, F.S.I., practising as Martin & Griffith, quantity surveyors, at 17, Bedford-row, W.C.1, have mutually agreed to dissolve partnership. This will take effect as from September 30, 1927, and Mr. Victor Martin will continue to practise at 17, Bedford row, W.C.1.

Mr. F. Stanley Griffith, F.S.I., has removed from 17, Bedford-row, and will in future carry on his practice at 36, Victoria-street, Westminster, S.W.1. (Telephone: Victoria 3346). New trade catalogues will be welcomed.

Mr. S. W. Ackroyd, A.R.I.B.A., has removed his office from 148, Powis-street, Woolwich, to Commonwealth-buildings, Albion-road, Woolwich, S.E.18. Telephone number: Woolwich 1201.

Sir Charles Walston's Estate.

The will of the late Sir Charles Walston, of Newton Hall, Newton, Cambridgeshire, has been proved. The amount of the unsettled personal property is £12,512 gross and £11,679 net.

Salford Exhibition Hall.

It is reported that, after negotiations over a period of nearly five months, it now seems likely that a scheme for the erection of a Trades Exhibition Hall and other buildings on the site of the Salford Cattle Market will materialise.

Masonic Hall and Club, Nottingham.

It is expected that a commencement will soon be made with the erection of the new Masonic Hall and club, to be built at the corner of Belgrave-square and Goldsmith-street, Nottingham. The total cost of the scheme is estimated at £60,000.

Model Colony, Shenley.

A scheme for the establishment of a colony for mental defectives at Shenley, in Hertfordshire, to cost £2,000,000, has been put before the Board of Control by the Middlesex County Council. It is now under consideration by the Minister of Health.

New Bridge, Hull.

A new pedestrian and vehicular bridge is to be built over the river at Hull, between the oil-milling quarter of the port and the central thoroughfares of the city. It will take three years to build and will cost £100,000, towards which the Ministry of Transport has sanctioned a grant of £50,000.

Further City Subsidence.

Part of the roadway in Sherborne-lane, within a stone's throw of the scene of the recent Cornhill collapse, subsided recently, and a wheel of a cart sank as far as the hub, which rested on the kerbstone. The hole was several feet deep and four or five yards wide. The subsidence is believed to be due to the recent heavy rainfalls.

Barnet's Old School.

The fear that the historic school hall at Barnet is in danger of demolition is arousing public opinion in the locality, and efforts are being made to have the building scheduled as an ancient monument. The hall was built in 1573. Still preserved are the original charter granted by Queen Elizabeth and the ancient whipping post.

The University of Hull.

The Ministry of Health has given its sanction to an expenditure of £150,000 by the Hull Corporation towards the erection of the buildings required for a University for Hull. The new university will be erected on a site between Hull and Cottingham, and will be built from a nucleus fund of £250,000 given by Mr. T. R. Ferens, Lord High Steward of Hull. The foundations of the building are now being put in.

P.O. Buildings.

We are given to understand that Lord Wolmer, Assistant Postmaster-General, informed Mr. Gillett that provision for the commencement of the new building scheme at Mount Pleasant had been made in the 1927 Estimates; and the demolition of the old buildings, which must be carried out before the new building could be started, would be undertaken as soon as possible after Christmas.

Edith Cavell Memorial Church, Alberta.

An appeal is being launched for funds for the building of a church in Jasper, Alberta, to be known as the Edith Cavell Memorial Church. The church is said to be designed along the lines of Norwich Cathedral, in which Nurse Cavell worshipped as a child, and under whose shadow she is buried, and it is to be built partly on the shores of and partly on piers projecting into Lac Beauvert, one of the most beautiful lakes in the Canadian Rockies. The estimated cost of the work is £11,000.

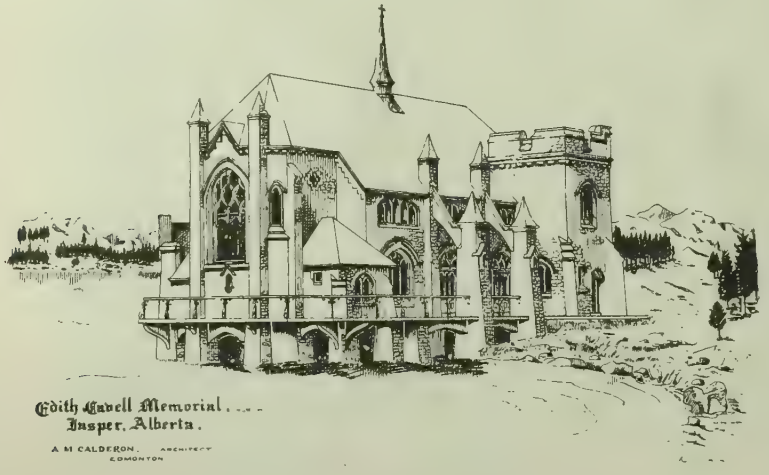
Southern Railway Development.

Plans by the Southern Railway for the construction of the electric line between Wimbledon and Sutton—five or six miles in length—are being completed, and will be considered by the directors in October. If, as is expected, the directors approve the scheme, the work will be begun almost immediately. Under the company's existing powers the scheme must be completed by June, 1930, unless an extension of time is given. Embankments and cuttings will have to be made for considerable distances, and the plans provide for 21 bridges.

Borstal Establishment Remodelled.

Boys in the Borstal institution at Portland have lately completed the remodelling of the old convict establishment. A block of 340 prison cells has been divided into two sections, each block containing 80 bedrooms, and, on the ground floor, a lofty dining-hall, kitchen, schoolrooms, recreation-rooms, house masters' and house mistresses' offices. All the work has been done by the Borstal boys themselves, of whom there are now 360 in the Portland institution. The alterations were designed and planned by the Home Office surveyor, Colonel H. S. Rogers, and his staff.

Open-air Cinema for Sheffield.



The first large-scale open-air cinema in England will be a feature of the new island pleasure palace which is to be erected in Sheffield on the lines of Coney Island, New York in miniature. A newly-formed company of leading cinema exhibitors in Yorkshire has obtained possession of a site near the centre of the city. The land is bounded on one side by the river, and on the other by a large dam making it a complete island. Cafés, side shows all the year round, a dance hall, and other amusements capable of entertaining 10,000 people at one time are also included in the scheme.

New Cathedral for Derbyshire.

Apropos of the recent appointment of Dr. Pearce as first Bishop of Derby, it is proposed to spend £5,000 on making All Saints' Church suitable as a cathedral church. Although it possesses a beautiful choir-screen and some good stained glass, the church is without a chancel, and it would cost at least £50,000 to build one. In addition, the church is in cramped surroundings. The Bishop of Southwell has issued a warning that the question whether Derbyshire should not build a really worthy cathedral should be settled before any heavy expenditure on All Saints' is embarked upon. It is believed that £500,000 could easily be raised in a few years as the first instalment of a cathedral fund.

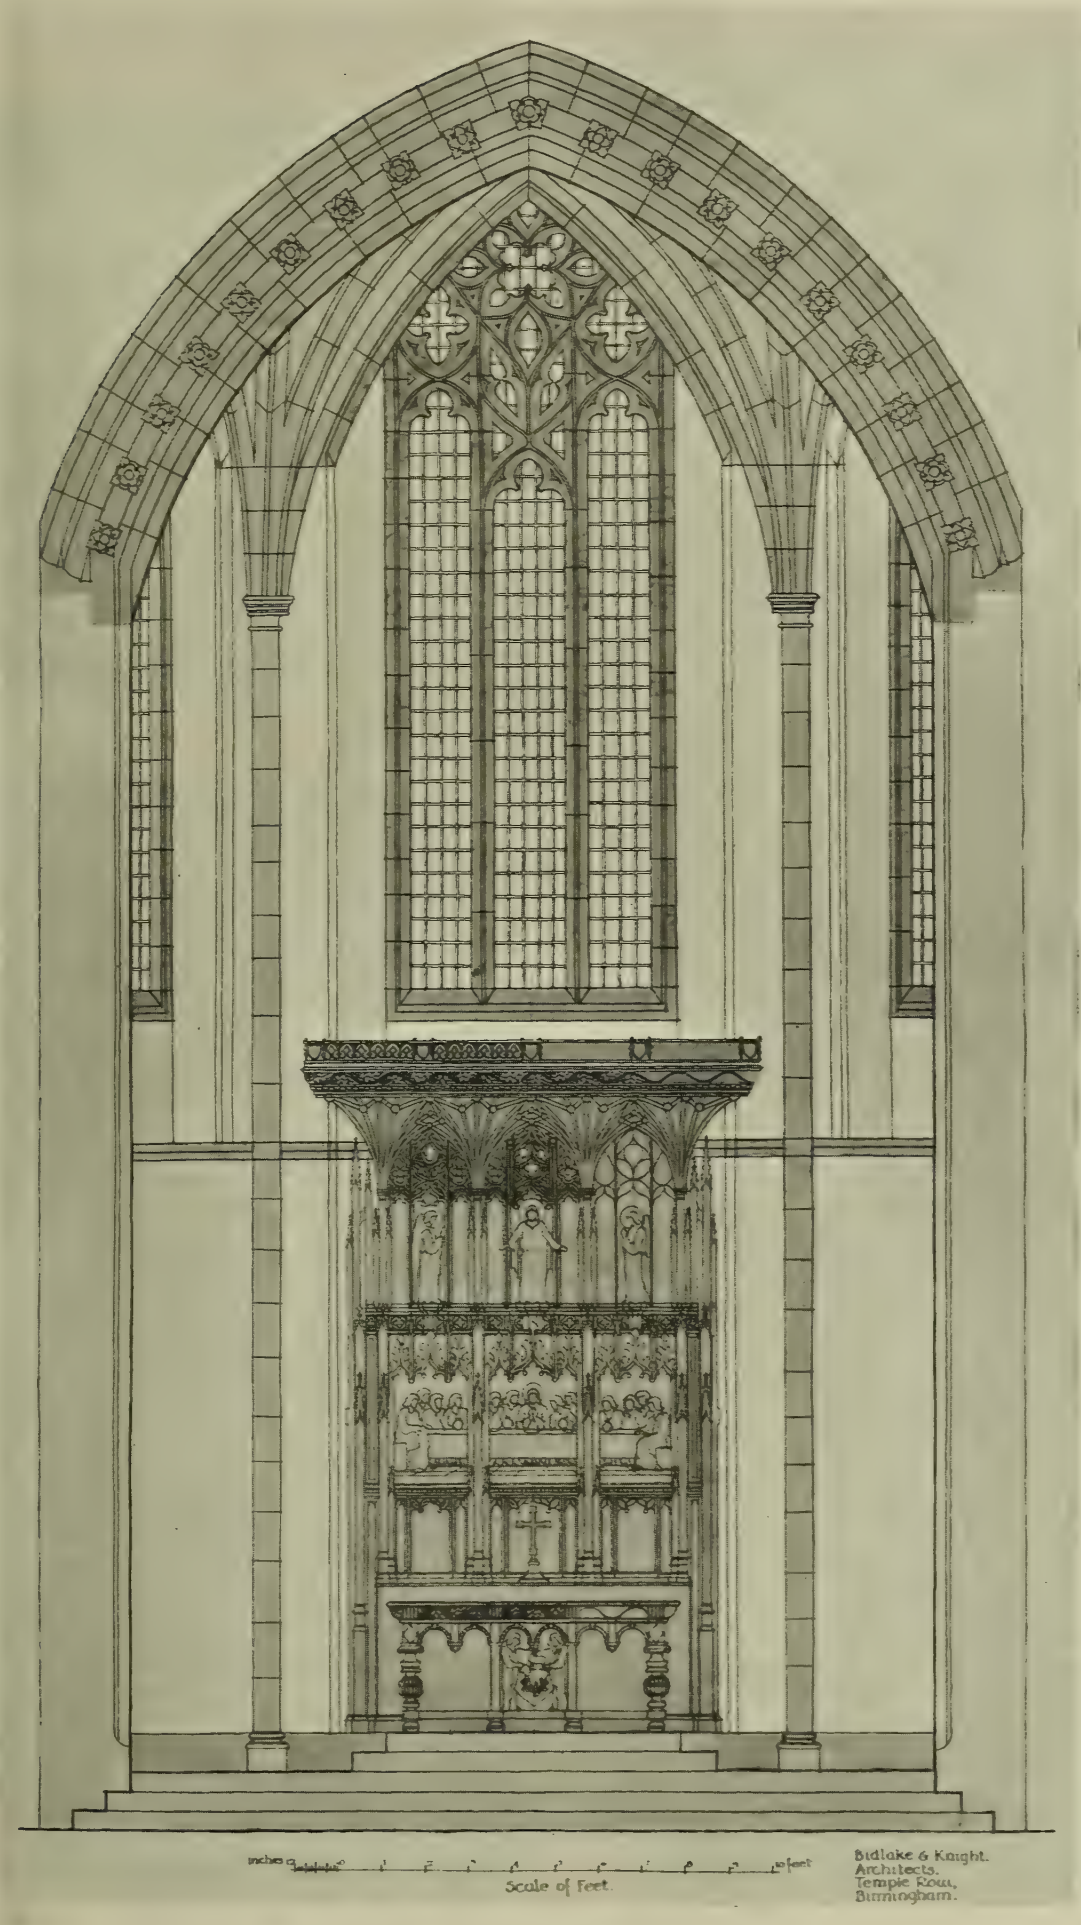
Flats for Large Families.

A block of flats has been constructed in Blackshaw-road, Tooting, for the accommodation of large families, who at present are obliged to live in crowded areas. Some of the flats have five bedrooms, and are, according to the *Times*, the only flats of the kind which have been built by a public authority in this country. To provide the five bedrooms the County Council gave a special concession for the construction of attics. The flats have cost about £10,000. They are constructed of brick and tile, and are designed on labour-saving and sanitary lines. Each flat has its bathroom and scullery, the latter fitted with a copper. Lighting is by gas and gas cookers are provided in addition to kitchen ranges.

Proposed Edith Cavell Memorial Church, Jasper, Alberta.

COMPETITION NEWS

Senior School, Birkdale, Southport.



Southport Corporation propose to build a senior school in Birkdale, and an open competition for designs is to be held in due course.

New Technical College and School of Art, Rotherham.

The last date for submitting designs in this competition has been extended to October 31.

Australian War Memorial, Villers-Bretonneux.

A board of assessors, consisting of Lieut.-General Sir Talbot Hobbs, of Perth, the late Mr. G. S. Jones, of Sydney, and Mr. J. Murdoch, the chief architect of the Federal Department of Works and Railways, in consultation with the R.I.B.A., has awarded the first prize of £250 for a design for a memorial, to be erected at Villers-Bretonneux, to the Australians killed on the Western front, to Mr. William Lucas, of Melbourne. The cost of the memorial will be about £90,000. The monument, which will be 100 ft. high, will be inscribed with the names of 12,000 men who fell, but whose bodies were never found. The successful design consists of four columns of polished trachyte, resting on a granite base on which the names will be inscribed. Flanking these columns north and south are granite blocks, surmounted by four bronze figures symbolic of Mercy, Truth, Righteousness, and Peace. Above the four columns is an observation window, reached by lift or staircase. In one of the columns at the summit is a cross of which each arm is studded with a golden star.

New Altar and Reredos, Bishop Latimer Church, Handsworth.

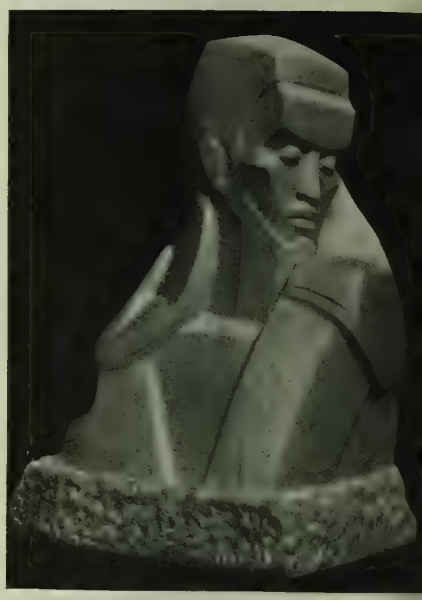
Messrs. Bidlake and Knight, F. and A.R.I.B.A., Architects.

THE WORK OF DAVID EVANS, SCULPTOR

By T. P. BENNETT, F.R.I.B.A.

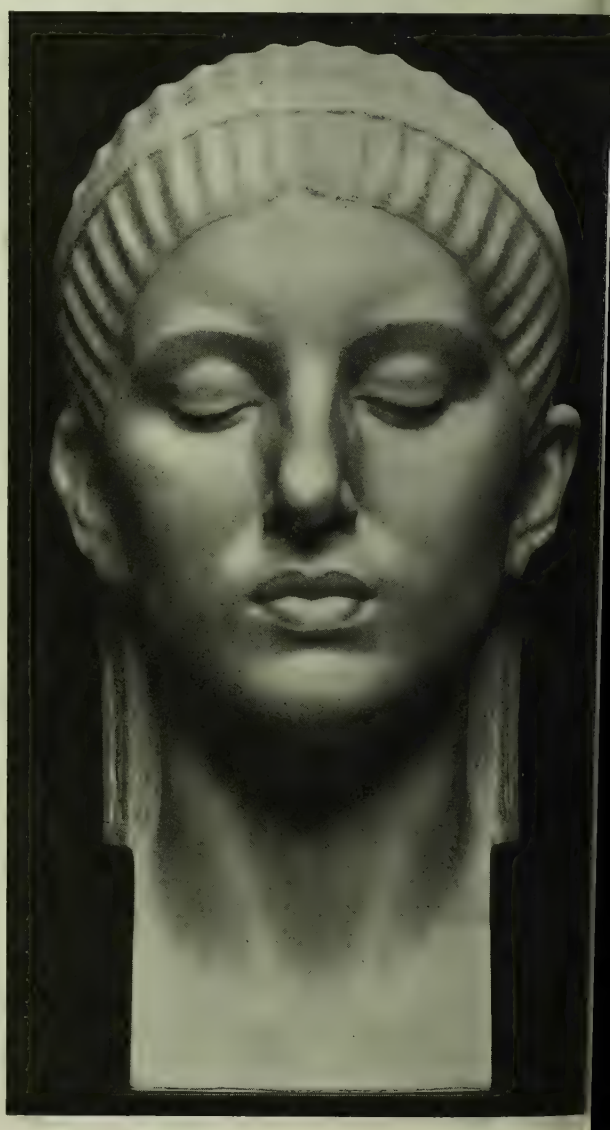
"Madonna and Child."
Mr. David Evans, A.R.C.A., Sculptor.

Amongst the work of our younger sculptors, that of Mr. David Evans is attracting an increasing amount of attention. Not only is he displaying marked ability in the representation of form, but he is also acquiring an individuality of treatment which is an unmistakable attraction and which possesses qualities which are new and will go far to make him widely known. His work, also, has an important quality of variety; some of it being completely naturalistic, but much having severity of line and richness of quality, which gives it an architectural character. He should, therefore, have amongst his future commissions much work in collaboration with architects.



Reference has already been made to the small female torso in the Academy this year, and also to the "Madonna and Child." These two works are broadly typical of distinct phases of his ability. His more conventional work is in every way most attractive. There is a very beautiful head called "Marghetta," executed in marble, which has a certain Egyptian atmosphere about it. The treatment of the features and the hair have combined to create a wonderful atmosphere of mysterious beauty. The lips and heavy eyelids emphasise the Egyptian characteristics of the work and give the head a distinctive type which raises it far above the commonplace.

Mr. Evans appears to be eminently successful in handling lips and eyes in this manner, and his portrait head of "A negress from North Africa" emphasises his power in modelling heavy features so that they can be entirely appreciated by Western European eyes.



Another portrait bust in marble, that of Mrs. Monnington, has a remarkably sculpturesque character. Even when the sitter is unknown, such work can be appreciated for the qualities which it possesses as a pure piece of modelling, besides holding the attention of the critic by its force and character.

An essay in the cubic manner, called "Moses," is another interesting work, although its portrayal of the conventional appearance of the great Jewish leader may be slight; in fact, it would appear to be more an essay in this particular method of handling than a literal summary of the qualities of Moses. This same squareness of shape and naïveté of detail is seen in "The Kiss," a marble work of an ultra-modernised character which possibly owes something to the influence of Mestrovic.

A life-size figure, called "The Slave Girl," modelled by Mr. Evans, has been erected in the Cortile of the British School at Rome. This figure, from some viewpoints, has a powerful conventionality, which sug-

"Moses." Marble, 15 in. high.

gests that it is eminently suitable for architectural surroundings, although not necessarily that of the soft and pleasing shapes of the simple Italian Renaissance courtyard in which it is now found. Mr. David Evans also has ability in relief, giving it severity of character and a slightness of modelling which are most attractive.

In a career which is still young, he has had many successes, winning the Senior Art Scholarship at Manchester, a National Scholarship of the Royal College of Art, South Kensington, the "Landseer" Scholarship at the Royal Academy School, the British Institution Scholarship, and finally the Prix de Rome.

"Marghetta." Roman Girl, Life-sized Head, Marble.

Head of an Ethiopian Negress. Plaster, for Bronze.

Mr. David Evans, A.R.C.A., Sculptor.

THE EMPLOYMENT OF SPECIALISTS.

By A Legal Correspondent.

With increasing frequency during the last few years there have occurred subsidences or collapses of important buildings and roadways, of which the subsidence of Waterloo Bridge, and the collapse recently of a large building in the City of London, are the most startling instances. Roadways have collapsed revealing deep cavities underneath. These events have caused not a little anxiety to architects, who realise that the undermining and tunnelling of the subsoil for conduits of all kinds, both large and small, removes that "bottom" on which they used to rely for the foundations of the buildings. Further, the vibrations and pounding of the surface of the roadway from increasing heavy and speedy motor traffic necessitates that in the future special provision must be made for the support of the larger and heavier buildings, particularly of those which are constructed of steel and reinforced concrete, as the majority of the larger now are.

Most architects commissioned to design and superintend the erection of such important buildings will generally find necessary the assistance of structural engineers, whose work is to prepare drawings involving careful mathematical calculations of the strength and dimensions of the members and materials used. The architect will then "clothe" the carcass, and give it its "finishings," so as to produce the complete building. In short, the mathematical knowledge of the structural engineer will be required to co-operate with the artistic taste of the architect, in order that under existing conditions the permanent safety of buildings may be ensured.

Nomination of Specialists by Employer.

Building contracts often do, and should, provide that the employer shall be entitled to nominate or select specialist tradesmen or sub-contractors to execute any special work comprised within the general contractor's contract, such specialists being often named in the contract documents. Their nomination or selection does not of itself create any direct liability between the employer and the specialist if, as is customary, the sub-contracts are made between the specialists and the general contractor for the work. Nor can there be any suggestion that the general contractor is only an agent of the employer in these circumstances. Thus, in general, as between the employer and the specialist or sub-contractor employed, there is no priority of contract; and the general contractor remains liable to the specialist or sub-contractor for payment for work carried out. (See Hampton *v.* Glamorgan County Council, 1917, A.C. 13.)

Duty of Architects.

Now, it must be borne in mind that the duty of an architect, among other things, is to supply all necessary detail drawings and instructions relating to the work to be performed; and this would appear to include those required for any special methods or materials such as steel construction and reinforced concrete. In the past, architects, to avoid employing an expert structural engineering draughtsman in their own office to prepare drawings, etc., from such work, have relied on manufacturing firms supplying structural steelwork and special reinforcement for concrete, the sub-contractors for the work. These manufacturers themselves employ structural engineering draughtsmen, who prepare the drawings, etc., above referred to, making no direct charge for special work. This obviously relieves the architect of a part of his duties, though he must, in fact, approve what they have done.

If the architect does elect to prepare these drawings, etc., himself, he nominally will forward them as he does the drawings to the general contractor for the whole of the work, who will, doubtless, sub-let the steel and special reinforcements, just as he would other special works which he is permitted to sub-let under his contract. Should the architect enter into direct negotiations with any specialists or sub-contractors he runs the risk of misunderstandings arising; or, of its being definitely argued that he, as agent of the employer, has made the latter liable for payment of the specialists or sub-contractors, the general contractor not having dealt directly with them.

Certifying Payment to Specialists.

An architect, in certifying for payment to the general contractor, often indicates in the certificate what proportion of the amount certified is payable to specialists or sub-contractors with whom he has had direct negotiations in respect to the sub-contract; so that indirectly, though nevertheless truly, the employer pays, more or less directly, for the services of structural engineering draughtsmen employed by the sub-contractors in performing what is part of the architect's duty and for which he is remunerated as already outlined above. This mode of procedure does not free the architect from the full responsibility to the employer for the drawings, etc., so prepared; and an action brought by the latter against him for neglect can be maintained. The liability cannot be shifted to the general estimator or sub-contractor, as their responsibility is the carrying out of the drawings, etc., approved by the architect. Such arrangements also do not usually come to the knowledge of the employer, who is liable to the general contractor only. Further, they have been criticised as *infra dig* on the part of the architect, especially where contracts of large magnitude are involved, and he consequently benefits greatly. It would seem, therefore, more satisfactory in such instances for the specialist who actually prepares the drawings and calculations for the steelwork, etc., to be employed and paid direct by the employer, who would then know all the circumstances.

Architects' Authorities.

In this connection it must be realised that an architect or a surveyor has no implied authority to bind the employer in any arrangements he himself makes with specialists, unless the contract makes provision for him to exercise such authority and discretion; and even then any arrangements made by him must be in accordance with the provisions of the general contract. Also, when once a sub-contract is entered into between the general contractor and a specialist or sub-contractor, the architect has no power to alter or vary it, or indeed to give orders to the sub-contractor direct concerning it, even if he is prepared to make due allowances for such variations to the general contractor in adjusting the latter's final account. The circumstances, however, in which an employer or his architect may have dealings with specialists or sub-contractors may at all times invite the inference that the employer has rendered himself liable to them direct.

Architects' Remuneration.

An architect is only entitled to recover a reasonable remuneration for his services in the absence of any agreement with the employer; and it is certain that his remuneration would be in danger of considerable reduction if the fact was established that so large a portion of the responsible structural part of the work had been done under the conditions above referred to, viz., by a structural engineer.

Co-operation of Architect and Specialist.

It therefore seems preferable that in all these matters a definite understanding and arrangement should be made with the employer beforehand, such as would relieve the architect of responsibility and anxiety for the safety of the structural steelwork and throwing this responsibility on those who actually design and make calculations for it. To this end a professional structural engineer should be employed by the employer to co-operate with the architect, and paid on commission, and employed in the same manner as the architect himself.

CORRESPONDENCE

[While we are glad to publish letters on professional and other matters of interest to our readers, it must be understood that we do not necessarily endorse the remarks or correspondents, who will oblige us if they will express their views as briefly as possible.]

Exemption from R.I.B.A. Examinations.

Sir,—Your correspondent X.Y.Z., in calling attention to the exemptions from the R.I.B.A. examinations, opens up a wide and somewhat vital question, though he measures it only in terms of injustice. "Loading the dice" in the way indicated was, I feel sure, never intended; but, though a member of the Institute, I am not "au fait" with the minds and intentions of those who frame and direct its policy. It might possibly be better if, in the elections, we had a policy instead of a name to vote on. Then, again, one has to remember that such a procedure is always open to abuse and huckstering by self-interested parties jockeying for position. However, what is of paramount importance in this matter of exemptions is the broad question of whether or not they are a sound policy—and are they for the betterment of architecture?

As far as the Schools themselves are concerned, there can be no gainsaying that they have, in recent years, revolutionised æsthetics and design. Compare the designs of twenty years ago and the general level of those prepared by the qualified men (or ladies) of today, and the contrast is positively startling due in no small measure to the influence of the Schools. As it is rightly the avowed policy of the R.I.B.A. to foster, encourage and advance the art of architecture, it certainly follows that it is their bounden duty to encourage the Schools.

Now comes the question, "Is the encouragement overdone?" It might seem that the R.I.B.A. is becoming an annexe of some of our universities, or, as a fairly prominent member of the profession asked "Will the R.I.B.A. eventually become the old boys' association for our Schools of Architecture?" Is the R.I.B.A. becoming subservient to the Schools? These are pertinent questions, for we may be getting into the habit of accepting the consequent impression that as the Schools lead the art so they lead the practice. They do not and never will. Imagination and realities are opposites, and purple shadows and wistaria are meaningless to the builder and craftsman. No professional man in his right senses would take a School pupil into his office, even after a five-years' course, and immediately put him in complete charge of a job from design to final settlement without supervision. Apart from any result accruing to the employer, it would be grossly unfair to the pupil himself, for he knows nothing of the handling or practical control of the multitude of organisers and craftsmen that go to evolve modern building; not to mention an appreciation of local conditions. That control can only be gained by constant personal contact with the multitude and not from text-books, individual dons, or occasional visits to building sites and works; that statement brooks no denial.

Now, it being patent that the "fledgling" must be guided and protected until he has acquired that indispensable perquisite, "building sense," it follows that it is wrong for the R.I.B.A. to hall-mark him before he has done so, because if the public accept a standard of service they expect it to be fully competent and able to safeguard their interests in every way.

Public confidence can only be maintained by a rigid adherence to principles and standards. Therefore it would seem that the R.I.B.A. diploma should only be granted when a candidate is in every way qualified. I would suggest that a period of practical experience be incorporated in the necessary standards to gain the diploma, for it does not follow that when a School of Architecture is satisfied with a pupil the world will also be satisfied. Exempting from examinations is of little import provided that the ability in every way is fully proven in practice.

R. D. Robson.

ILLUSTRATIONS

Friends' College, Chengtu.

We give this week a perspective view of the exterior of this building, which has been recently completed from the designs of Mr. Arnold Silcock, F.R.I.B.A. The building is designed in Chinese style, and built with Chinese materials, but the plans provide a modern college building on Western lines, adapted in arrangement to the semi-tropical climate and local conditions. We shall publish next week a fuller description of the work, together with some further illustrations.

Chapel of SS. Michael and George.

The Chancery of the Order of Saint Michael and Saint George had long felt that the Sovereign's throne and that of the Prince of Wales and Chancellor were not sufficiently dignified and distinctive. They therefore instructed Mr. Mervyn Macartney, the architect to the Order, to submit designs embodying their views. The drawing from this year's Academy shows the scheme adopted by them and which is being carried out by Mr. Henry Poole, A.R.A., in conjunction with Messrs. Maides & Harper, of Croydon. The general motive of the design is founded on the carved work of the stalls in the choir. The perspective was drawn by Mr. A. Pilkington, of Bramley, Hants.

"Willing House," Gray's Inn-road, W.C.

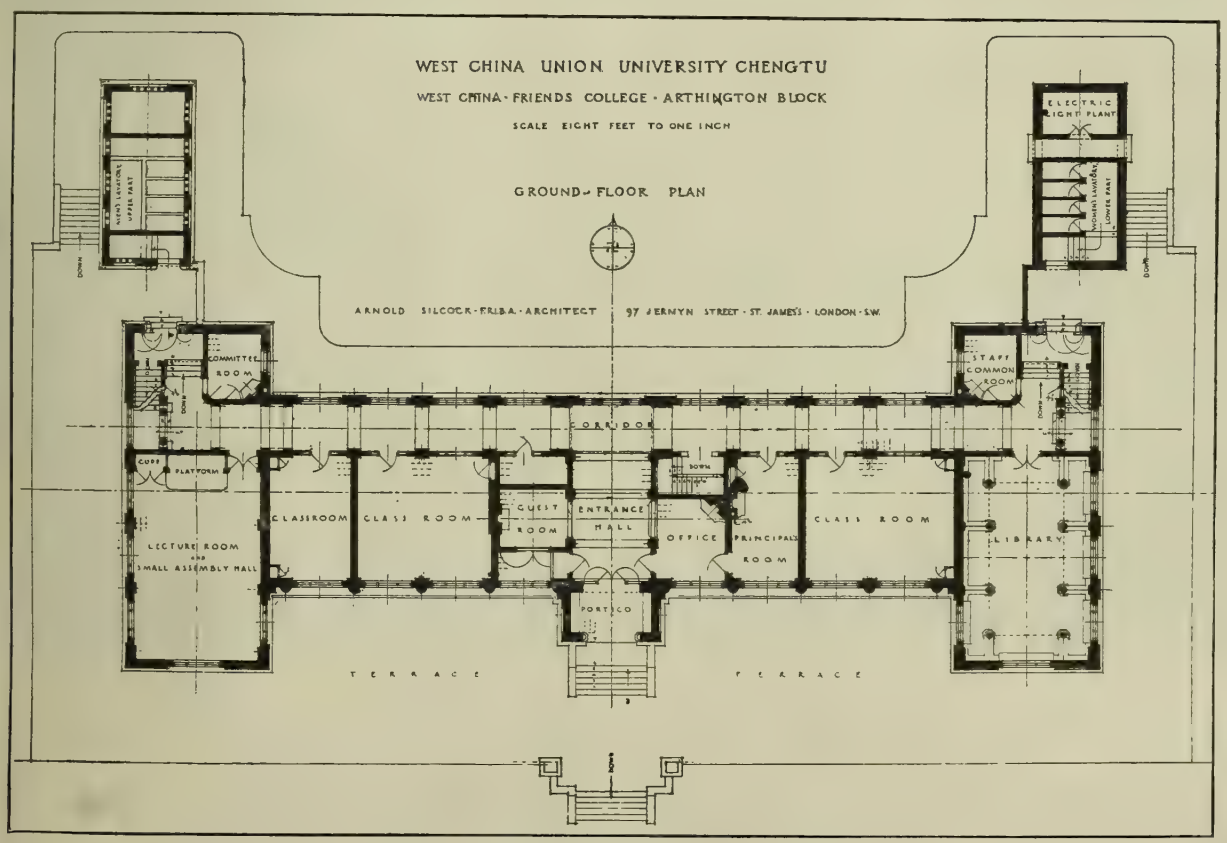
This drawing shows an extension of office premises recently erected for Messrs. Willing & Co., Ltd., advertising contractors. The original building, carried out in 1910, has had considerable influence on the present design. The front is in Portland stone, with Westmorland green slate roof. Windows are bronze casements with lead lights, and the entrance gates are in wrought-iron. The accommodation provides for large offices on the lower floors and smaller offices over, all communicating with the original building, and provision has been made for three flats in the roof. All floors are served by an automatic push-button passenger lift, and the floors throughout are warmed by central hot-water heating.

The contractors were Messrs. Dove Bros., Ltd., and the sub-contractors were as follows : Powers & Deane Ransome's, Ltd., steelwork; W. Aumonier & Son, stone carving; C. E. Welstead, Ltd., casements and lead lights; Cashmore Art Workers, wrought-iron gates, etc.; Waygood-Otis, Ltd., passenger lift; Rosser & Russell, Ltd., hot-water heating; and Blackburn, Starling & Co., Ltd., electrical installation.

Messrs. Hart & Waterhouse were the architects.

New Roman Catholic Church, Rye.

This new church is being erected in Watchbell-street, and the architects, in their design, have endeavoured to provide something not only in harmony with the picturesque surroundings, but interesting in itself. The new building is in the Spanish Romanesque style and, owing to the limited site, is hemmed in between dark brick buildings, hence the introduction of a west front finished with stone and white cement. This front is being set back to form a forecourt with an arcaded portico. The plan of the church consists of a nave with arcaded columns carrying a clerestory, and aisles terminated with small chapels at the east ends. The chancel or sanctuary has arched and barrel-vaulted transepts, and the east end is terminated with a small apse. Over the sanctuary is an octagonal dome, 14 ft. diameter, and this will be a conspicuous feature as seen from the surrounding country. The dome is to be tiled with old tiles, and the walls of the dome will be of white cement. In the whole of the external work, small-sized old bricks, mingled with other new bricks to tone, are being used, and the roof generally roofed with old sand-faced tiles, so as to give an effect as old as possible consistent with the local surroundings. A small campanile is being added at the west end. The external stone dressings are of Monks Park stone, and internally the arcade columns, chancel arch, etc., of Corsham Down stone. The face of the internal walls will be of stippled lime plaster, and the roof of Columbian pine, which it is proposed to paint at a later date. All joinery work is in Japanese oak, specially toned down and waxed polished internally. The flooring will be of oak wood blocks in the nave, with aisles of tiles, and the sanctuary flooring of Terrazzo paving, with Sienna marble altar rails. The church will seat about 130 persons.



The contractor for the works is Mr. J. Dennis, of St. Albans; and the architect is Mr. John B. Mendham, A.R.I.B.A., of London.

"Frogden," West Heath-road, Golders Green.

This house has been built for Mr. Edward Platt on the site of an old tennis court, and contains an entrance hall, large sitting-room, dining-room, kitchen, etc., on the ground floor, with front and back staircases, and box-room, four bedrooms, two bathrooms, etc., on the first floor. It is constructed with 11-in. hollow walls of yellow stock brick whitened, and with a tiled roof. The contractors were Messrs. Ward & Paterson, of Westminster. Sanitary fittings were supplied by Messrs. Bolding & Sons. Hot water is provided by a "Glow-worm" boiler.

Mr. J. O. Cheadle, A.R.I.B.A., A.R.C.A., of 2, New-square, Lincoln's Inn, W.C.2, is the architect.

OBITUARY

Mr. Maurice C. Hulbert, A.R.I.B.A.

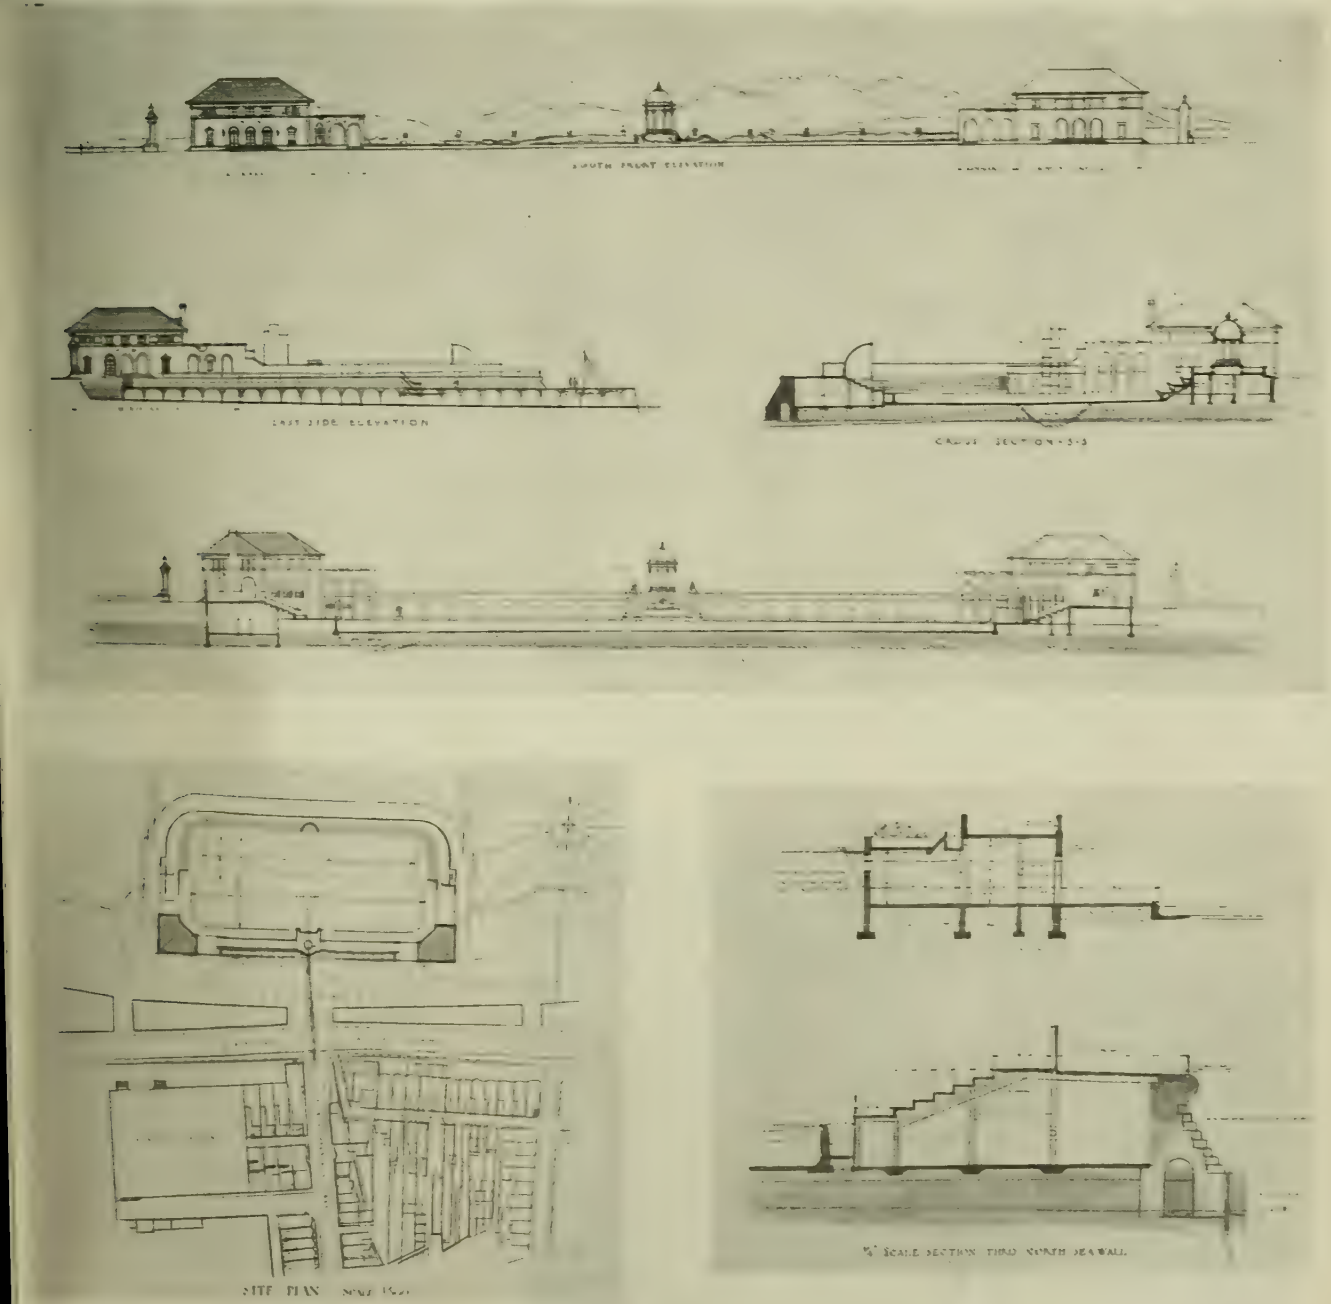
Mr. Maurice Charles Hulbert, A.R.I.B.A., .P., of Ealing, whose death we regret to nnounce, was elected a member of the In- itute in 1881. He unsuccessfully contested ie election of Sir Herbert Nield, K.C., as ember for Ealing, Acton and Chiswick, and r some while took an active part in political ffairs in that constituency. He lived for me years in Bedford Park, and about that me was engaged in modernising house pro- erties, chiefly in the West End of London, s well as erecting a block of flats in the eighbourhood of Fulham and West Kensing- on. Occasionally he attended meetings of he R.I.B.A., but rarely took part in discus- ions on professional questions.

Mr. J. D. Milner.

The death is announced of Mr. James Donald Milner, F.S.A., Director of the National Portrait Gallery. The son of the late Mr. James Milner, he was born on November 20, 1874, and his whole career was spent in the service of the National Portrait Gallery.

Mr. Roland B. Chessum.

We deeply regret to record the death of Mr. Roland B. Chessum, the well-known London building contractor. He died after a brief illness of only 48 hours, having been taken ill at midnight of Wednesday to Thursday last, and he passed away at 1.15 on Saturday morning, the 20th inst.



Roland Bruce Chessum was born in 1865 at Hollybush Lodge, Green Lanes. He was educated at Eagle House School, Tottenham Green, and entered the business of his father, Mr. Jesse Chessum, a building contractor, with whom he served his apprenticeship, afterwards becoming a partner with his brother in the firm of J. Chessum and Sons. This was afterwards turned into a limited company, and on the retirement of his brother, for some years Mr. Chessum carried on the business alone, being joined on the board lately by his son, Mr. Bruce Chessum.

For many years the late Mr. Chessum was closely associated with the various organisations of the building industry in negotiations with the architects, operatives and other bodies. He was a past-president of the London Master Builders' Association, had held office in the National Federation of Building Trades Employers of Great Britain and Ireland, and the Institute of Builders, and at the time of his death was the president of the International Federation of Building and Public Works.

The building industry has lost one of its most devoted and capable servants, whose sudden passing away will be deeply regretted by a wide circle of friends.

Architect's Estate.

Mr. Thomas Purves Marwick, F.R.I.B.A., of West Mayfield, Edinburgh, and of Yorkplace, Edinburgh, architect, left (in addition to real estate, personal estate in Great Britain) £52,277.

Open-air Bathing Pool Competition, Morecambe: Second Premiated Design.

By Mr. Thomas H. Mawson.

THE BRITISH ARCHÆOLOGICAL ASSOCIATION

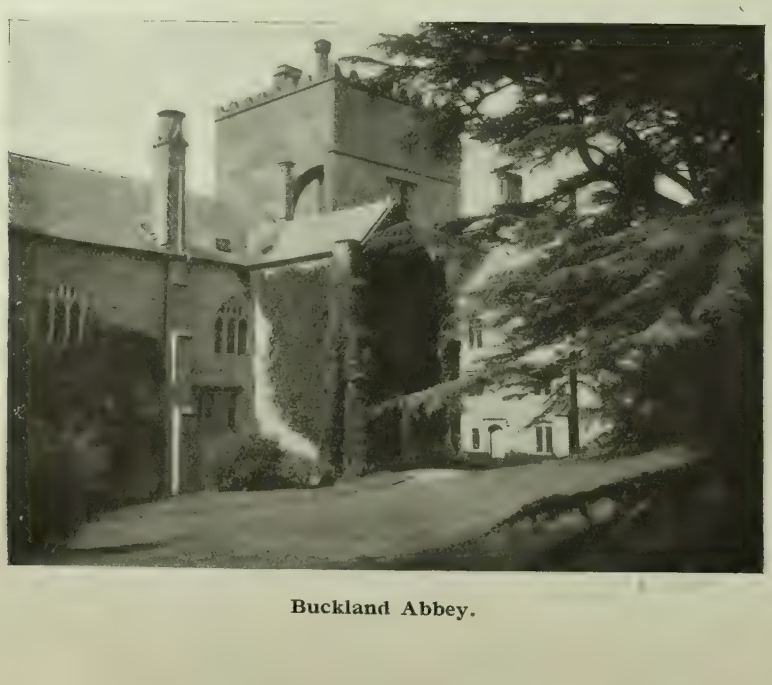
EXETER CONGRESS—II.

(Continued from last week's issue.)

TUESDAY, JUNE 28 (Continued).

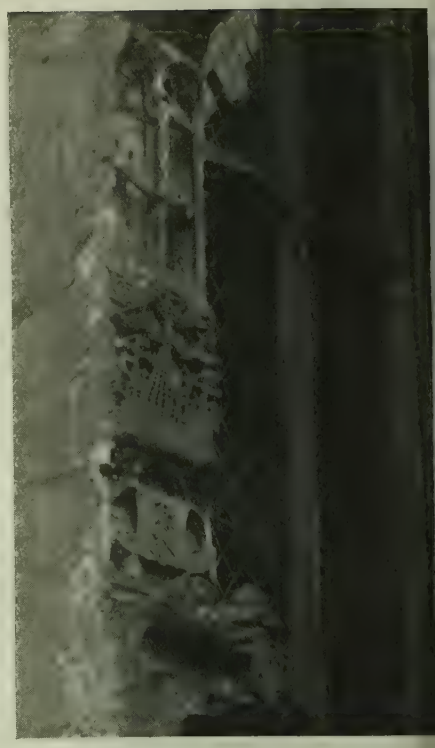
After luncheon at Tavistock the party drove to Buckland Church and Abbey, where they were hospitably received by Lord and Lady Seaton, who is the daughter of the late Sir Francis Fuller Elliott Drake, Bart., descendant of the great Sir Francis Drake. Drake's drum is here, the cherished possession of the family, of which Sir Henry Newbolt sings :—

"Take my drum to England, hang et by the shore,
Strike et when your powder's runnin' low; If the Dons sight Devon, I'll quit the port o' Heaven,
An' drum them up the Channel as we drummed them long ago."



Buckland Church is a fine and little-known church of which not much notice has been taken by antiquaries. The full name of the village is Buckland Monachorum, and the church is dedicated to St. Andrew. Mr. Johnston described it, and the party were welcomed by the vicar It is mainly Perpendicular in style, and was originally cruciform. It consists of a nave and side aisles, which extend to the length of the chancel. The nave roof is supported by corbels carved into angels bearing musical instruments, which are remarkable as being a complete record of the musical instruments of the period. The south chapel has a granite vaulted roof, which is unusual. The chancel arch is not symmetrical, and is supported by a curious bent sort of capital. There are a number of image brackets. Mr. Johnston deplored the skinning of the walls and the removal of the plaster, which has become a fashion with some architects. Originally interior walls were always covered with plaster, and the removal of this destroyed all vestiges of any mural paintings which were common in old churches. He remarked on the large aumbry in the chancel, but this turned out to be a door into the vestry which had to be closed up. The west tower has fine turrets, and in the five-light Perpendicular east window there is some ancient glass representing (in fragments) events in the life of St. Andrew. There is also a very elaborate monument, by Bacon, to the memory of Elliot Lord Heathfield, the defender of Gibraltar, with a laboured panegyric. Lord Heathfield married a daughter of Sir Francis Drake and died in 1790, and was buried at Heathfield, in Sussex. The church has a Norman tub-shaped font. This was done away with, and a Perpendicular one substituted; but the old font was found in a ditch and returned to the church.

The party then journeyed to the Abbey, and were welcomed by Lord and Lady Seaton, and, when assembled in the Hall, Lady Seaton described its contents: the Tudor ceiling which the present owners had rescued from two or three coats of paint, the Tudor fireplace which they had rediscovered, the famous drum, and a French drum captured by Lord Heathfield, Drake's portrait, his coat-of-arms showing the Pole Star, signifying that he had seen both sides of the globe, his crest, a ship going round the world, and his sword, presented to him by the Mayor of Plymouth, and his Bible, which he carried with him round the world. The Abbey belonged to the Order of the Cistercians, was founded in 1278 by Amicia, Countess of Baldwin de Redvers, Earl of Devon, and daughter of Gilbert Clare, Earl of Gloucester and Hereford. It was colonised by monks from Quarr Abbey, in the Isle of Wight. At the Dissolution, Henry VIII gave it to Sir Richard Grenville in 1541, who destroyed the greater part of the buildings, and converted the Abbey church into a dwelling. In 1581 it passed into the hands of Sir Francis Drake, and has remained ever since in the hands of his descendants. Lady and Lord Seaton conducted the party over the house, entertained them to tea under the trees in the garden, and after this they visited the tithe barn. 180 ft. long, and wandered in the beautiful grounds.



Leaving the Abbey, the party returned to Exeter via Yelverton and Princetown, observing the gloomy convict prison. In the evening, after dinner, the President lectured on "The Misericords of Exeter Cathedral, compared with those of Chester and Ely," with numerous lantern-slide illustrations.

WEDNESDAY.

This morning was devoted to the exploration of Tiverton and Cullompton, and the afternoon to Exeter Cathedral. Tiverton church, dedicated to St. Peter, was described by the Rev. E. S. Chalk, B.D., together with notes by Mr. Johnston. It has a Norman north doorway, the only Norman feature. It is a beautiful Gothic structure dating from the fifteenth century, built for a thriving

Buckland Abbey.

Details on Greenway Chapel, Tiverton Church : Anchor, Ship, Merchant's Mark and Grasshopper.

West of England town of wool-workers. A stone church is said to have been built b Bishop Leofric in 1073. The Norman doo way just mentioned is a relic of this church The tower, 116 ft. high, is a fair example o the West Somerset type and is the fines in Devon. John Greenway, a wool merchan of the town, has left his mark upon th church. He founded the chapel that bear his name in 1517 and the south aisles. H inserted the didactic verse :—

"Whilst we think well, think to amend.
Time passeth away and death's the end."

Mr. Johnston pointed out that the tw arcades of the nave were rebuilt in 185 The white stone is ancient, while the yello stone is new. There are a large number o niches, some old and some new. The re storers left the string course surrounding th church. The external gargoyles are moder copies of the old. The whole exterior of th church is covered with lavish decoration consisting of ships, woolpacks, staple-mark figures of men and children and horses inscriptions, merchant adventurers' an drapers' arms. John Greenway caused to b placed round the corbel table of his chape representations in relief of twenty of th principal scenes in our Lord's life, begin ning with the Flight into Egypt and endin with the Ascension, all minutely carved The whole south front was rebuilt by Greer way, and is covered by similar ornament which have been partly renewed. The roo of the south porch is enriched in the sam manner. Above the inner doorway is a Adoration of the Virgin, with figures of Joh and Joan Greenway kneeling on either side The organ occupies the Woolmen's Chapel Brasses have been removed from the floo and placed on the walls, which Mr. Johnston deemed an objectionable practice. Dur ing the Parliamentary War General Fairfa attacked the church, which was garrisoned for the king, and some monuments of th Courtenays were destroyed, but the achieve ment of Katherine (Courtenay) Countess o Devon, daughter, sister and aunt of kings survives. She died in 1527. The remain of the screen in wood and stone remain.

Across the north wall of the churchyar are the ruins of the Castle of Tiverton founded by Richard de Redvers in 110 Considerable remains of the great gatewa

outer walls exist, with some tracing he Decorated style. Nothing is left of keep. For a long period it was the cipal residence of the Earls of Devon. r the death of the twelfth earl in 1566 manor was broken up and the castle ht by Roger Giffard, who built the pre- house on the site of the keep, and it is in possession of Mrs. Wingfield, who ly invited the party to visit it. After capture of the castle by Fairfax in 1645 as dismantled. Secret passages are said exist, but like most of such legends, are doubtful, and are probably drains. sites of the tilt yard, moat and earth- s are known by tradition.

ck of time prevented a visit to the houses in Gold Street, built by John nway, for five poor men in 1517. The n and chapel are decorated in the same ner as the south wall of the church, and the inscription :—

ve grace, ye men, and ever pray r the soul of John and Joan Greenway."

eagle or phœnix on a bundle of sticks ften seen in these decorations was prob- the device of Master Greenway, the ficent clothier, whose name he was de- ined should not be forgotten.

e founder of Blundell's Grammar School 4) was another rich merchant of Tiverton. timbers of the roof are said to have been oned from the wrecks of the Armada. school has had many distinguished *ni*.

e company then drove on to

Cullompton.

h possessed some fine old houses, the important being Bradfield Hall, the e of the family of Walrond, one of the t Elizabethan mansions in the county, e that family has been seated since the n of Henry III. The party could only in a glimpse of it, and would like to seen the fifteenth century hall.

ebendary Chanter, to whom the party l so much for his guidance and descrip- of the various buildings visited, de- ed the church, which, he said, was a cal Devon church. It owed much of its ty to the prosperous clothiers of the n, like Tiverton. In the time of the nesday Survey it was a Prebendal to ter, but it was entirely rebuilt in the y fifteenth century. As in many Devon ches, there is no structural division be- en the nave and the chancel. This ncel is modern, having been rebuilt in on the lines of the ancient work of stone. The roof is very magnificent is of the Somerset style. It is a waggon- covered with ribs that divide it into l rectangular panels. The rood screen, ch is very fine, extends across the nave aisles. There was formerly a rood gal- but this was removed at the restoration 49, and the whole screen repainted with e colours and gilt. The prevailing ur was formerly green, for which blue has substituted; but the screen is one of most gorgeous and most perfect in onshire. The original calvary is still erved in the room under the tower, and n wonderful preservation. It is carved skulls and bones. The holes still re- in which the figures of our Lord with of SS. Mary and John were set. One ne glories of the church is the Lane el, built by John Lane, a Cullompton ier. It is ceiled with superb fan ry vaulting springing from corbels, with ants in the centre. There is an inscrip- difficult to read, a strange instance of lifferences of opinion among antiquaries. used to be read *Wapentaki custos rius*, or "the wool-warden of the red," whereas it is now understood to with a Paternoster and an Ave"! *homines, tot sententiæ*! The noble tower erected in 1545, and is of the Somerset

short drive conveyed the party to

Bradninch Manor,

whither they were invited by the kindness of Mrs. Radford and her son, Mr. C. A. Ralegh Radford, F.S.A., who described its history and many treasures. Since the thirteenth century the Manor of Bradninch has been held with the Duchy of Cornwall. After the Reformation the advowson and tithes were granted to the Dean and Canons of Windsor, who farmed the tithes out to the family of Sainthill, by whom the present house was built. The arms of Sainthill in stained glass are preserved in a window, with the date 1563, probably that of the completion of the house. Four rooms and the staircase with the original panelling are preserved in the south wing. The original Great Hall, in which Peter Sainthill ("the Cavalier") entertained Charles I., in 1644, was ceiled over early in the eighteenth century and decorated in the classical style. Till 1861 the house remained in the families of Sainthill and Pearse. It was then sold, and after some years came into the possession of the Duchy of Cornwall. The house contains Tudor stained glass and furniture, the collection of the late Mr. A. L. Radford, F.S.A.

Among the treasures is an ancient four-posted bed with panels carved with the figures of the Four Evangelists, and doubtless its occupants have often said the words of the old prayer :

"Matthew, Mark, Luke and John,
Bless the bed that I lie on."

There are numerous pictures of persons not exactly connected with the house and its various owners, old glass, and many curios of all kinds, ancient furniture which have been collected by the late owner.

The party then returned to Exeter for luncheon, and in the afternoon visited the Cathedral, Bishop's Palace, Cathedral Library and Law Library. For the description of the exterior of the Cathedral the party were indebted again to Prebendary Chanter, while the interior was described by the Very Revd. Dean H. R. Gamble, and the Revd. Bishop.

The Cathedral is so well known that its story need not be told here, but the following notes may be useful in reminding readers of its principal features. The Cathedral is the third that has stood on this site, and has the unusual feature of an unbroken ridge from the west front, over the nave, chancel and presbytery, with towers over the transepts. A few fragments of the first building, probably built by Canute, can be seen to the north of the Lady Chapel. The second Cathedral was begun about 1112, and took nearly 100 years to build. Of this, the Norman towers, the west end wall and other outer walls up to the western part of the choir still remain, and the consecration crosses. The third and present Cathedral was begun eastward of the Norman church about 1270, in a style that we call Decorated, and which possibly may have been invented here, the first step being the five chapels, and then carried westward, being finished during Bishop Grandisson's episcopate, about 1350; the screen across the western front, containing his chantry chapel, being his last work, and left unfinished at his death. The Cathedral is the most complete and best example of Decorated architecture in England—the same style having been carried on from the time of Quivil to its completion. Grandisson declared that, as originally designed, it was destined to excel in glory all other churches of its class in England or in France, if only it could be completed. The Chapter House was originally intended to have been vaulted; it was begun *circa* 1230, and the lower portion is of this period, with arcading of clustered columns, with Purbeck marble shafts and foliated capitals. The upper part is of the times of Lacy, Neville and Bothe, whose arms appear in the roof.

Prebendary Chanter led the way to the Bishop's Palace, which adjoins the Cathedral on its south side. It was begun in 1381. Bishop Phillpotts (1831-69) thoroughly restored it, introducing some alien fragments from other buildings, including a fine oriel window removed from a house at the back of the Globe Hotel. It has a chapel dedicated to St. Mary, and there is a beautiful armorial chimneypiece in stone, called the Courtenay mantelpiece, in one of the rooms.

The Law Library was originally the Bishop's Chancery, and on the Tudor doorway are the official arms of the Chancellor. The building is noticeable for its fine hammer-beam roof, the trusses having angels bearing shields. We were glad to see the statue of Richard Hooker, known as "the Judicious," on the north side of the Cathedral Green. It was erected twenty years ago by a descendant. Hooker, the famous author of "The Laws of Ecclesiastical Policy," was Devonshire born at Heavitree in 1553, and nephew of John Hooker, Chamberlain of the City, who, as we have already noted, calendared the City Records.

The Exeter Architectural and Archæological Society kindly invited the members to tea at the College Hall in Kalenderhay, the history of which was told.

In the evening a reception of the Mayor and Sheriffs was held. If the night had been favourable it was intended to hold this in the Rougemont Gardens, but as the weather was rainy, it was held in the City Hall. A very large company of guests assembled.

The Sun Insurance Office, Ltd.

The work carried out at these premises, which are at 60, Charing Cross-road, consisted of the removal of internal walls on the ground floor so as to combine several small rooms and corridors into one large office; the insertion of a new shop-front facing Trafalgar-square, to give better lighting, and a stall-board to be used for the display of relics and mementoes of the early activities of the "Sun Fire Office." The work also involved the re-planning of the basement and the installation of a central heating system, and improved sanitation.

The general contractors were Messrs. Turnbulls, Ltd., and the strutting and shoring were carried out under the direction of the general foreman, Mr. A. S. Lambert. The following were sub-contractors:—H. Young & Co., Ltd., structural steelwork; Fredk. Sage & Co., Ltd., new shop front; J. & F. May, central heating and hot water; H. Palmer, stonemasons; Gilbert Seale, "Stuc" and fibrous plaster; Fennings, Ltd., marble and granite; the Leyland Rubber Co., rubber flooring; W. & R. Leggott, locks and door furniture.

Messrs. Hayward & Maynard were the architects.

Altar and Reredos, Bishop Latimer Church, Handsworth.

This church was built during 1903-1907 from designs by Mr. W. H. Bidlake, M.A. It was the gift of an anonymous donor, and was dedicated to the memory of Hugh Latimer, Bishop of Worcester, who was burnt at the stake in 1555. The altar and reredos, of carved oak, have been added recently, the upper part of the reredos still remaining to be completed. The carving is by Messrs. H. H. Martyn and Co., Cheltenham.

Messrs. Bidlake and Knight, F. and A.R.I.B.A., are the architects.

New Science Block, Bedford High School.

This new building, recently opened by Her Grace the Duchess of Atholl, M.P., Parliamentary Secretary to the Board of Education, has been erected at the south-east corner of the school playground, and is connected to the main school building by an ornamental glazed covered way. The approximate cost was £13,000. The plan of the building is arranged on two floors with a flat roof. The entrance to the hall on the ground floor is through a pair of oak folding glazed doors, the rooms on the ground floor being used for cookery and laundry, elementary physics, and elementary chemistry. The first floor is approached by a well-proportioned staircase with iron railings and oak handrail, and is planned for elementary and advanced botany, advanced chemistry, lecture-room, preparation-room, and dark-room, etc. There is a cloak-room on each floor, with lavatory accommodation.

All the rooms are fitted with iron casements and plate-glass windows, and the building is heated by low-pressure hot-water system, the boiler being placed in the basement. The ventilation is natural by special gear for opening the windows above the transoms, and the building is lighted by electric light. Internally the whole of the walls are of Collier's white bricks with neat-painted dados in the corridors, hall, and landing. The floors of all the rooms are in pitch pine laid on reinforced concrete floors. Each laboratory is well equipped with the latest designs of pitch pine and teak top benches with sinks; and gas, water, and electricity supply to each room. The laundry and cookery rooms are fitted up with all the latest laundry fittings, and the cookery with the necessary sinks, kitchen range, electric and gas cookers. The building is erected in red bricks with Weldon stone dressings.

The general contractor was Mr. W. Laughton, of Midland-road, Bedford, and the whole of the laboratory fittings were by Baird & Tatlock, of London. The heating and electric light installations were carried out by H. Bacchus, of Bedford. The design of the buildings and the whole of the detail work and design of the fitments has been carried out by the Surveyor to the Harpur Trust, Mr. George P. Allen, F.R.I.B.A.

Other Illustrations.

We publish this week the second premiated design in the recent competition for an open-air Bathing Pool at Morecambe, by Mr. Thomas H. Mawson. The first premiated design, by Messrs. A. W. S. and K. M. B. Cross, was given in our issue for August 12. We also give an illustration of All Saints' Church, Hackbridge, Surrey, for which Mr. H. P. Burke Downing, V.P.R.I.B.A., is the architect.

OLD BUILDINGS IN LONDON

In the course of a letter to the *Times* on this subject, Sir John W. Simpson, P.P.R.I.B.A., writes as follows:—

"Old buildings in the streets of London—erected at periods varying from the 16th century, or even earlier, to the earlier years of Queen Victoria—are now being subjected to disruptive forces which their construction is unfitted to sustain, and were never anticipated by those who built them. Of these forces or strains the most fatal is, in my opinion, the violent and incessant vibration of heavy traffic rolling on hard roads. A brick wall such as those of which old London is built is formed of thousands of more or less irregular fragments of burnt clay that, unlike dressed stones, could not be piled one upon another to the height required without the introduction of a cementing substance to equalise their bearings and bind them together. The substance generally used was a mortar composed of lime and sand, roughly mixed and varying in proportion according to the conscience or skill of the labouring man who compounded it, or the honesty of his employer. The bulk of the wall is thus formed of two easily disintegrated materials—bricks and sand—precariously united by the addition of a small amount of lime. Not only was the lime often deficient in quantity, but it has, in course of time, perished altogether. When supervising the demolition of high walls and chimneys, I have observed free sand spilling from the brick joints every time a heavy vehicle passed in the adjoining street.

"Although these old brick buildings might have stood for many years to come in a state of what I may call suspended equilibrium, another disturbing cause is hastening their decay. The subsoil of London has been, during recent years, riddled with deep excavations for buildings and sewers, and bored for an immense number of wells. All these have helped to drain and dry the ground on which the old buildings stand. Their foundations are seldom good. It is, as Mr. Beck rightly said, rare to find that any precaution has been taken to distribute their load scientifically over an adequate area, and to their original load upper stories have been recklessly added. Walls were started from shallow excavations, and even 'footings'—the spreading courses of brick required by the Building Act of 1894—are quite exceptional. The original margin of safety in this respect was usually very small. Moreover, the effects of constant shaking were not foreseen when the Building Act and its amendments were passed, and further provisions will need to be considered in the light of the troubles I have mentioned.

"The care of old buildings is becoming an anxious matter, and owners of such property should recognise the need for periodical surveys and watchful supervision. Accurate plumbings should be made from time to time and registered for reference and comparison, for the life of many ancient structures has been shortened of late, and we must expect further failures. . . . There is no more competent class of professional men than the district surveyors appointed under the Act of 1894 after a severe statutory examination. But they have large areas to supervise, and cannot be always present during building operations which involve the shoring of old structures. Builders' foremen are, as a rule, very clever in carrying out such work; but the architect in charge should always superintend it to direct which constructional points should be selected for support and how the loads should be transmitted to secure abutments."

R.I.B.A.

Following are notes from the minutes of the Council, July 25:—

British Architects' Conference.—A vote of hearty vote of thanks was passed in favour of all those who offered hospitality and assisted in connection with the recent Conference.

Presentation of Greek Vase by Mr. Greville Montgomery (Hon. A.R.I.B.A.).—The Council accepted, with much pleasure, a Greek vase, probably of the fourth or third century B.C., presented to the R.I.B.A. by Mr. Greville Montgomery, and expressed their cordial thanks to him for his generous gift.

Comité Permanent International des Architectes.—The British Section of the C.P.I. was reconstituted as follows:—

Sir Reginald Blomfield, R.A., Hon.D.Litt., 1, New-court, Temple, E.C.4.

Sir John J. Burnet, R.A., R.S.A., Hon. LL.D., 1, Montague-place, W.C.1.

Lt.-Col. H. P. Cart de Lafontaine, O.B.E., 6, Gray's Inn-place, W.C.1.

Sir Banister Fletcher, F.S.A., 1, King's Bench-walk, Temple, E.C.4.

Mr. H. M. Fletcher, M.A., 2, Gray's Inn-square, W.C.1.

Mr. Ian MacAlister, Secretary, R.I.B.A.

Professor C. H Reilly, O.B.E., School of Architecture, University of Liverpool, Liverpool.

Mr. Howard Robertson, 36, Bedford-square, W.C.1.

Sir John W. Simpson, K.B.E., 3, Verulam Buildings, Gray's Inn, W.C.1.

Sir Aston Webb, G.C.V.O., C.B., R.A., 19, Queen Anne's-gate, S.W.1.

International Congress at Amsterdam.—Lt.-Col. H. P. Cart de Lafontaine was appointed as the R.I.B.A delegate at the International Congress to be held at Amsterdam from August 20 to September 4, 1927.

Conference of Public Lighting Engineers at Brighton.—Mr. J. L. Denman, A.R.I.B.A., was appointed as the R.I.B.A. delegate to the Fourth Annual Meeting and Conference of the Institution of Public Lighting Engineers to be held at Brighton from September 12 to 15.

Competition for League of Nations Building at Geneva.—It was decided to make arrangements for holding an exhibition at the R.I.B.A. of the designs submitted by British competitors for the League of Nations Building at Geneva.

Birmingham Civic Centre Competition.—It was decided to make arrangements for holding an exhibition at the R.I.B.A. of the designs submitted for the Birmingham Civic Centre Competition.

Studentship.—The following Probationers were elected Students of the R.I.B.A.:—

Ellen B. Alexander (University of Manchester), W. R. B. Bertram (Glasgow School of Architecture), J. E. W. Dallachy (Glasgow School of Architecture), G. A. Goldstone (University of Manchester), G. I. C. Hill (Architectural Association), L. E. King (University of London), W. H. McNicol (University of Manchester), M. S. Smith (Special Exemption), Ruth M. Tinker (Architectural Association), R. Ffolliott Willis (Architectural Association), Alan Woodrow (Architectural Association).

Resignations.—The following resignations were accepted with regret:—

A. O. Cave, F.R.I.B.A; W. G. Pidsley, A.R.I.B.A.; A. J. Phillips, L.R.I.B.A.

Application for Election as Subscriber.—One application was approved.

Application for Election as Licentiate under Section III (f) of the Supplemental Charter of 1925.—One application was approved.

LEGAL SECTION

NOTES ON CURRENT CASES

MAKING UP PRIVATE STREETS

In the recent case, Sunderland Corporation v. Priestman (1927, 2 Ch. 107), questions of considerable complication arose in connection with making up certain roads under the Public Health Act, 1875. By an agreement dated November 19, 1879, made between the Ecclesiastical Commissioners and the Sunderland Corporation, 13 acres of freehold land had been conveyed to the Corporation for the formation with other land acquired from an adjoining owner of a public park, the consideration for this conveyance being the provision by the Corporation of a sum of £2,500 for the erection by them to the satisfaction of the Commissioners' surveyor of a bridge and road over the Roker Gill and of three new roads forty feet wide. It was further provided by this agreement that as the Commissioners intended to lay out lands on the north side of road *B* to *D* and the west side of road *D* to *C* for sale as building sites, whenever, within 21 years, they should sell or convey any building site fronting on the above two roads, they would sell or convey the same to any purchaser subject to an agreement on the part of the purchaser to pay to the Corporation such a proportion of one moiety of the expenses incurred by the Corporation in making and completing the same as the extent of frontage of the land so conveyed bore to the whole length of the road.

By a lease dated June 12, 1885, the Commissioners had demised to R. Shadforth a plot of land on a building lease fronting on the road *B* to *D* for a term of 999 years from June 24, 1883, at a peppercorn rent until September 29, 1884, and thereafter at the yearly rent of £53, and the lease contained, amongst others, the following covenants by the lessee:—(1) that he should pay all taxes, charges, assessments, impositions, and outgoings, including all costs of and rates for paving, draining, or other improvements or works upon or under the said plot of land or any road or roads then or thereafter abutting upon or adjoining the land demised which any local board or other local authority might lawfully require to be paid by the owner or occupier; (2) within twelve months of these presents (if the road or roads abutting on the said plot had not been taken over by the local authority before the expiration of such period) he should pave, flag and channel such road or roads so far as they were co-extensive with the said plot; and (3) that within twelve months of these presents he should pay to the Mayor, etc., of Sunderland "such a proportion of one moiety of the expenses incurred by the said Mayor forming and completing the roads" as more the proportion specified above. It may be said here that the Court intimated that it was plain that the lease was framed on the footing that besides the lessee's liability to pay to the Corporation in pursuance of the agreement of 1879, some part of the expenses incurred by them in making up the roads, the lessee was also to be under liability to pay to the local authority charges for paving and making up the road.

The actual conveyance of the thirteen acres by the Commissioners to the Corporation was dated December 31, 1889, and in that conveyance it was recited that the roads *B* to *D* and *D* to *C* had not then been completed, the concreting of the footpaths having by agreement with the Commissioners been deferred, and the Commissioners were satisfied that the sum due of the sum of £2,500 would be expended by the Corporation in forming, making, and completing the last-mentioned roads, and the covenant as to inserting in the conveyance made by the Commissioners a clause as to the contribution by the purchaser was repeated in this conveyance but with a reference to the footpaths not having been concreted at that date. A house had been duly erected by R. Shadforth, and the defendant in these proceedings was his successor in title, but the two roads in question did not become part of the Borough of Sunderland until 1895.

From the above conveyance it appears that the bridge over Roker Gill with the road over it had been made and completed to the satisfaction of the Commissioners' surveyor, but that the roads *B* to *D* and *D* to *C* were incomplete as to the footpaths which had to be concreted, and so far as can be gathered from the report, that had remained the position until 1923. On July 31, 1923, the Corporation gave notice under section 150 of the Public Health Act, 1875, requiring the defendant amongst other frontagers to make up the road *B* to *D* which was now called "Side Cliff," and on the frontagers' failing to comply with the notices the Corporation made up the road themselves at a cost of £1,624 13s. 4d., and on March 4, 1925, notice of the sum due from the defendant as apportioned by their surveyor was served on the defendant. The sum thus apportioned was £388 8s., but this was subsequently reduced to £379 15s., and a demand for payment of this sum was made on August 11, 1925. Payment not having been made, a summons was taken out on October 3, 1925, asking for an order of the Court declaring the said sum to be a charge on the premises as from August 11 with interest at 5 per cent. (under section 257 of the Public Health Act, 1875) and the costs of the proceedings.

On the hearing of this summons, the defendant raised two points. Firstly, it was contended that section 257 confers two remedies: firstly, the right to take summary proceedings to recover the sum due, which remedy must be taken within six months; and secondly, a right to enforce the charge created on the premises; and that the second of these two remedies cannot be resorted to until the time within which the first can be taken has elapsed. In the second place, it was contended that, as it was shown by the conveyance of 1889 that the Corporation had not spent all the money which they were under obligation to spend on the roads under that conveyance, and they had not spent it since, they could not be heard to say these roads were not made up to their satisfaction, because it must be assumed against them that they had done everything that they ought to have done and made up the roads to their own satisfaction in the past, and spent all the money they ought to have spent in doing so.

The first of the above points is that of the greatest public interest. The Court held that the two remedies provided by section 257, the personal remedy to be enforced in a court of summary jurisdiction and the statutory charge, are concurrent and independent, and there is no obligation in the chargees to exercise their personal remedy before they enforce their charge, nor need they wait until the expiry of the six months during which the personal remedy can be enforced before seeking to enforce the charge in the High Court. The Court, in this finding, relied upon a dictum of Lord Justice Brett (as he then was) in Tottenham Local Board *v.* Rowell (15 Ch. Div. 378).

On the second point the Court held, first, that there was not evidence upon which it could find that all the money had not been expended, but secondly, that it was immaterial whether it was spent or not, for in 1879, when the agreement was entered into with the Ecclesiastical Commissioners, the Corporation was not the local authority for this area, but entered into that contract as any other individual or body might enter into a contract, and by that contract they undertook to make up the roads to the satisfaction of those Commissioners. It was immaterial whether or not the roads were completed, for in no case could the Corporation be said to be estopped from saying the roads were not made up to the satisfaction of the Corporation within the meaning of section 150 of the Public Health Act, 1875. The standard required by the Commissioners might be different from the standard by which it was necessary for the local authority to work in exercising their statutory powers under section 150; and further than this, the Court laid it down that where there is a public body having statutory duties to perform, and a statutory discretion to exercise, they can do nothing beforehand outside their statutory duty and acting as private contractors which can possibly be permitted to estop them from performing their statutory duty or exercising their statutory discretion.

This second ground of defence is a little difficult to follow. We have set it out as far as possible from the words used in the judgment as reported, and, so far as we understand it, it rather supports the observations we made in our third article on "Making-up New and Private Streets," August 20, 1926, on the case Barry *v.* Cadoxton Local Board (1895, 2 K.B. 110). We pointed out that that case is cited in some text books as an authority for the proposition that as regards other works than sewering a local authority can make up a street over and over again at the cost of the frontagers until it is taken over by the local authority, and there are expressions in the judgment of Mr. Justice Charles which support that view; but as a matter of fact, in that case the local authority had not previously exerted their powers under section 150, but another authority in the district of which the streets then were had simply approved the plans and specifications put forward by the owners of the land when laying out the streets. This approval, just as the previous contract made with the Commissioners in the case we are considering, was held not to prevent the local authority from exerting their statutory powers under section 150. When those powers have once been exerted, we pointed out that now, both under the Public Health Act, 1875, as well as the Private Street Works Act, 1892, when a street has once been made up, the majority in value of the owners can call upon the local authority to take it over. As regards the Public Health Act, this amendment was introduced by section 82 of the Public Health Act, 1925.

One other observation may be made in connection with this case. In our fourth article on "Making-up Streets," August 27, 1926, we drew attention to the fact that under the Public Health Act, where the apportionment is not questioned either by applying for arbitration within three months from receipt of the notice or by an appeal to the Minister within 21 days of the demand for payment, then, as regards the actual apportionment, it becomes binding and conclusive, and cannot be questioned in any subsequent proceedings, but that questions which go to show that the whole proceedings are bad can be raised when proceedings are taken to recover the sum.

In the case under consideration the actual sum apportioned seems not to have been questioned, and the first defence as to time clearly went to the extent of questioning the validity of the whole proceedings; but the second defence appears to raise more difficult points, but appears also to have raised an objection as to the whole liability. No question was raised on this point before the Court, and we therefore assume it did; and therefore it appears that such a defence can be raised not only in the summary proceedings, if any are taken to enforce the claim, but also when application is made to enforce a charge.

THE LONDON BUILDING ACTS AND THEIR APPLICATION—XXV.

By H. V. MILNES EMERSON, A.R.I.B.A.

Section 107.—This section provides for proceedings to enforce compliance with notice served by the Council for work to be done to make a structure safe. If the owner disputes the necessity of any of the requirements comprised in the notice, he may, by notice in writing to the Council within seven days from the service of the notice upon himself, require that the matter be referred to arbitration, and he may at the same time appoint an independent surveyor to report, in conjunction with the district surveyor, upon the condition of the structure, and such matters in dispute which cannot be settled between them shall be referred for final decision to a third surveyor acting as arbitrator. The notice requiring arbitration must contain the name of the surveyor appointed, otherwise the notice is not effective, and if the appointed surveyor and the district surveyor fail to report within seven days, the matter must then be dealt with by the arbitrator, such arbitrator having been appointed by the two surveyors concerned, or, in the event of their disagreeing, by a Petty Sessional Court on the application of either of them. The appointment of the arbitrator must be made before the owner's surveyor and the district surveyor enter upon the decision of the question in dispute, otherwise, in the event of a disagreement between the two surveyors, the matter would drop, as an arbitrator could not then be appointed. The arbitrator appointed must make his report within fourteen days.

Section 108 provides that notwithstanding a notice to refer the matter to arbitration the Council can obtain a Court order to pull down, repair, or secure such structure should the same be in such a dangerous condition as to require immediate attention.

Section 109.—(1) All expenses incurred by the Council in relation to the obtaining of any order as to a dangerous structure and carrying the same into effect under this part of this Act shall be paid by the owner of the structure but without prejudice to his right to recover the same from any person liable to the expenses of repairs.

(2) If the owner cannot be found or if on demand he refuse or neglect to pay the said expenses the Council after serving on him three months' notice of their intention to do so may if in their discretion they think fit sell the structure, but they shall after deducting from the proceeds of the sale the amount of all expenses incurred by them pay the surplus (if any) to the owner on demand.

Note.—The expenses provided for in this section are in addition to those payable to the district surveyor, etc., as provided for under Sections 113 and 117, also Schedule III, parts 2 and 4.

The term "owner" is defined in Section 5 (29), but under Section 175 this definition in regard to payment of expenses by owners includes the adjoining and building owners, the owner immediately entitled in possession to the premises or the occupier thereof, who shall be liable to pay any sum not exceeding in amount the rent due now or until the end of the tenancy, and if there are successive owners, each of them shall be liable to contribute to the expenses in proportion to his interest. If some of the owners liable to contribute cannot be found, the deficiency arising must be divided amongst the owners that can be found, and in event of default, one of several co-owners cannot refuse to pay on the ground that the others had not been summoned. Sub-section 2.—When the owner cannot be found, provision is made in Sections 188 and 196 for dealing with same and the time-limit for recovery of any surplus under the latter part of Sub-section 2 is six months from the date of refusal by the owner to comply with the demand.

Sections 110 to 117 inclusive.—These sections give power to the Council to sell the structure or pull down and sell the materials in payment of the expenses incurred in relation to dangerous structures, and if the proceeds of such sale are insufficient to pay these expenses then the Council have power to prevent the erection of any structure upon any part of the land until such expenses are paid, or to recover such expenses together with all costs in a summary manner. Power is also given to remove any persons from a dangerous structure with the consent of a Petty Sessional Court.

PART X.

Dangerous and Noxious Businesses.

Sections 118 to 121 inclusive.—These sections provide that any dangerous or noxious business shall not be built nearer than 50 ft. to any building or within 40 ft. of a public highway.

PART XI.

Dwelling-houses on Low-lying Land.

Section 122.—It shall not be lawful for any person upon land of which the surface is below the level of Trinity high-water mark and which is so situate as not to admit of being drained by gravitation into an existing sewer of the Council to erect any building to be used wholly or in part as a dwelling-house or to adapt any building to be used wholly or in part as a dwelling-house except with the permission of the Council, etc.

Note.—The Trinity high-water mark is 12 ft. 6 in. above the ordnance datum.

Note.—It has been held that drainage by gravitation into the sewer is at ordinary times and the Council cannot enforce such drainage at special times when surcharging of the sewer by storm-water prevents the drainage passing into the sewer. (Ellis *v.* L.C.C. (1904), 90 L.T. 206.)

Under the L.C.C. regulations dealing with dwelling-houses on low-lying land, you must not place the underside of the lowest floor of any permitted building at such a level as will render it liable to flooding, and the building must be properly and efficiently drained to the satisfaction of the engineer to the Council either into a local sewer or into a main sewer of the Council. It should be noted that all the sewers in the County of London do not belong to the Council, and where the sewer belongs to the local authority special regulations are sometimes in force regarding same.

When it is proposed to build upon ground which is below Trinity high-water mark and which cannot be drained by gravitation into an existing Council sewer, written application must be made to the Clerk of the Council for a licence. The application must state the nature and extent of the interest of the applicant in the buildings to be erected or adapted, together with plan and section of the lowest floor of such building and the curtileges thereof, also the position and course of the drainage system proposed, with level of lowest floor figured above or below ordnance datum as the case may be. Such plans and sections to be drawn to a scale of 8 ft. to 1 in. A block plan to a scale of not less than 1/2500 is also required showing the position of building or buildings, the local sewer into which it is proposed to drain same, and the connection of such local sewer with an existing Council sewer.

The Chief Engineer reports to the Council for or against the application, but if the licence is refused and the applicant objects to such refusal, or to any condition or regulation made by the Council in granting a licence or to any decision of the said Engineer, he may appeal to the Tribunal of Appeal.

QUANTITY SURVEYS IN THE U.S.A.

Mr. Oscar Euphrat, of Messrs. Euphrat & Hanly, structural engineers, Cincinnati, Ohio, in a recent address on this subject, delivered at the Second Annual Convention of the American Institute of Quantity Surveyors at Washington, D.C., said that the ultimate establishment of some general quantity system seemed to him to be one of the main objectives of the American Institute of Quantity Surveyors. That it would come about was only a question of time, because it was a scientific and fair way of doing business between the contractor and the owner. Of all parties concerned in the general quantity system, the owner was the one most vitally interested and also the one who knew least about it. The owner was the most interested party because he paid for the waste the present method entailed. When the owner undertook a construction project, the general contractor bought a copy, or several copies, of plans and specifications, and, in turn, asked a usual minimum of sub-contractors to quote a price for some particular specialised branch of construction. The sub-contractor then bought some more copies of plans and specifications. The next step was the preparation of quantity surveys by the general contractor and sub-contractor as a necessary preliminary to making quotations.

The general contractor's quantity survey consisted of those specialised branches of the construction which he himself executed together with a more or less approximate survey of some of the branches which he did not execute, but which he expected to buy from the sub-contractor specialist. The extent to which the general contractor did this latter depended largely on the location of his business and customs of the industry in that locality. The sub-contractor's quantity survey embraced only that branch of work in which he specialised. In due time the owner received a bid or quotation from each of the general contractors. Let him pause here for a moment and reflect on the money and time expended on his project up to this point. Money and time expended not in a reasonable or logical manner, but money and time spent in a vast duplication of effort, because there would have been made quantity surveys of general contract branches by all general contractors asked to quote prices by the owner, together with quantity surveys by all sub-contractors who had been asked to quote by all general contractors collectively.

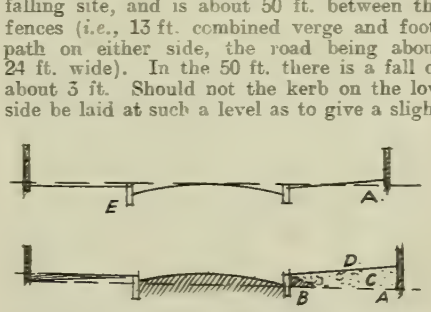
It was conservatively estimated that the cost of the quantity surveys thus made was 2½ to 3 per cent. of the cost of the project under consideration, and of this, 2 to 2½ per cent. was due to duplication and was absolute waste, and for which the owner paid the bill. Now it was difficult, if not impossible, to make the owner understand or even believe this, because he was not at this point of the operation, nor at any other time, asked to write a cheque for this tremendous cost, and he said: "I don't pay, it's the contractor who pays, and judging from the way he solicited an opportunity to quote a price, he must be glad to pay, and evidently has no worries at all about it." The owner was entirely wrong in the first premise, because he did pay; and entirely right in the second premise, because the contractor knew that he (the contractor) did not pay and that the owner did. If the owner would for the moment revert to his own business, he would admit at once that in the preparation or manufacture of the goods he sold, he had a certain indirect or overhead expense which was not paid for by the buyer as such, or by cheque directly, but was nevertheless surely and inevitably paid for by the buyer; because it was included in the selling price. Just as surely and as inevitably does the owner pay the cost for the duplication and waste caused by so many quantity surveys, as that cost, which was an indirect or overhead expense in the contractor's business

certainly included in the general con-tor's and sub-contractor's selling price. There was one kind of owner who did not even one quantity survey, although he ht have been responsible for scores of m. This was the owner who, after he eived quotations, concluded that the pro- would cost more than he wished to spend, found himself unable to finance the opera-n, or just simply changed his mind and ew the whole thing over. He did not pay ent, but the other owner who did proceed h his project paid not only for the waste ch had occurred because of his own pro-, but also had saddled upon him the cost the quantity surveys occasioned by that er owner who abandoned his project. This eminently unfair, and this cost was no onsiderable part of the whole. He believed t the owner would now admit that he paid, that he would be bewildered and perhaps nbounded to realise that from 2 to 2½ per t. of the price he paid for a construction ject was positive waste, which could be ided by a general quantity survey sys-n. He could engage a competent quantity veyor to prepare one quantity survey of h branch of work for the use of all bidders ted to submit proposals, but that would eliminate the waste caused by other ers who might not be willing to do this, he (the particular owner), therefore, ld still have to pay his proportion of that ste, as well as the total cost of one survey. this they thought the owner was right, as y did not think it would be fair to increase burden of one owner as against another, n though in the long run all owners would benefited; nor would it be likely that ers to any considerable number could be uced to follow this course. Besides this, would be impracticable, if not impossible, introduce a general quantity survey sys-n until such a time as the system was re thoroughly understood, and there were ablished a sufficient number of quantity veyors of unquestioned ability and integrity fulfil the requirements and satisfy the eds of the entire construction industry.

They believed that the easiest and most ical way to bring about the general quan-y survey system was through and with the ntractor. Next to the owner the contractor s the most vitally interested party, because would eliminate that serious, unfair element competition in his business which no owner, less he be a contractor, had in his business; at was, the competition in quantity. Under general quantity survey system the con-ctor would meet his competitor on the ne basis that the owner met his, that was, the basis of quality and price. The owner uld furnish a bill of goods, and the con-ctor would quote a price on that bill. If the completion of the project it be found t the contractor had been required to fur-n more goods than contemplated in the inal bill, he would be compensated for ds under a supplementary bill, and con-sely, he would give credit for a supple-tary bill of goods not furnished. That ld put the contractor and owner in the tion of buyer and seller precisely on the e fair and equitable basis that the owner was with anybody except the contractor, the contractor was with anybody except owner.

would seem, then, that the contractor d lend his assistance and support to the duction of a general quantity survey m. Some of his (the speaker's) hearers t not agree with him when he said that ontractor was doing this. It was true, ost cases, that the contractors' Trade iation did not advocate—in fact, fre-ly opposed—the general survey system, ather advocated and urged strongly the lishment of what might be called an iation quantity system. Under this sys-he survey was made and paid for by Association and furnished to members If such a system were to come into al or universal use, while a step in the direction, it would still leave much to be desired, not only from the contractor's point of view, but also from the owner's. The contractor would still have competition in quantity, not, of course, with his fellow-Association member, but with his competitor outside the Association, and there would always be, as there always had been, competitors outside the Association. The owner would still pay, although in somewhat lesser degree, for duplication of quantity surveys and resultant waste, and that other owner who abandoned his project would still escape scot-free.

The general quantity survey system would surely become an established fact, not this year or next year, but at some time in the near future. It would come about, not by any chance or miracle, but through a natural process of education, following, as all things did, the lines of least resistance; hastened, however, by intelligent guidance which they believed could and should be provided by the American Institute of Quantity Surveyors as an organisation, and through the individual member by maintaining and sponsoring only ideals of the loftiest ethical standards in all his relations, which alone would secure for him the esteem and confidence of the owner, the contractor and the architect.



ARCHITECTS' & BUILDERS' INQUIRY BUREAU

We are glad to give questions and answers, but cannot accept responsibility for contributed replies, especially on legal matters.

May we appeal to our correspondents to submit their queries on paper of a size easily filed, and written as legibly as possible, or, better still, in typewriting?—Ed.

Road Construction.

Sir,—I am interested in the development of an estate, where the roads have been roughly made, wood railings put up, and the local authority has sewered and is kerbing. The main road runs at right angle across a falling site, and is about 50 ft. between the fences (*i.e.*, 13 ft. combined verge and footpath on either side, the road being about 24 ft. wide). In the 50 ft. there is a fall of about 3 ft. Should not the kerb on the low side be laid at such a level as to give a slight

A is the level of the existing land and footpath on the low side.
B is the kerb newly laid, backed up by clay from sewer trenches.
C is the filling that will be necessary.
D shows the footpath (if made) that will come halfway up the fence giving a drop of 2 ft. or more to the field building site level.
E. Had this kerb been laid at level A all this filling would have been unnecessary, and the building site would not have been 2 ft. lower than the footpath D.
The dotted lines show the approximate cross section of the levels.

fall in the existing footpath thereto, and the kerb on the other side laid at the same level? If the kerb on the other side is laid on the ground level there, and the kerb on the low side were heightened to that level, it brings the footpath and verge on the low side (they would have to be made up to about 2 ft. or more above the ground level there, half-way up the fence, or, in effect, the building sites there become 2 ft. or more below the road level). If any of your readers interested in the lay-out of estates or construction of roads could advise me, I should be extremely grateful.

Drysite.

Roof Insulation.

[Reply to "Inquirer," August 12.]

Sir,—If the undersides of the rafters are covered with ¼-in. dovetailed sheeting, 30-gauge and roughly plastered, a cheap and more satisfactory insulation will be obtained than by using boarding or boarding and felt, as the layer of air between the underside the roof covering and the surface of the dovetail sheeting (equal to the depth of the rafters) is a better non-conductor than a layer of boarding and felt. H. V. M. E.

Overhanging Barge Board: Question of Infringement.

Sir,—A new house has been built adjoining my house. The builder claims the right to put a barge board overhanging my roof. Assuming he has such a right, can my house now be identified? Where should a division line be shown? Ajax.

Sir,—Presumably no use was made of the inquirer's end wall next the new building, but the adjoining owner built up a wall independently, and on his own land, abutting on the end wall referred to. If this is so, then the division of the two properties is immediately between the two end walls so abutting; and the owner of the new building is not, in this instance, entitled to overhang the inquirer's roof by a barge board or otherwise. The latter can abate this nuisance himself, but inasmuch as he has no right to trespass, even to redress a grievance, he should, preferably, apply to the Court for an injunction to compel the adjoining owner to abate the nuisance, or bring an action for the money value of the damage caused by the interference, unless other terms can previously be negotiated. If this overhanging is allowed to remain, the common law right of the inquirer is infringed, and a prescriptive right may eventually be acquired to the overhanging barge board remaining, which would restrict the right of the inquirer to raise his building at any time he wishes to do so.

On the other hand, if the adjoining owner has made use of a party-wall, in rebuilding, then the division is half-way between the said wall, and the adjoining owner can, in this instance, overhang his barge board to the extent of half the said wall—but no more. And the inquirer (should he eventually desire to raise his building) has the use of the party-wall in like manner. Law.

Dampcourse.

[Reply to "Architect," August 19.]

Sir,—There is a satisfactory alternative to the "costly process of cutting and inserting a dampcourse in old damp walls." It is inserting 1½-in. small agricultural pipes 3 ft. 6 in. apart for one course, and the second course the same distance apart but central between the first course and 12 in. higher. Cut the hole as near the size required as possible, insert the tube to within 3 in. of inside of wall, give tube ½ in. fall outwards, and project about ¼ in.

Some years ago there was a firm who made a speciality of these tubes, but whose name I have forgotten. I have used them and had satisfactory results. They set up a circulation of air, drawing the moisture to the tube by capillary attraction, and evaporation completes the process. Circulation.

Building Estates.

[Reply to "Houseowner," August 19.]

Sir,—The statutory duties and powers of a surveyor to a local authority in respect to the apportionment of expenses under section 150 of the Public Health Act, 1875, or (where applicable) under the Private Street Works Act, 1892, of streets taken over by the local authority, are not available to the ordinary estate surveyor; and any apportionment the latter has made in respect to private streets laid out on an estate cannot be enforced under any statutes. Therefore, his ruling as to the apportionment, obviously, cannot have the "same weight" as that of the surveyor to the local authority. Nevertheless, the ruling of the surveyor to the estate as to apportionment of expenses, if reasonable, and complying with the agreements or covenants of the lease or conveyance, will be upheld in the Court; and if it is unreasonable the inquirer likewise has a remedy in the Court unless he can previously come to terms. Such matters, being of a highly technical character, are best decided by the parties agreeing to put their differences to arbitration. Law.

THE BUILDING TRADE

BOUNDARIES, FENCES AND TREES—IV.

OWNERSHIP OF TREES (Continued).

In our last article we were considering the question as to the right to lop branches of trees overhanging a neighbouring property, and we had shown that in Lemmon *v.* Webb (1895, A.C.1), the House of Lords, affirming the Court of Appeal, held that the owner of land over which the branches extends has a right to lop the branches without notice provided he can do so without trespassing on his neighbour's land. It was also held that no easement can be acquired in respect of the overhanging branches of trees. The reason why an easement cannot be acquired is given in the judgments delivered in the House of Lords and in the Court of Appeal, and Lord Justice Lindley put the matter thus: "Considering that no title is acquired to the space occupied by new wood, and that new wood not only lengthens but thickens old wood, and that new wood gradually formed over old wood cannot practically be removed as it grows, and considering the flexibility of branches and their constant motion, it is plain that the analogy sought to be established between an artificial building or projection hanging over a man's land and a branch of a tree is not sufficiently close to serve any useful purpose." The same reasoning applies in the case of the roots of trees, and even if possible more so, as there the element of secrecy comes in. The following statement from Gale on Easements, Sixth Edition, was approved in the Court of Appeal: "There appears to be no authority in the English law that in the absence of express stipulation an easement can be acquired by user to compel a man to submit to the penetration of his land by roots of a tree planted on his neighbour's soil. The principal objections to the acquisition of such an easement consist in the secrecy of the mode of enjoyment, and the perpetual change in the quantity of inconvenience imposed by it." This latter objection is that explained by Lord Justice Lindley.

The following statement by Lord Justice Kay in Lemmon *v.* Webb may be cited here, as it has a bearing upon some of the cases we shall deal with hereafter: "The result of the authorities appears to be this: The encroachment of the boughs and roots over and within the land of the adjoining owner is not a trespass or occupation of that land which by lapse of time could become a right. It is a nuisance. For any damage occasioned by this an action on the case would lie."

We may here refer to the recent case Simpson *v.* Webb (133 L.T. 46, *The Builder*, February 20, 1925) in case it should be taken to infringe any of the principles we have explained above. There two houses adjoining each other were owned by the same owner until 1918, when the plaintiff in this action acquired one of them. From 1912 a virginia creeper had been growing in the garden of the house not acquired by the plaintiff which ran over the house which he had purchased but did not overhang his property but merely clung to the wall of the house. In 1923 the defendant had purchased the other house, and this action was brought against him for trespass in respect of the creeper which it was alleged had choked a gutter on the house. The County Court judge had found in favour of the plaintiff and had awarded £2 damages in respect of the choking of the gutter and some question as to a gate-post having been attached to the house. The case went to a Divisional Court, and the Court held that there was an implied reservation in the grant of the house to the plaintiff that the gate-post and creeper should remain as they were but not to the extent that the creeper should be allowed to choke the gutter, and in this respect the award of damages should stand.

It will be seen that this case has really no bearing upon the principles we have stated as applying to trees, as it was not an easement acquired by prescription but by an implied grant, and therefore did not fall within the passage from Gale on Easements quoted above, "that in the absence of express stipulation an easement cannot be acquired by user," and, moreover, as the Court held in this case, the easement was obvious and therefore the other element of secrecy was absent.

An old decision which also turned upon a virginia creeper, Pickering *v.* Rudd (1 Stark 56), but where the adjoining houses simply belonged to adjoining owners and no question arose as to the original grant made by one owner as to both houses, followed the principles we have mentioned as applying to trees. In that case the creeper which grew in the plaintiff's garden had spread itself over the defendant's house. The defendant, without touching the surface of the plaintiff's premises, had reached the creeper by means of a scaffolding suspended over the plaintiff's garden by ropes and had cut away the portions of the creeper which clung to his house. It was admitted on the record that the creeper was mischievous to some extent, and the jury in these circumstances was directed that the issue was whether the defendant, in removing the mischief from his house, had done any damage to the tree which might have been avoided, and the jury returned a verdict for the defendant and the King's Bench refused to grant a new trial.

We have now considered the ownership of trees near boundaries and the rights of neighbouring owners to lop branches or to cut roots, but there is a further question to be referred to: the ownership of fruit or timber taken or cut from overhanging branches.

Fruit and Timber on Overhanging Branches.

In a recent case Mills *v.* Brooker (1919, 1 K.B. 247, *The Builder*, September 26, 1919), the plaintiff was the owner of ten apple trees which grew close to his boundary, the branches of which overhung the defendant's land. The defendant picked apples from the overhanging branches amounting to some bushels and sold them. The plaintiff sued him for the conversion of the apples, and a Divisional Court, affirming the decision of the County Court judge, held that the fruit belonged to the owner of the trees, and the fact that the fruit had been severed from the overhanging branches did not cause him to lose the property in the fruit. As the defendant had actually appropriated the fruit to his own use, it was held that he was liable for conversion, but the Court expressed no opinion what the plaintiff's remedy would have been had the defendant merely severed the fruit without appropriating it.

As we have shown, an adjoining owner has the right to lop overhanging branches if he does not enter upon his neighbour's land to do so (Lemmon *v.* Webb, 1894, 3 Ch. 1; 1895, A.C.1) so long as he does not do unnecessary damage to the tree (Pickering *v.* Rudd, 1 Stark 56), but the case Mills *v.* Brooker raises the question as to whether, if there is any value in the timber so severed, it can be retained by the person who has lopped the trees or how it can be claimed by the owner of the tree. The doubt expressed by the Court as to what remedy would have been open to the plaintiff had the defendant merely severed the fruit apparently arose from the affinity of the right to lop the branches, but on the other hand conversion would appear to apply as much to timber as to fruit.

In the very old case Masters *v.* Pollie, to which we referred in our third article, the dispute between the parties appears to have arisen in connection with this question. There was a large tree on the boundary of the plaintiff's property, the roots of which extended into the defendant's land. The plaintiff had cut down the tree and sawed into boards. The defendant went upon plaintiff's land and took away some of boards, claiming he was justified in so do by reason of the fact that the tree had b in part nourished by the defendant's s but in an action for trespass this plea was allowed.

There is a note in Viner's Abridgm which was cited by Lord Justice Kay Lemmon *v.* Webb that "If a tree grows a hedge and the fruit falls upon anothe ground the owner of the tree may go in take it," but this statement of the law very old and appears to require some qualifi tion, for it was held in another case, Anth *v.* Haney (1829, 8 Bing 186) that a plea an action for trespass that certain goods the defendant were on the plaintiff's la and the defendant only entered the land remove them was bad, a decision agree with that in Masters *v.* Pollie, a case wh was decided in 1620, but if a person ta the goods of another and places them on own land it is said in Patrick *v.* Colen (1838, 3 M. & W. 483) the owner may en the land for the purpose of retaking them.

As the parties in the case of trees boundaries may be tenants in common, as have shown above, it is obvious that n questions as to ownership may arise in c nection with the timber, but in the case are considering where the ownership of t tree is not in question but only the timber fruit upon overhanging branches, the safe course would appear to be for the pers claiming the timber or fruit not to enter t adjoining owner's land without applying f leave to come and remove the timber or fru and if such leave is refused then to make demand for the fruit or timber, for a dema and refusal is evidence (though not proof) conversion. Hollins *v.* Fowler (L.R. 7 H. 757).

Even if it should prove that the adjoini owner was a tenant in common of the t in question, the course we recommend wou tend to elicit this fact in a peaceful mann and avoid the risks of an action for trespa being brought. So far we have been consid ing the ownership of trees in boundaries, b ownership carries with it liabilities, and our next article we shall consider the liab ties attaching to the ownership of trees boundaries and near highways.

PURCHASERS OF PROPERT AND TOWN PLANNING

We desire to draw immediate attent to a recent decision *In re* Forsey a Hollebone's Contract (*Weekly Notes*, June 1 as it raised an important point purchasers of property. By a contra dated December 10, 1926, the purcha had agreed to purchase certain freeh premises in Eastbourne as an estate fee simple, free from incumbrances except thereinafter mentioned, at a price of £3,2 Clause 5 of the contract provided that property was sold subject to the restric covenants contained or referred to in a veyance dated September 28, 1925.

The deposit money was paid by the chaser on the same day that the cont was entered into. On December 30, the chaser's solicitors applied to the Town C for an official search of the register of l land charges, and received a certificate sh ing that the property was subject to a r lution passed by the county borough of E bourne, dated October 26, 1925, under Town-Planning Act, 1925. Neither the ve nor the purchaser were aware of this res tion at the date of the contract.

The purchaser took out a summons u section 49 of the Law of Property Act, 1 asking for a declaration that the vendor not shown a good title to the property

s resolution, registered as a land charge, stituted an incumbrance within clause 1 the contract, and he claimed repayment of deposit money and the costs of investiing the title.

The Court said that, under the contract, it s clear that the expression "incumbrance" "incumbrances" must be read as extendto restrictive or other covenants affecting land, and under section 15, subsection (7), the Land Charges Act, 1925, any resolun passed by a local authority to prepare adopt a town-planning scheme was to be med to be a restrictive covenant: Section of the Land Charges Act had, however, n repealed by the Law of Property mendment) Act, 1926, and a new subsecn substituted for it, which omits the detion of such a resolution being deemed be a restrictive covenant and makes the ie to be simply registered as a land charge. us the Court held that the matter now s at large, and the Town-Planning Act, 5. must alone be looked to for a solution the question, and under section 2, subtion (2), of that Act, a town-planning eme prepared or adopted shall not have ct unless and until it is approved by order the Minister, and such approval may be hheld. Thus the Court held that at sent there was only a potential interference h the enjoyment of the property, and until t had ripened into an actual interference was impossible to say an incumbrance was posed upon the land by the mere passing the resolution.

t was, however, further held that even this were an incumbrance, it was an inmbrance of which the purchaser had notice der section 198 of the Law of Property t, 1925, of such a nature as to preclude n from repudiating the purchase.

That section provides: "The registration any instrument or matter under the prosions of the Land Charges Act, or any actment which replaces it, in any register pt at the land registry or elsewhere, shall deemed to constitute actual notice of such strument or matter, and of the fact of such gistration to all persons and for all purses connected with the land affected. . . ."

this case, no scheme under the Townnning Act had been prepared, and the ms of the resolution were not given in Report. The so-called simplification of the w of Property at present has considerably nplicated the law with a number of new tutes, which, as will be seen above, are stantly being altered and which, although ng a bulky volume, have all to be read e or less together.

What is the lesson to be learned from this ? At the time that a contract of purse is being entered into, searches, of se, are not instituted, but words are ined in the contract which are intended to t every eventuality. In the present case word "incumbrance," owing to one of lightning changes in the law between the ing of the Land Charges Act and the of Property Act in 1925 and its ndment in 1926, failed to embrace a regisl land charge, and in future purchasers t be careful in their contracts to guard nst such charges specifically, or else inte a search of the register before entering the preliminary contract.

NEW BUILDINGS IN LONDON

Baron's Court.—Nursing Home.—On a e in Gledstanes-road, Baron's Court, ng on to Queen's Club Grounds, it is osed to erect a nursing home for Miss . Purdy, 14, Comeragh-road, W.14. s have been prepared by Mr. H. Paul, .B.A., 23, Queen Anne's-gate, S.W.1.

Bermondsey. — Extensions. — Messrs. G. roy & Co. have prepared the quantities xtensions to the Central Library build- Spa-road, Bermondsey. Tenders are now being invited and the work is for the Borough Council.

Croydon.—School.—The governors of the Whitgift Foundation have decided to build a new grammar school at Haling Park, Croydon, to accommodate 700 boys. No architect has yet been appointed for the scheme.

Dagenham.—Premises.—The Co-operative Society has acquired a site, at a cost of £3,000, adjoining the present premises, for store extensions, which, when completed, will give a frontage of 179 ft.

Enfield.—Houses.—Sir W. Prescott & Sons, Ltd., have secured the contract for the erection of 244 houses on the Albany-park site, Enfield, for the Urban District Council. The amount of the accepted tender is £93,629.

Hanwell.—Housing Scheme.—Operations are shortly to be commenced on the erection of over 100 houses on the Seward Estate, Hanwell. The architects are Messrs. Tyler & Tyler, 51, The Mall, Ealing, and the contractors are Messrs. Walters & Blake, Ltd., Kingston-road, Ealing.

Ilford.—Church.—The foundation stones for a new United Methodist Church, to be erected at the corner of Eastern-avenue and The Drive, have been laid. The architects are Messrs. George Baines and Son, F.F.R.I.B.A., A.I.Struct.E., 121, Victoria-street, Westminster, S.W.1. The contract amount is £15,767, and Mr. A. E. Symes, of Stratford, E., is the contractor.

Kentish Town.—School Rebuilding.—Lady Margaret-road Wesleyan Sunday School, Kentish Town, is being rebuilt at a cost of £5,500. Rev. Frederic Ellis, 4, Lady Margaret-road, Kentish Town, is in charge of the scheme.

Kenton.—School.—The Middlesex Education Committee are proposing to erect an elementary school for about 350 children at Kenton, near Wembley.

Piccadilly.—Theatre.—A scheme is afoot for the erection of a new theatre, on a site near Piccadilly-circus. The theatre will cost about £200,000 to £230,000 to build. There will be seating capacity for about 1,750 people. Mr. Laddie Cliff, the comedian, is mentioned in connection with the scheme. No architect has yet been appointed, but we understand that the contract is likely to be secured by a well-known London firm of builders.

Reigate.—Houses.—On a site in Smokelane, Reigate, the Town Council are inviting tenders for the erection of 26 houses. The plans have been prepared by the Borough Surveyor, Mr. F. T. Clayton.

Strand. — Structural Alterations. — Extensive alterations and internal additions, as well as the building of two new floors, are being carried out to the old *Morning Post* building at Wellington-street, in the Strand. Messrs. George & T. S. Vickery, of 50, Gresham-street, E.C.2, are the architects, and Messrs. Trollope & Colls the contractors.

Strand.—Improvements.—Work has been started on the block of buildings between Adam-street and Cecil-chambers. Nos. 73, 74 and 75, Strand, and Nos. 11 and 12, Adam-street, are to be pulled down. The road, when the work is completed, will be on a level with the Tivoli and Cecil-chambers. We understand that the new premises to be erected on this site are for Messrs. H. Appenrodt, Ltd. No architect has yet been appointed.

Twickenham.—Enlargement.—The English Rugby International Committee are considering a scheme for the enlargement of the ground. The east stand is to be made into a double-decker, and the terrace at the south entrance is to be extended back to provide accommodation for another 10,000 people.

Wembley.—Cottages.—The Wembley Urban District Council are to erect 76 cottages on a site at Christchurch estate, near Ealing-road.

BY-LAWS AND NEW BUILDINGS

The case of which we published a brief report in our issue of July 1 [Attorney-General (at the relation of the Uxbridge Urban District Council) against James Ellis and Others] is a little difficult to follow as reported.

It appears that there was a building consisting of a stable and harness-room with other rooms above, and that in July, 1922, the appellant had converted this building into two separate dwelling-houses without depositing plans as required by the by-laws in force, and on proceedings being taken the only defence raised was that the building, being an ancient Tudor building erected some 400 years ago, was not subject to the by-laws and did not come within any statutory definition which would make it a "new building," or the operation "the erection of a new building." The "Others" made parties to the proceedings appear to have been tenants who had taken the premises after conversion. The Court below had held that the operation amounted to the erection of a "new building" within the by-laws in force, and made the declaration applied for as against the appellant, but made no order as against his tenants. The Court of Appeal affirmed this judgment without calling upon counsel for the respondents.

The only difficulty in the case is to see on what possible conception of the law the above defence can have been raised. No particulars are given in the report as to the actual nature of the operations carried out, or whether any portion of the building before conversion was being used for the purposes of a dwelling-house, but this much appears clear, that the building, by the operations carried out, had been converted into two dwelling-houses, and it was not thus a case where any question arose as to whether an alteration or addition made the building a "new building," as, for example, in the case of The Governors of Repton School *v.* Repton Rural District Council (1918, 2 K.B. 133; *The Builder*, May 17, 1918).

The Statutes seem to be quite clear that operations which will convert either a building not originally constructed for human habitation into a dwelling-house, or even a building originally constructed as a dwelling-house, into more than one dwelling-house shall be considered the erection of a "new building" and thus become subject to the by-laws.

Thus, section 159 of the Public Health Act, 1875, lays it down that "the conversion into a dwelling-house of any building not originally constructed for human habitation, or the conversion into more than one dwelling-house of a building originally constructed as one dwelling house only, shall be considered the erection of a new building. This section was amplified but not repealed in section 23 of the Public Health Acts (Amendment) Act, 1907, a section which occurs in Part II., a Part of the Act which is applied by the Ministry of Health on the application of the local authority. It repeats in paragraph (*b*) the passage quoted above, and in paragraph (*c*) contains a further provision, "the reconversion into a dwelling-house of any building which has been discontinued as, or appropriated for any purpose other than that of a dwelling-house," shall be deemed to be the erection of a new building. We are only dealing with the case on the point of conversion, so it is unnecessary to refer to the paragraphs in the sections relating to reconstruction and to additions to existing buildings.

The age of the house is clearly immaterial under the sections, but as these sections are based on sanitary reasons, it is apparent that the age of the house, far from being a ground for exemption, rather calls for vigilance in the enforcement of the law.

Builder's Estate.

Mr. James Wilson Langdon, of Mount Hawke, St. Agnes, Cornwall, retired builder, left £23,037.

FELLOWSHIP IN THE BUILDING INDUSTRY

Some 120 workmen employed on the building of a factory at Fazakerley, Liverpool, were entertained on the 17th inst. to dinner at the City Buildings, Old Hall-street, Liverpool, by the architect, Mr. Max Clarke, F.R.I.B.A. The proceedings were of an informal character, and were very much enjoyed.

Mr. Max Clarke explained that he did not believe in an architect keeping aloof from the employees. He wanted the men to realise that he appreciated the good workman who did his best for the work he was engaged upon. He himself was an employee, and he would talk to any man from whom he thought he could get help or information. He gave his views on the best way to do slating work and building brickwork, especially that built with fire bricks in fireclay and work in other trades, and emphasised the necessity for care in every department, as only in this way could good results be attained and trouble avoided in the future. He described the great stones in the Temple of Baalbec, and called attention to what the people in old times could do, although they had not the modern appliances now in everyday use in the building trades. His object in meeting the men, he explained, was to impress upon one and all that only by every man doing his best in his particular line could satisfactory results be attained which would be a credit both to the architect and those who were employed to carry out his ideas.

The architect was supported by some of the directors of the company, and he also had as his guests Messrs. Chappell, the general contractors for the work; Mr. Arnold Statham, one of the directors of Messrs. Banister, Walton & Co., of Manchester, the contractors for the steelwork; Mr. Cooper, representing the Penmaenmawr and Trinidad Lake Asphalt Company, the contractors for the asphalt work; Mr. Hunt, the sub-contractor for the plumbing, glazing, and painting work, and others.

Causes of Dampness in Houses.

Members of the Royal Institute of British Architects are, it is reported, engaged just now on an inquiry, covering both England and Scotland, into the couses of dampness in houses, which, according to a recent report of the British Medical Association, is responsible in large measure for rheumatic heart affections in children. The investigation has been proceeding for some months, and a special subcommittee of the Science Standing Committee of the Institute is about to study the returns that have been collected and draw conclusions thereupon.

TRADE NEWS

A Sanitary Ware Catalogue.

We have received from Messrs. Rownson, Drew & Clydesdale, Ltd., 225, Upper Thames-street, E.C. 4, their new catalogue—subject to a trade discount of 20 per cent.—of sanitary ware and accessories. One of the many appointments shown is the "Veronic" front-panelled square bath, which has certain advantages over the ordinary rolled-edge bath and can be supplied at a price which allows of its installation in even the cheaper class houses. The catalogue, which is fully illustrated, will be sent gladly upon application.

Fireplaces in Stoneware.

An attractive catalogue in colour has been issued by the Well Fire and Foundry Co., Ltd., 15, Berners-street, W.1, descriptive of their fireplaces of salt-glazed and fusion stoneware. Some attractive styles in a wide and varied range of colours are shown, and early application should be made for the catalogue, which is sent free.

Woodworking Machinery.

Messrs. J. Sagar & Co., Ltd., of Canal Works, Halifax, have issued a new leaflet descriptive of their new double-spindle recessing machine for stair strings (A.C.J.). This machine has a number of points embodied in its construction which make for ease and the production of good work, full details of which are contained in the leaflet sent upon request.

Radiator Travelling Exhibit.

The National Radiator Co., Ltd., have arranged for a demonstration of their travelling exhibit fitted with a working installation of the Ideal Cookanheat and Ideal Classic radiators, as follows :—August 30 to September 5, Cathedral Garage, Rathbone-place, Liverpool.

Ready-Mixed Paints.

Messrs. Wm. Harland & Son have lately issued new cards showing the Standard shades of their "Harlaqua" washable distemper, a new product lately brought out. At the same time, a shade-card is issued for their ready-mixed paints. These cards will be sent upon application to the makers, at Merton, S.W.19.

The Timber Trade.

We have received from Mr. Thomas J. Stobart, 316, Ivydale-road, S.E.15, two catalogues in which are detailed books for the timber, plywood, pulp, and paper trades, as well as details of girthing tapers and strips, rules, etc., for use in the timber trade. These catalogues will gladly be sent upon request.

"The Roadmaker."

The August issue of this little periodical—which is issued by the B.R.C. Engineering Co., Ltd., of Stafford—is an interesting one. Mr. T. B. Cooper contributes an excellent article on the old town of Winchester, illustrated by some good photographs. We give the following excerpt :—"Winchester is essentially a city with an atmosphere. Anyone with the least imagination walking round the Cathedral precincts on a quiet summer evening must feel the exceptional influence of the perfect architecture, mainly Tudor, toned with years of weather. The use of flints alternating with red bricks is the characteristic of many of the old buildings, and these flints, often used as panels, constitute a welcome change from the brickwork, and the two blend harmoniously. One almost expects, in such surroundings, to meet Sir Walter Raleigh round the next corner. It is the atmosphere of the ruffle, the lace-trimmed cuff, the silver-topped long cane, in short, of the Tudor gallant." The issue will be sent free upon application to the Company.

Hot-water Pipes.

Messrs. Jones & Attwood, Ltd., of Stourbridge, advise that they have issued a new terms sheet, increasing by 2½ per cent. their discounts off all hot-water and smoke pipes and connections, and small cast-iron boilers.

PROPOSED NEW BUILDINGS & OTHER WORKS*

In these lists care is taken to ensure the accuracy of the information given but it may occasionally happen that, owing to building owners taking the responsibility of commencing work before plans are finally approved by the local authorities, "proposed" works at the time of publication have been actually commenced. Abbreviations: T.C. for Town Council; U.D.C. for Urban District Council; R.D.C. for Rural District Council; E.C. for Education Committee; B.G. for Board of Guardians; B.C. for Borough Council; P.C. for Parish Council; M.H. for Ministry of Health; M.T. for Ministry of Transport; C.B. for County-Borough; B.E. for Board of Education; M.A.B. for Metropolitan Asylums Board; and M.W.B. for Metropolitan Water Board.

Following is a list of abbreviations:—Borough Surveyor, B.S.; Borough Engineer, B.E.; District Surveyor, D.S.; Clerk, C.; Town Clerk, T.C.; County Engineer, C.E.; County Surveyor, C.S; County Architect, C.A.; Surveyor, S.; Engineer, E.; Borough Architect, B.A.; Architect, A.

Aberystwyth.—Rev. D. Jones, of Llambadarfawr, is proposing to erect Church Hall.

Accrington.—T.C. Jubilee Celebration Committee have a scheme in hand for extensions to Town Hall.—Labour Party have acquired the property known as Parkside House, Blackburn-rd., for conversion into new headquarters.

THE BEAK STREET COLLAPSE

At the resumed inquest at Westminster last week on the man and woman who were killed in the collapse of an old house in Beak-street, Regent-street, last month during reconstruction, after evidence had been given, Mr. Ernest George Beck, principal assistant in the Architect's Department of the L.C.C. read a report that he had made on the collapse. He said that as the result of his inspections he had come to the conclusion that the collapse was caused by the fall of the party-wall between Nos. 53 and 55, Beak-street. That fall followed and was accelerated by the yielding of the gravel beneath it. The yielding of the gravel was due to a culmination of five contributory influences to which the gravel had been subjected during the building alterations which were in progress. These influences were :—

1. Excavation throughout the basement of No. 55 down to the base of the party-wall, thus leaving the gravel beneath the wall free from the restraint against sideway yielding formerly provided.

2. Eccentricity of the loading on the party wall.

3. Exposure of the gravel to the weather as the result of the excavation, to the tramping of feet, and the vibration of street traffic.

4. Concentration of extra load on the parts already most severely loaded.

5. Omission of adequate support and means of strutting and shoring.

Questioned by Mr. J. D. Cassels, K.C., who appeared for the architect, Mr. Beck said that the wall was eighteen inches thick at the bottom and fourteen inches thick higher up. He agreed that it rested on gravel subsoil without footings or concrete.

Mr. S. B. Pritlove, the architect for the reconstruction work, said that two days after the work was begun his assistant found that the foreman was cutting away a chimney breast, and the strutting which had been done was not sufficient. Witness telephoned to the builders that the foreman did not appear competent, as he was taking a risk in the strutting. Later he found that the strutting had been strengthened, and that a new foreman had been put in charge. On July 7 he had a telephone message from the district surveyor that there were no footings to the party-wall of the side of No. 53, and that the wall must be underpinned. He gave instructions for underpinning, and the foreman, Bell, said on July 13 that he would begin that work next day. On July 15 he was told by the foreman that he had excavated in readiness for concrete. Witness inspected the wall that afternoon, and saw nothing to indicate collapse. He attributed the collapse to general weakness of the brickwork of the party-wall, which was not apparent by ordinary inspection. The want of bonding between the party-wall and the front and back walls, defective beams running from party-wall to party-wall, and the joist only going into the wall about an inch—these causes were not discoverable without taking unusual steps, and he saw no necessity for taking unusual steps. The party-walls on each side of No. 55 were out of plumb, and were leaning away from No. 55.

Summing up, the coroner said he thought at the most all that could be said was that there were acts of inadvertence and carelessness.

The verdict of the jury was that the collapse was due to negligence on the part of the builders' manager, but that the negligence was not criminal. They considered that the architect should have exercised more supervision, and that the foreman employed by the contractors should have warned the people in the building after the warning which he himself received.

Wolfe Memorial at Greenwich.

A public memorial to Wolfe, the hero of Quebec, is to be erected at Greenwich, where he went to school and in the parish church of which he is buried. Over £3,000 has been collected in Canada for the memorial. The Mayor of Greenwich is chairman of a committee which is considering the form of the memorial and its site. No decision has been come to yet; but three sites have been suggested for the memorial—the churchyard of St. Alfege, the parish church; an open space in front of Macartney House, Blackheath, where Wolfe's parents lived after leaving Westerham; and the main entrance to Greenwich Park.

NEW BUILDINGS IN SCOTLAND

Aberdeen.—Buildings.—The Plans Committee of the Aberdeen Town Council has approved of the plans of the following buildings :—Bungalow, Westholme-avenue, for Mr J. Blake; alterations and additions to Mile End School, Mid Stocket-road, for the Aberdeen Education Authority; house, Wellbrae terrace, for Mr. Duncan M'Gregor; house Anderson-drive, for Mr. David Wood; house Angusfield-avenue, for Mr. Thomas Riach reconstruction of buildings, Powis-terrace for Reith & Anderson, Ltd.; house, King's gate, for Mrs. J. M'Farlane.

Dunkeld.—Schools.—Plans are being made for the erection of a steel school at Dunkeld near the Scottish residence of the Duke of Atholl. A departmental committee, of which Sir Frank Baines is chairman, has been inquiring into the possibilities of using other materials than brick for schools, and it is thought that steel will solve the problem.

Edinburgh.—Home.—The Dean of Guild Court has given the managers of Edinburgh Royal Infirmary permission to proceed with the erection of a convalescent home at Moredun, Gilmerton, which will displace Moredun House, a sixteenth-century mansion. It will comprise, in addition to staffing and office accommodation, individual rooms for twenty patients. Its erection and equipment will cost about £18,000. The Court also sanctioned a petition by the Astley-Ainslie Institution, Southbank, Morningside, Edinburgh to make several important additions to the existing scheme there. Other petitions included the erection by the Bank of Scotland of a branch office and house at Liberton Gardens corner, and of ten bungalows by private owners.

Haddington. — Cottage Hospital. — The first list of subscriptions towards the estimated sum of approximately £7,000 required to build a cottage hospital for Haddington and district shows a total of £956 18s. 8d.

Tranent.—Housing.—Tenders have been accepted by the Town Council for an additional housing scheme of 22 houses, namely 12 of three apartments and 10 in one block of two apartments. The three-roomed houses are to cost £355 each, and the two-apartment houses £310.

BUILDING TRADE WAGES IN SCOTLAND.*

The following are the present rates of wages in the building trade in the principal towns of Scotland. Every endeavour is made to ensure accuracy, but we cannot be responsible for errors that may occur :—

ESTIMATING ON RIGHT LINES

Everyone whose business it is to quote for building work should master the principles upon which estimating is based. These principles are clearly explained and illustrated in

'HOW TO ESTIMATE'

by J. T. REA,

a unique and invaluable work which is not excelled in thoroughness or in scope by any similar book known.

Fourth edition (now ready). 540 pages. Price 15s. net (by post 15s. 9d.). Containing thousands of prices and hundreds of examples of analysis, showing how a builder can make up rates for himself. In view of the difficulty of fixing standard prices under present conditions, the author has included an important series of Adaptation Tables and Percentages (corrected to February, 1927), *which show how rates may be adjusted to meet variations at any time.*

Before purchasing any other book on this vitally important subject, you are invited to inspect this—the standard work which is in use by over 30,000 builders.

A Copy will be sent by return, and your Remittance refunded if the Book does : : not satisfy your requirements : :

THE BUILDER

A JOURNAL FOR THE ARCHITECT AND CONSTRUCTOR

WITH WHICH IS INCORPORATED "THE BRITISH ARCHITECT."

OL. CXXXIII. No. 4413. SEPTEMBER 2, 1927.

ATHLETICS AND BUILDING

TO suggest that there is a direct connection between the present-day pursuit of games and the art and practice of architecture appears at first sight to challenge the immortal irrelevance of "Alice in Wonderland"; and yet the paradox of that masterpiece persists in its rewd application and serves to illuminate rather than to nfuse the criticism of life. Double faults may appear remote om campaniles, but nevertheless athletics have not only a rect influence on the habits and minds of a generation but, to carried out effectively, they require a special staging. Rome still as much celebrated for the Colosseum as it is for the mple to All the Gods. The Amphitheatre at Nîmes deserves visit quite as meticulous as does the immaculate Maison Carrée. ie Field of the Cloth of Gold was no isolated freak of history; was but a brilliant link connecting mediæval with the newer ssic formal tourney. Glory and beauty were believed to be separable from prowess, and the craft of heraldry long outlived original purpose.

By the nineteenth century, field sports, while still preserving me of their special arcana, had succeeded the joust among rsons of quality, but good form and expediency had removed em from the crowd and they were practised in a natural setting erved for the few. Fox hunting retained its uniform, the stag d the hare their special mark for followers with the hounds, t the man with gun, rifle, and rod assumed an undistinguished ifti when the tall hat passed from common usage. Shooting lges and "boxes" were of too residential a nature to acquire cial character, and it was only with the popularity of racing, cket and football that the spectacular element was re-introduced. nsidering the significance and beauty of public athletic displays history, it is astonishing that the housing of popular games England should for so long have remained at the stage of the red bathing box. There is no healthier nor surer sign of im- oving art values in public life than the interest that is now ng shown in the new sports pavilions. With it we find the zer, the club colours, the striped awning, and a general sense of y accessory which should follow and enliven sport if it is to be reational in the higher sense.

The architect, when approached, will gladly respond to the mands made upon him. Roughly speaking, the problem falls o two classes, since the great difference of degree in scale nounts to a difference in kind. There is the quasi-commercial na, designed not only to accommodate and stage the players, t also to seat and shelter a vast concourse of spectators. In gland we have only to cite the Stadium at Wembley, the tre court of Wimbledon, the grand stands of Ascot and som, and in Ireland the immense additions to the yards and losures of the Royal Dublin Society. All these represent ks of major architectural importance, where mass and its osition are allied to skilled engineering capacity, and where work has a size and permanence that demands responsibility forethought on the part both of the architects and of the ies concerned with the erection. Reinforced concrete is the ost invariable material used to create these immense areas stands, and the results have so far certainly achieved a high llence in engineering æsthetics, and a promise of still better lts ahead. It is only natural, after a surfeit of engineer's ament and classicism in nineteenth-century cast iron and l, that the very austerity of these unadorned masses should e a peculiar attraction for the architect and the informed ic; at the same time, the sense of dour practicality remains ifle overwhelming to the layman, and we may hope in the re to find appearing a certain elegance and humanity to ify the weight of the general effect. A fortress gains dramatic ity by a rocky approach crowned by an expanse of naked battered wall—and it is thereby a better fortress; but a grand stand to which one has purchased right of access for a small sum would be more welcoming if it occasionally relaxed its corporate bulk and offered some friendly features, whereby the man from the Underground could feel himself to be in scale with his surroundings. It may be straining the resources of language to describe the activities of the electric hare under "athletics," but this new sport is going to require its own staging, and one hopes that the organisers may entrust the architecture into good hands.

Important as these large erections may be as collaborations of engineer and architect, the increasing number of smaller pavilions resulting from the popularity of golf, lawn tennis, football and swimming offer more intimate, varied, and therefore more attractive scope to the designer. They may be said to combine practical needs with æsthetic or functional quality in a very marked degree, and they are singularly adaptable to individual and local treatment. In short, these practical erections will be found to combine a pleasant touch of the monumental, expressed through even such small details as clock, lantern, or ornamental weather vane. They are recreational in the best sense, and those responsible for their design will be wise if they introduce the element of gaiety and even humour in colour and applied ornament. In mediæval art, humour and wit were constantly employed, and they convey a whimsical humanity that is not undignified. Functional architecture is a phrase that is often hackneyed, but it can be recognised without stretch of words as symbolising athletics in terms of good humour and good health, qualities that can readily find expression in the decoration of verandah and lounge. Concrete lends itself unexpectedly to strange devices in low relief, and it can be worked at a semi-dry state. Distemper, lines, patterns (easily removed) may add to the gaiety of restaurant or changing room. The club caricaturist might leave his mark far more tellingly on the wall itself than he would were his wit framed heavily behind mount and glass. In short, the architect should seek co-operation among those for whom he is designing and thus show them how to introduce their own character to the building.

It may be pleaded that, unfortunately, there is still a long road to travel before the typical club committee will leave the "safety first" and clearly charted track of steam-rolled mediocrity for the adventurous paths of character and individuality. Hot-water taps and practical accommodation still dominate the aspirations of the club man, and he will need persuading that good taste is not necessarily lukewarm, unpractical and expensive. The best way is to convince him through his sense and love of his sport. Show him that good planning is economy, prove to him that a gay colour scheme costs no more than one of aspidistra green without, and chocolate-brown within, that waxed oil stain wears better than varnish, and, finally, convince him that a worthy setting affects both the popularity and the influence of a club. The same man will willingly agree that fine buildings add to the morale of school life, and it should not be difficult to show him how much good humour and good will may be reflected in a pavilion, more especially if the members share in helping to provide the details and to express its character.

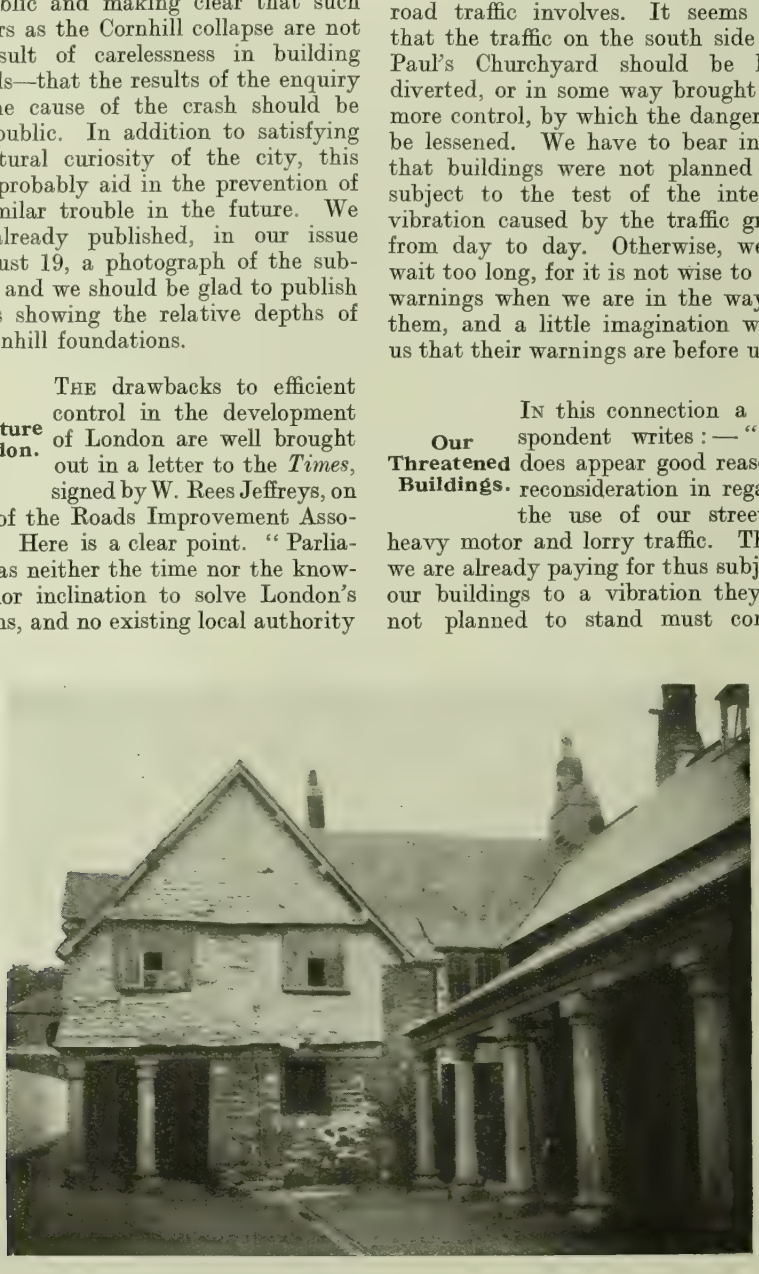
There is abundant evidence that original work and initiative are becoming popular and that buildings of character will add immensely to the prestige and quality of the club. Care and thought will live for another generation to recognise, and if the men that gave them do their work well such details will serve to inspire the players that are to follow after. Mighty hitters, forlorn hopes won, can be immortalised in high good humour to be remembered in fellowship and emulated in respect.

NOTES

The Cornhill Crash.

In view of the recent collapse of a part of the Commercial Union Assurance Company's premises in Cornhill, and of various other actual or threatened falls in the County of London, a correspondent makes, on page 343, the suggestion that it is high time that the London Building Act be added to, or amended, to provide that proper precautions shall be taken when excavating a site to safeguard the foundations of the adjoining buildings. Without for a moment joining in the alarm issued by some of our contemporaries, that there is too great an element of danger to life and property in modern building methods, we endorse the suggestion of our correspondent. At the same time, we venture to make the proposal—with a view to reassuring the public and making clear that such disasters as the Cornhill collapse are not the result of carelessness in building methods—that the results of the enquiry into the cause of the crash should be made public. In addition to satisfying the natural curiosity of the city, this would probably aid in the prevention of any similar trouble in the future. We have already published, in our issue of August 19, a photograph of the subsidence and we should be glad to publish sections showing the relative depths of the Cornhill foundations.

The Future of London.



The drawbacks to efficient control in the development of London are well brought out in a letter to the *Times*, signed by W. Rees Jeffreys, on behalf of the Roads Improvement Association. Here is a clear point. "Parliament has neither the time nor the knowledge nor inclination to solve London's problems, and no existing local authority has the statutory powers to do so." Can it be wondered that the London Society and we in the pages of *The Builder* have continually stressed this matter? London can never grow into the fine city it should be unless something wider and greater than a parochial policy guides it.

The Danger to St. Paul's.

A silence has fallen over the subject of the safety of St. Paul's Cathedral, and we must hope that this is the sign of an assurance that the operations now in progress are relied upon to secure its future safety. But meanwhile the heavy traffic of the streets increases, and we have the recent experience of what has happened in Cornhill. It is said that nature does not warn us twice, and it is in no alarmist spirit that we think it imperative to consider the threat to the security of buildings which this great increase of heavy road traffic involves. It seems to us that the traffic on the south side of St. Paul's Churchyard should be largely diverted, or in some way brought under more control, by which the danger could be lessened. We have to bear in mind that buildings were not planned to be subject to the test of the intensified vibration caused by the traffic growing from day to day. Otherwise, we may wait too long, for it is not wise to ignore warnings when we are in the way with them, and a little imagination will tell us that their warnings are before us now.

Our Threatened Buildings.

In this connection a correspondent writes:—"There does appear good reason for reconsideration in regard to the use of our streets for heavy motor and lorry traffic. The toll we are already paying for thus subjecting our buildings to a vibration they were not planned to stand must come to

The Guildhall, Totnes.

(*See page* 344.)

Portion of a Children's Window for St. Margaret's Church, York.

Designed by Mr. J. A. Knowles, F.S.A.

mean either a considerable extension o the injury and danger to existing building or some better organised control of heav traffic. It is no unusual thing, when heavily loaded lorry, drawing a traile along with it, passes down a thorough fare for the houses to shake alarmingly The accumulated effect of such vibratio cannot but be detrimental to the securit of them. In the course of one day w read of danger to old houses, and other not so old, in widely different situation through this cause, and it requires n great imagination to foresee the growin menace of this state of things. Th present discussion in regard to the re conciling of railway and road interest would be beneficial indeed if, by som adjustment of tariffs, the heavy mer chandise now carried by road could b put back on the railways. The railwa tracks are properly arranged for suc traffic, and away from the closer contac of the roads, and involve no such menac to the safety of our buildings. In thi way we could secure a more reasonabl use from roads, for, as it is at present, th menace is one not only to buildings bu to human life as well, from the congestio danger and noise which this abuse of th roads has imposed on us."

Our Museums.

Mr. H. V. Lanchester in recent article in the *Observ* makes some interesti suggestions to show how o museums and public galler might be organised so as to make a mo intelligent appeal to the public. The is no doubt, as he says, that in o larger museums, whether they be co prehensive or specialised, we "invariab find a large proportion of the visito both old and young, wandering arou looking vaguely at this or at that, b obviously finding it difficult to beco greatly interested in the treasures spre before them. Now and again son thing may catch their attention and h them for a few minutes, but as a rule th gaze wanders from one object to anoth not with the brightness of the butte flitting from flower to flower, but rat with a gradually accumulating weari that eventually drives them out of building." He does not forget to ment

ortion of a Children's Window for St. Margaret's Church, York.
D signed by Mr. J. A. Knowles, F.S.A.

e guides who have been provided, but eful though they are he argues that eir appointment is a confession of lure, "as a good public museum should its own guide, and should present its ntents in such a way that anyone epared to take an interest in them ght, without the least knowledge or eparatory study, find them opening up sorbing and provocative visions."

How to Popularise Them.

We believe these observations will be endorsed by many museum visitors, and no doubt the reason for the failure of most museums m this point of view is, as he says, at they have generally been arranged students for students. His idea for an provement is taken in part from the lway and other posters, and he thinks, l not without reason, that a poster in forecourt of the British Museum aring a legend such as "An Hour Ancient Athens" would induce ople to go inside, where Athens uld be staged "partially full-size and tially by carefully arranged models, cas, etc., all complete. With proper blicity one would get a large and ited crowd who would grasp more in hour than they now do in a year, if perly handled. The Natural History seum might counter with The Birds Bass Rock,' or 'Etna in Eruption,' across the road we might read 'The rt of Charlemagne.' Really, if once gs got going on these lines, it is difficto put a limit on the possibilities for rtainment and education." No ot with proper publicity and the t stage setting the public would be,

Oven in South wall of Smarden Church, Kent.

attracted; but while we think something might be done on the lines indicated, there are obvious limitations which Mr. Lanchester would be one of the first to admit.

A Mediæval Wafer Oven.

The church of Smarden, in Kent, still possesses the oven in which the sacramental wafers were baked, and a part of a mediæval, coloured, enamelled reliquary in which some relic was enshrined. The photograph on this page shows clearly the appearance of the "wafer oven" as it is to-day. It is in the south wall of the chancel, not far from the east end. The situation of the oven so low down near the floor is to be accounted for by the alteration in the floor level. Mr. Halford Mills, at one time a resident in Smarden, and to whom this oven has long been of great interest, describes it as follows:—"The oven-opening in the wall is 18 in. wide, the oven 18 in. deep with arched top 18 in. to point of arch. The floor is of Beltersden marble 4 in. thick, burnt away irregularly at the front edge and perforated near the centre. The aperture inclines outwards, but there is no outside opening. At the top is a flue about $2\frac{1}{2}$ in. leading into crevices in the rubble; this also has no outside evidence. The entrance, chamfered, is of the same facing stone as other niches in the chancel. The rear 12 in. of the oven-sides is of $\frac{1}{2}$-in. tiles (red) laid flat, showing attrition as by fire, $1\frac{1}{2}$ in.–3 in. from the floor."

A Rare Relic.

So far as we are aware, no other wafer oven is to-day in existence in any church, and it is probable that such accommodation for baking the wafers in churches was most uncommon, for had such been the case remains in some form or other would exist in churches to-day. Only one church in England, Feckenham in Worcestershire, still retains the irons by which the wafer was held near the fire, though the British Museum contains a fine foreign example. The fire in the oven would need to be but a small one, for the wafers were but a little dough in the form of biscuits held by the cook in the wafer iron or tongs. The aperture at the base of the oven is a somewhat suspicious fact, but coupled with the upper orifice, it may have served for the purpose of draught, and it must be borne in mind that a piscina is close at hand. The photographs which we give are by Miss Rathbone, of Smarden.

Whistler's "Battersea Bridge."

It is not always remembered that a picture is not good because it is new and different to inherited traditions of painting, but because it is good in itself. Nor is the large amount of the sum paid for it any dependable criterion. The instance given in the report on the Tate Gallery, where the National Art Collections Fund had to pay £2,000 for Whistler's "Old Battersea Bridge," because the opportunity was missed when it was first sold, points quite the other way. The picture was really not worth much more than the original price first paid for it, being slight and without much quality; quite a nice impression, but absurdly over-valued later, and so the money paid for it was very extravagantly expended. Half-a-dozen good or better pictures could have been secured for the money spent on this one.

Adam Street.

Now that the long delayed widening of the Strand by the Adam Street opening is taking place the admirers of Adam Street architecture will be watching with such intent the fate of this interesting record of the Adam style. There are doubtless many reasons to be advanced for demolishing this work and replacing it with lofty specimens of our modern work, but, on the other hand, one cannot help feeling that the profession, and many outside it, will look with deep regret if it disappears.

Views of Old London.

One of the most interesting of the annual art exhibitions of London is the collection of prints and water colours relating to London in the possession of the London County Council. The exhibition owes not a little of its success to its arrangement, which is both chronological and topographical, a method by which coherency is obtained. A new feature is on view, illustrating the topography and history of North-East London. Stepney, Poplar, Bethnal Green, Shoreditch, Stoke Newington and Hackney are included in this section. For some time it has been the Council's practice to hold this exhibition in the County Hall, Westminster Bridge, S.E., where the prints may be viewed on Saturdays from 10.30 a.m. to 12 noon, and from 1.30 p.m. to 3.30 p.m. Application should be made to Room 114.

Wafer Oven and Piscina in Smarden Church, Kent. (In South wall on right.)

GENERAL NEWS

Professional Announcement.

Mr. S. Rowland Pierce has removed from 15, Gower-street, Bedford-square, W.C.1, to 39, Great James-street, Bedford-row, W.C.1. Tel. No.: Museum 6235.

Special Libraries Conference.

It is expected that some 200 organisations will be represented at the Fourth Conference of the Association of Special Libraries and Information Bureaux which meets at Trinity College, Cambridge, during the week-end September 23-26.

Memorial to T. W. H. Crosland.

A tablet in memory of the late T. W. H. Crosland has been placed on the façade of the Yorkshire Penny Bank, 76, Dewsbury-road, Leeds. Subscriptions towards the cost may be sent to Mr. E. Kilburn Scott, 84, Kingsway, London, W.C. 2. The tablet is of Doulton ware.

Registration as Probationer, R.I.B.A.

Attention is called to the fact that the Council of the R.I.B.A. has decided that after December 31, 1928, no one shall be registered as a Probationer unless that person has passed one of the recognised public examinations in the required subjects. A list of the examinations recognised may be obtained free at the R.I.B.A.

The Treasury: Ravages of Death-Watch Beetle.

The 400-year-old oak beams which support the first floor of the old building of the Treasury are crumbling away. The discovery was made when Office of Works men were called in to replace floorboards which had given way. It is believed that the damage has been caused by the death-watch beetle, but the extent of the ravages has not yet been ascertained. The old beams are now being replaced by modern steel girder construction.

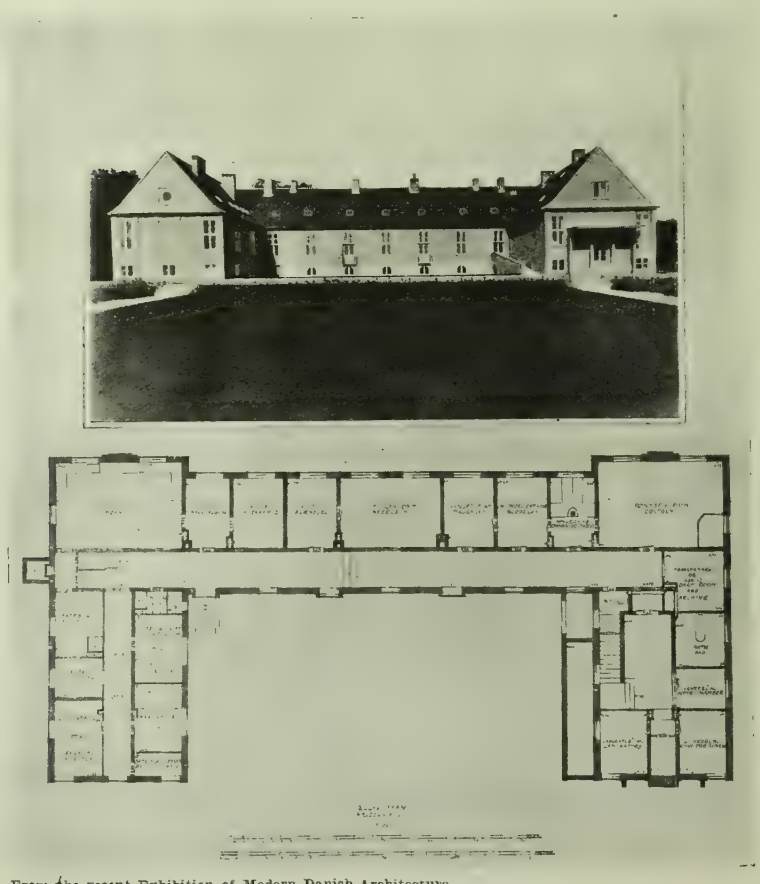
London University: Bloomsbury Site.

A preliminary conference has taken place between the Senate of the University of London and the London County Council with reference to the planning and development of the Bloomsbury site. The Senate have considered the need which will arise for closing certain roadways and gardens, in connection with this work, on the north side of the British Museum, and it was agreed that efforts should be made to reach an agreement with the local authorities who are concerned with the district before the sanction of Parliament was asked to a scheme. The question was discussed at the preliminary conference, several proposals were considered, and it was agreed that a further meeting should take place after the recess, probably early in October. The Senate also intend to consult the borough councils of Holborn and St. Pancras, who are the other local authorities concerned.

Building in the Swinley Forest.

In the House of Commons recently, Mr. Somerville asked the Minister of Agriculture whether he had fully considered the leasehold and building projects now contemplated by the Commissioners of Crown Lands in the Swinley Forest district, between Bracknell and Bagshot, which had hitherto been one of the most beautiful open spaces in the country; and whether he could give to the residents in Berkshire, and to the public generally, some assurance that the amenities of the district, especially trees and other natural forest beauties, and access for the public to this part of Berkshire would be preserved.

Mr. Guinness said he had fully considered the proposals for the development of the Crown Estate in the Swinley Forest district. The Commissioners had not lost sight of the fact that it was their duty, not only to the general public but also for the purpose improving the property under their charg to preserve the rural amenities of the estat No public rights exist over the land, but t Commissioners were not proposing at prese to exclude the public from the unenclos parts.



Glasgow University: The New Building Scheme.

A large part of Glasgow University's i portant post-war building scheme for the co pletion of the western quadrangle will ready for occupancy when the new sessi begins in October. In keeping with t Gothic style of the original building, t addition has three flats on either side of t chapel, and provides two staff rooms, s teen laboratories, with an equal number professors' rooms, and six large class-roo A simple dignity is noted in the design the chapel, which is expected to be rea early next year. It is arranged with a na and chancel, the latter portion being dev oped to form the war memorial proper of t university. Placed round the sediliæ will tablets containing the names of fully students and past students who sacrific their lives. Stalls for the professors arranged down each side of the eastern h of the nave, and in the western portion th is accommodation for students and othe Surmounting the open timber roof in oak a fléche, in which will hang the bell from Old College in High-street. The original c of the scheme was considerably over £100,0

The Richmond Hill View.

Richmond is the centre of two conte plated improvement schemes which, althou no definite action has been taken in rega to either of them, are being watched w some concern by lovers of the Upper Tham lest they should impair its beauty. One a town-planning scheme of the Richm Corporation, which would involve a widen or other alteration of Petersham-road, wh runs below the Terrace and Richmond Pa on the way to Kingston. The other is, s the *Times*, an arterial road scheme, promo by the Ministry of Transport, which wo run through the old Deer Park (adjoin Kew Gardens) from Kew-road, and be ried across the river by means of a bridge at the Richmond Lock and Footbri (below the old bridge at Richmond) to Margaret's, on the Middlesex side.

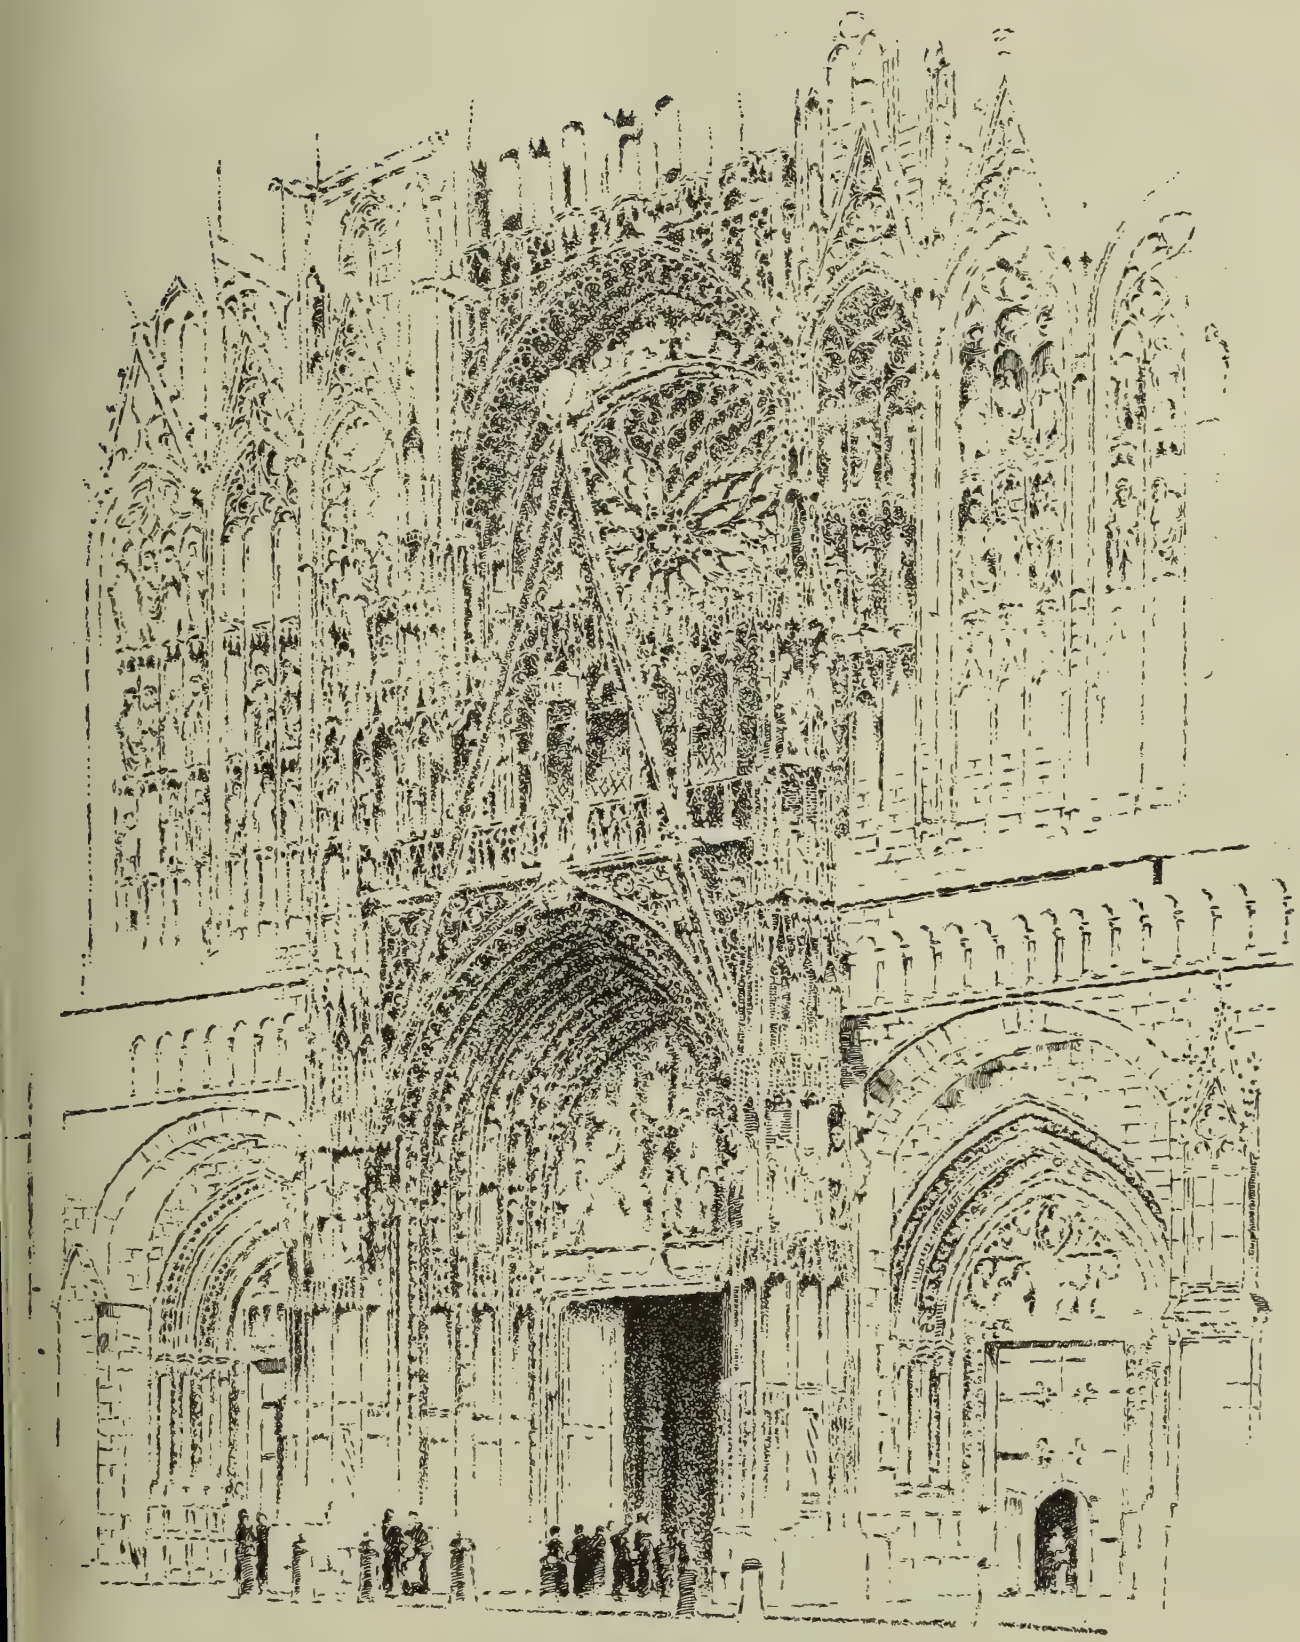
Both improvement schemes are, as yet, in the stage at which plans are being pared. It is officially contended that neit if carried out, will affect the view of river from Richmond Terrace.

From the recent Exhibition of Modern Danish Architecture.

Hospital at Ringe.

Andreas Jensen, Architect.

OBITUARY



Sir John Benton.

It is with regret that we record the d of Sir John Benton at Eastbourne at the of 77.

The son of Mr. John Benton, of Sh haugh, Banffshire, he was born on Augu 1850, and studied at Aberdeen and E burgh Universities. He was one of the of the students who entered the Royal In Engineering College at Coopers Hill or opening in 1871. He passed out in two y but he did not arrive in India until he wa His first service was on the Sirhind and Doab Canals, and later on the Multan Chenab irrigation works.

In 1897 Benton was lent to the Govern of Burma, first as superintendent engine Mandalay, and afterwards for a yea officiating chief engineer.

In 1902 he was created C.I.E., an the end of that year he returned to Punjaub to succeed Mr. Preston as Engineer and Secretary to Govern Benton retired in August, 1905, unde age limit, but in January, 1906, was re by Lord Curzon and appointed Insp General of Irrigation for the whole of again succeeding Mr. Preston in that He was promoted to K.C.I.E. in 1911 finally retired in 1912.

Rouen Cathedral: The West Front.

From a pen-and-ink study by Mr. H. Frank Hoar.

CORRESPONDENCE

[While we are glad to publish letters on professional and other matters of interest to our readers, it must be understood that we do not necessarily endorse the remarks of correspondents, who will oblige us if they will express their views as briefly as possible.]

Exemption of Architects from R.I.B.A. Exams.

SIR,—I have read with interest the letter of "XYZ" in your issue of August 12, and that of Mr. R. D. Robson in the issue of the 26th. No doubt there will be others who will point out to "XYZ" that a School of Architecture which enjoys exemption from the Intermediate and Final Examinations of the Institute does not in fact secure exemption for its students, but merely the privilege of conducting itself examinations equivalent to those of the Institute. The standard of these examinations is the same as that of the corresponding R.I.B.A. Examinations, and the machinery of the Board of Architectural Education ensures that this standard is maintained. It would naturally appear unfair if entrance to a school permitted a student to escape the R.I.B.A. examinations altogether, but "XYZ" will understand from the above that as a matter of fact the students merely sit for the examination under a different roof.

As regards Mr. Robson's very sensible remarks on the subject of office training, he will perhaps allow me to point out that neither the R.I.B.A nor the schools hallmark the student with the Associateship or any kind of diploma until the student has had a certain amount of experience in an office or on other building work. The R.I.B.A. demands twelve months' office experience before it admits the otherwise fully qualified student to the Associateship. This in itself is a guarantee, and the schools follow the same rule with regard to their diplomas, the period of office training varying from six to twelve months. Mr. Robson will see, therefore, that the suggestion contained at the end of his letter has in fact been in operation for some years.

As misconception regarding the actual procedure of training in the recognised schools is still very prevalent, you will pardon me for trespassing on your space to make these few points which will almost certainly have occurred to others who like myself are interested in architectural education.

HOWARD ROBERTSON,
Principal, A.A. Schools.

SIR,—I hope that Mr. Robson's letter, which appeared under this title in your journal for the 26th ult., will receive the consideration it deserves. I am afraid that to-day examinations have become a fetish, and are stressed to that extreme that in certain instances, rather than being beneficial, they are injurious, in that they keep out from the R.I.B.A. many excellent and practical architects. To a junior member in the profession, the desirability of taking the exam. is certainly a consideration; but to exclude persons of ripe experience by pressing the examination requirement is, in my judgment, detrimental to the highest interests of the profession. To standardise architecture by examination procedure is to limit the natural and instinctive faculty of imagination, and while I, for one, place great emphasis on the importance of an architect's general education, my appeal is that this should not be stressed where in practice an architect has proved his skill and deserves recognition by the conferment of corporate membership of the R.I.B.A.

H. PREECE JAMES.

The Salaried Architect.

SIR,—I have read with interest your correspondent's letter on the above subject which appears in your issue of August 26. The points he raises have not been ignored, but were dealt with to some extent in former letters on this subject. It is now many years since I first wrote in your broad-minded and progressive journal on this subject, and the issues have been somewhat obscured by too personal views. If salaried architects would "think more generously" there would be little difficulty in coming to a decision on the principles involved.

Your correspondent says that "It is a truth of employment that if you have a good man it is best to let him alone." A good man in the Civil Service has his obligations to his employers (the taxpayers) as well as the lesser gifted, and it must be remembered that to-day we have scores of highly gifted men who are real artists at their craft and whose talents are by no means utilised to the best advantage because of the practice of allowing salaried architects to do private work. Your correspondent proves nothing by his letter, and it would seem obvious that the most "generous interpretation" of the whole matter is that the greatest good for the greatest number is the ideal policy to adopt in this matter. A good man, or rather a specially gifted man, will always come into his own provided that no form of subsidising a special class is tolerated.

B. B.

Vibration on Buildings.

SIR,—A word further on this important subject: Would the National Physical Laboratory include in their investigations as to "vibration on buildings" a stone-built or concrete-block built building and a brick-built building, both closely situated and on the same thoroughfare, in order to ascertain if there is any difference as to the resisting power of vibration on a building erected with fewer joints (as one built with blocks) and one built in brickwork, with its many joints?

ANDREW SOUTH.

Birmingham Civic Centre Competition.

SIR,—In view of the fact that this competition was INTERNATIONAL, is it not high time that the traditional figure of John Bull was altered to conform with art?

O. NEWBOLD.

STABILITY OF CITY BUILDINGS

We take the following from a letter addressed to the *Times* by Mr. J. Ratcliffe Cousins :—

"In Burgon's Life of Sir Thomas Gresham is an extract from Angell's 'Historical Sketch of the Royal Exchange' of particular interest to-day :—

"'in 1580 A.D. the Royal Exchange was presented as dangerous for those which walk under . . . also at a certain grate right over against the South dore of the said Royall Exchange, in the middle of the street and common passage thereof, is a great hole which of long tyme have so contynued, to the great danger, hurt and loss of life and limb and maming of both man and beast.'

"Again in 1598 'the S. and S.W. ends of the Exchange were presented as cracked and dangerously decayed.' It is off this S.W. corner that the Cornhill subsidence and building collapse have taken place. The Great Fire of London, 1666, settled the Exchange problem of that date, for 'little of it was left except a corner with a picture of Sir Thomas Gresham' (Pepys).

"The selection of 'the site of the City' as a desirable place of residence was due to the geological structure of the subsoil. The great consideration was the water supply. At first the river water satisfied the requirements of the population along its banks, but at an early date it was found that an excellent water supply could be obtained by sinking shallow wells, down to the impervious London clay, through the 30-ft. to 40-ft. of river gravels and sands which formed the hillocks and ridges above the north bank of the Thames. On this site was built Roman London, and the square mile within its walls satisfied, for some centuries, the residential requirements of the population."

CHAPEL OF ST. THOMAS BECKET, BRENTWOOD.

ON this subject, to which reference w made in our issue for August 19, we have r ceived the following communication from M Laurence King, architectural student University College, London:—

The Abbot of St. Osyth's Priory, ne Clacton, which was founded before 1127 the then Bishop of London for Aust Canons, built a chapel at Brentwood in 12 for the use of the abbey's tenants, and a in order to catch the offerings of the pilgri as they rested at Brentwood on their w to Canterbury. The chapel was dedicated St. Thomas à Becket, and came under t mother church of St. Peter's, South Weald

Mr. D. W. Coller, in "The People's H tory of Essex," says: "There seems, ho ever, to have been some jealousy in t matter, lest the abbey should intercept a of the good things which ought properly go into the net of the priest of South Weal but after considerable negotiation, stringe regulations were agreed to. The chaplain w to swear that he would not knowingly inju the mother church or receive any of t parishioners to communion, confessions, purifications on Sundays or holidays witho the parson's leave, except on the day of S Thomas's passion or translation and at t time of the fair; and if any profit arose fr the parishioners he was to pay it over to t mother church. The parson might, if pleased, officiate during the whole time of t fair and receive the offerings to his own u but at all other times of the year the off ings of strangers and passengers were to for the maintenance of the chaplain, who w to pay yearly two pounds of wax to t parson."

The chapel fell into disuse early in t nineteenth century, and was partly destroy about 1870. Originally it consisted of na 27 ft. wide, chancel 27 ft. in length by 17 6 in. wide, and tower 8 ft. square with spi All that remains now is the west wall, tow and a length of 13 ft. of the north wall, whi contains a two-centred headed doorway continuously moulded jambs with a holl chamfered four-centred rear arch. The d is of elm battens with strap hinges. E of the doorway is a trefoiled two-centr headed holy-water stoup of the early fo teenth century, the basin of which has b destroyed. The tower, c. 1400, has east a south two-centred arches of two moul orders. In the north-west angle there i stair approached by a four-centred hea doorway. Of the west wall only the lo half remains, revealing a doorway similar that in the north, and above the remains the former west window. The walls are flint and pebble rubble with courses of f stone in the west wall and with dressings a sandy limestone.

LAURENCE KING
(Architectural student,
University College, London).

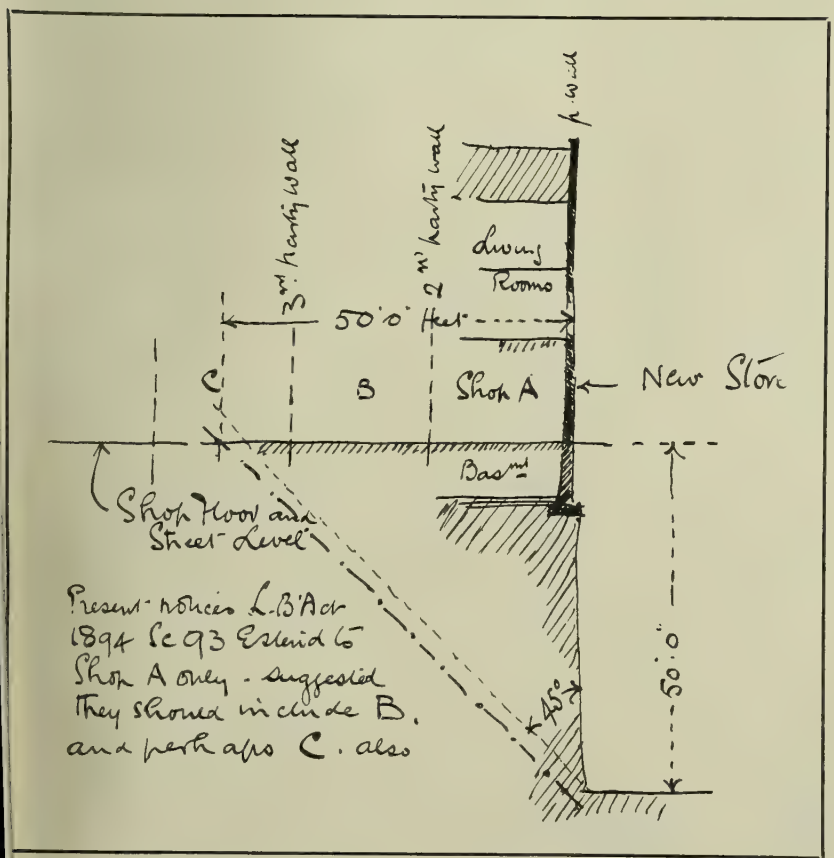
Roman Excavations near Conway.

Excavations at Caerhun, near Conway, the Roman fort Conovium have, it is ported, revealed a number of interesting coveries, the most interesting of whic concerned with the southern gate of the f Unlike the gateway to the east, which uncovered during last year's' operations, appears to have been partially blocked u Roman times. Further investigation on point is awaited with interest, inasmuc the blocking up of gateways is character of the later periods of the Roman occupa whereas at Caerhun the area of the fort so far yielded nothing which can be sai furnish proof that the occupation of the went beyond the middle of the second tury. Apart from the south gate, a t barrack building has been excavated, a part of another structure, presumed to h somewhat similar dimensions. This buil cannot be disturbed to any further ex as it lies under the Caerhun churchyard

COLLAPSING BUILDINGS

Sir,—Your note on page 302 of your last ue induces me to make a suggestion and k a question or two. Under the London ilding Acts the height of a building is ed, absolutely as to maximum, relatively regard to adjoining buildings, others across e street and its own light-courts within; ith special exceptions for towers, etc. But far as I know there is no limit whatever to the depth it may go below the pave-ent, the only limitation being on the use these parts as habitable rooms.

The Cornhill smash appears to be due not the heavy weight of a skyscraper on a or foundation but to a deep excavation ade alongside a building of moderate height. o lives were lost, consequently no inquest as held, neither, so far as I am aware, will y kind of *public* inquiry be held. The ajority of architects will never know the chnical details of what happened and may rmit exactly the same mistake (whatever was) in the future. *The Builder*, to which ey might look for information, has not pub-shed photos or plans or sections. There are any obvious reasons why these do not see ght, but are there not other and better asons why they should? Is it possible for u to give us a section through the crashed all showing the relative levels of the lowest ors of the existing building and the one course of construction, and the level of rnhill roadway, and, assuming greatly in-eased depth for the new erection, the nature the support to the old? The daily papers ve given the depth of the new excavation fifty feet, but perhaps this is exaggerated. Under our present procedure, before the w work was started, two sets of notices ould be given to the adjoining owners, one to party-walls (if any), the other under ction 93 (1894 Act) "going below and with-ten feet of adjoining foundation," but ese notices *apply to adjoining building only*. In modern circumstances I venture to suggest that is insufficient. For example, suppose a row of existing shops with one basement story below and living rooms over, each 20 ft. frontage. A new Selfridge acquires a dozen or so, and the new store is to have a basement 50 ft. deep. Surely this affects not merely the adjoining shop but the second and perhaps as far as the third party-wall beyond that. I venture to ask if the time has not come when excavating for a basement that notice should be given to *all* owners within a radius equal to the depth of the proposed basement, and then with procedure similar to the present a conference of the owner's surveyors should take place to discuss and arrange the necessary precautions, underpinning, or modification of the plan to be undertaken. Step by step this can perhaps happen now because building owner "X" gives notice to adjoining owner "A," and "A's" surveyor requires certain underpinning, which in turn requires notice to his adjoining owner "B," and so on. The new procedure would bring all these in at the outset as soon as the depth of the new basement was fixed, and the new notice with its wider radius would in narrow streets extend to buildings on the opposite side of the way, and should include the road, sewers, pipes, and public services in between.



Notices and precautions would, however, still leave basement floors at all sorts of levels, and for some time past I have wondered whether a sort of "zoning" method ought not to be applied in certain areas, and just as we have "frontage" lines in the street, so below all new building should go down to a definite uniform level, say, 20 to 25 ft. below the pavement; but owing to large buildings on hill sites (the Cecil and Savoy Hotels, for example) it is difficult to frame a working definition. In the interests of the community some limitation of building below ground seems to be as essential as the limitation above.

Complications due to party walls are often avoided by giving each building its own external walls. By bringing into the matter all buildings within 45 degrees of the bottom of a new excavation, perhaps a useful check might be placed on present-day deep basements.

A small cause will sometimes start a big slip. I speak feelingly (and not as an alarmist), since once I was buried by a fall which came without warning, and it took a gang of men 15 minutes or more to dig me out. That excavation was extensive, but not more than 12 ft. deep. It was in an open field, there were no adjoining buildings; the undisturbed ground was so firm that most of it stood quite upright without strutting of any kind. The concrete foundations had been completed, and all was well. The shoot used for the bags of cement and the concrete materials was also used for the bricks, two at a time, as a man lifted them from a small stack (one cart-load) just delivered and placed on the verge of the excavation. Why a few bricks brought about a collapse and the far heavier concrete material did not is not clear, but I can testify that it did, and if that can happen in a 12-ft. excavation, and merely a cartload of bricks on the verge, how very much more likely is it to happen if the hole is 30 to 50 ft. deep and a six- or eight-story building stands on the edge.

Perhaps, in consequence of the personal experience, I should not like to live in the quarters over the shop while the big store (in my example above) dug a basement 50 ft. deep alongside the party wall. Of course, the contractor would be insured against third-party risks, but financial compensation *after* the accident is not everything; I should want to be provided with suitable temporary accommodation from the outset until the risk of accident was passed.

Horace R. Appelbee.

Basement Construction and Notices under the London Building Act.

MODELS OF BUILDINGS*

The interpretation of architectural drawings requires special training, and may be sometimes misleading because incomplete. "Judged as an explanatory medium" between the minds of the architect and his client, models play an evidently useful part. In modern architectural practice, moreover, "models may be made to help in the complete visualisation of the problems of design," including such questions as lighting, internal communications, surroundings, and "the ebb and flow of human activity." At the same time, "the art of model-making is itself fascinating and appeals to an instinct of craftsmanship." The materials employed may range from Brunelleschi's turnips to the ivory and gold of the oriental model-artist; the degree of finish may be that of the rough paper model, lightly tinted to suggest texture, to the elaborate miniature, such as those illustrated, to which the professional model-maker has brought immense thought, time and skill; the scale may be full-size, or fantastically diminutive. As a work of art, a model holds a place of its own, and few people are proof against the charm of the miniature representation of familiar objects. But the author of this small handbook on models of buildings is not content with the merely theoretical or artistic standpoint, but supplies also practical directions, such as those for obtaining patterns of the "true shape" of curvilinear bodies, as well as indicating the best methods of using various materials in model-making. He expresses the opinion that "it would benefit architecture if a higher standard of model-making were to be reached."

K

THE BRITISH ARCHÆOLOGICAL ASSOCIATION

EXETER CONGRESS—III.

(Concluded from last week's issue.)

THURSDAY.

A long day's travelling was set before the party as they started from Exeter at 9 a.m. The first place visited was the very interesting old town of

Totnes,

which was approached through Kingsteignton and Newton Abbot. The guide was Mr. C. F. Rea, who knows much of the history of the old town. The party were welcomed by the Mayor in the Town Hall, which was formerly part of the buildings of an ancient Priory founded by Judhael of Totnes, and granted to the town by Edward VI. to be converted into a Guildhall, a prison and a school. In his address the Mayor remarked upon the antiquity of the town, which is one of the oldest boroughs in the country, and was a walled town. The first charter was granted in 1205, and there is a list of mayors of Totnes extending from 1377 to the present day. It could boast of a mint, and there are in existence pennies of the Saxon king, Ethelred. Totnes was the principal manor of Judhael the Briton, who helped the Conqueror to capture the West Country, and received from him over a hundred manors. He built the castle in stone, the keep of which remains in simple grandeur overlooking the town. It has been described as the "Chester of Devon" on account of its walls. It has a noble 15th century church, while the Brutus Stone tells of the myths of bygone ages, and is supposed to mark the place where Brutus of Troy landed. It is a granite boulder situate on the north side of Fore Street, and from time immemorial proclamations have been made on this spot, whence the "bruiter," or town-crier, in former days "bruited the bruits" which reached the town. The Mayor concluded by bidding a hearty welcome and declaring that Totnes was honoured by the visit of the Association.

The President thanked the Mayor for his kind welcome, and Mr. Rea gave a learned address on the history of the town. He referred to the story of Brutus Stone. It was an old story, and contained a germ of the truth. We may leave out Brutus and Troy, but there is no doubt that people came here from the Mediterranean coasts and set up these stones, their megalithic remains, such as Stonehenge and the stone circles and menhirs on Dartmoor and elsewhere. The Hall in which they were assembled was part of the Priory buildings. At the Dissolution these were bought by the town and given by the inhabitants to Henry VIII. with the expectation that he would return them to them. This the avaricious monarch failed to do, but Edward VI. repaired his father's fault and presented the buildings to the town for the purpose which has already been recorded. There was excellent feeling between the monks and the Corporation, and an agreement was made between the Mayor and the Prior to build the beautiful church. It was a Corporation Church of which the Prior was rector. The town was very rich in its Records. The series of Gild Rolls, some of the oldest in the kingdom, date from the beginning of the 13th century. The Third Crusade assembled on the Dart when Totnes was a port, and the merchants obtained the right to establish a Gild from Richard I. about the year 1189, which the Charter of King John, dated May 10, 1206, confirmed. Thus, Totnes is one of the oldest boroughs in the kingdom. In 1913 the original deeds of the Priory, including the grant to Judhael, were discovered in a private collection, and, with the Gild Rolls, Charters and Records, preserved by the Borough, form an exceptionally full account of the town and its government.

Exeter Cathedral, from the Deanery Garden.

The company then adjourned to the church of St. Mary, and our guide informed us that although the present building was erected about 1425, in 1450 the overseers were instructed to visit the belfries of Callington, Buckland Brewer, Tavistock and Ashburton, so that Totnes might have one superior to the others. In 1459 it was decided to divide the chancel from the nave with freestone, "just as is the Cathedral of Exeter." Hence arose that beautiful stone screen we admire to-day. There are very few stone screens in Devon.

Inside the church are preserved some of the stonework from the early Norman Church; the grant of an Indulgence by Bishop Edmund Lacy in 1432 of forty days to all contributing to the rebuilding of the church; and a theological library in the room over the porch, containing the works of SS. Augustine, Ambrose, Gregory and of the "High and Mighty K. James," the Homilies of St. Chrysostom, Birkhead's "Protestant Evidences," and Walton's Polyglot. There is a plaster cast of figures on the tower showing a figure representing the Godhead, and figures of St. George and St. Leonard, the former the patron saint of the townspeople and the latter of the Benedictines.

Time prevented a visit to the castle, and the party reached Dartington Hall, the oldest historically mentioned sites in Devon, for on December 26, 833, Eagbert, King of the West Saxons, granted Durentunehomm to the daughter of one of his thanes in exchange for a manor in Dorset. It is an amazing building of immense size, with a great roofless hall. The mansion has fallen into excellent hands and is being rescued from ruination by the present owner, Mr. Leonard K. Elmhirst, a rich American, at immense cost.

After luncheon at Totnes the party visited the ruined castle of Berry Pomeroy, which was described by Mr. Hugh R. Watkin. The manor since the Conquest has been held by only two families, for 478 years by the de Pomeroys and for 381 by the Seymours, Dukes of Somerset. The picturesque gatehouse and protecting walls and towers were built between 1320-30. It was bought from Sir Thomas Pomeroy in 1347 by the famous—or infamous—Protector, Sir Edward Seymour, first Duke of Somerset. The fourth Seymour

Domestic Buildings, Dartington Hall.

owner, second Baronet, and great-grandson of the Protector, built the large block on the east of the enclosed court at a cost of £20,000. It was never completed, and the castle remains a ruin.

The next stopping-place was Compton Castle. Until about the year 1320, the site was the home of the de Compton family, when it passed to Geoffrey Gilbert, whose descendant, Otho, seneschal of Torre Abbey, rebuilt the dwelling in its present castellated form, between the years 1446-75. The Chapel may possibly date from Norman days. Surrounded by high protective walls the plan formed roughly a flattened H with the large hall in the centre and towers at all four corners. The outer court is now roofed over the ground floor, and only the east wall, thus used, of the hall remains. The north wing adjoining the chapel formed the family apartments; a squint window through the south east corner of the solar enabled the occupants to see all arrivals in the outer court. The south wing was allotted to stabling, stores, kitchen and the housing of the retainers and guard. The exceptional defensive precautions in the architecture make Compton Castle almost unique among fortified private residences. The fact that in 1547 the French had attacked Place House at Fowey, the gallant defence of which, by the wife of Thomas Treffry, is remembered to this day, explains the precaution of Otho Gilbert.

Leaving Compton Castle, the party proceeded via Chelston to Torquay, where they were hospitably received by the Torquay Natural History Society and entertained to tea, and an address was given by the President of the Society on its work and achievements. We then passed on to Bishop's Teignton, which was described by Mr. P. M. Johnston, who said that a Saxon church formerly existed here and another pre-Domesday church. The manor belonged in 1086 to the Bishops of Exeter, hence the name Leofric was the builder. The remains existing of the palace and domestic chapel of the Bishops of Exeter, erected in the 13th century. The chapel had the right of sanctuary. In a letter to Pope John XXII. in 133 Bishop Grandisson described it as "a beautiful structure." There is a three-light east window, south doorway and stoup, and ivy-clad walls and mounds indicating foundations. The chapel was dedicated to St. John Baptist and St. John the Evangelist. In the 15th century ordinations were held there. The church of St. John Baptist was savagely pulled about by "restorers" in 1815, and again in gentler mood in 1857, when the floor was raised

Totnes Church.

id damp! An old drawing of 1808 shows ave with north aisle and a central axial er. This last was pulled down in 1815, l a sham Norman tower erected at the st end of the north aisle. Few churches re undergone worse evils of drastic restora-n. Nearly all the external features are dern. It retains, however, the remark-e features of a grand Norman west door-y, with one of the two examples in Devon beak-head ornament and carvings of thical or classical subjects on the capitals. e tympanum of a south doorway now built o the surface of the south wall is orna-nted with a subject that is unique on Nor-n doorways in the British Isles, whereas in ance there are about 20 examples. It is e Adoration of the Magi. It is almost of ental character. We see the Star, the sa Mundi, the Blessed Virgin and Holy ild, and the Magi approaching. This rving shows the incipiate of the teaching the increased veneration of Mother of God. e church has a fine Norman front carved th the Greek honeysuckle and other orna-nts. The north aisle arcade of horse-shoe nicked, semi-circle arches is very unusual the date (c. 1390-1400) and has six capitals riously carved with natural and conven-nal foliage, showing priests, three birds, beautiful early Perpendicular traditional von forms of vine, rose, oak, dragon, and ge knot-work.

he party returned to Exeter, and in the ning listened to an excellent lecture by L. G. Henderson on "The Bridges of on and Cornwall."

FRIDAY.

his day was spent in a long tour, includ-several interesting churches and halls, that gem of mediæval architecture, ry St. Mary. The first place visited was

Cadhay Hall,

property of Major B. Williams-Powlitt. Tonar described it. It is a Tudor ion, largely sixteenth century work, is built of Beer stone from the material e Collegiate buildings that was granted ohn Haydon, whose family continued for many generations. The earlier is still seen in the oak roof over the and in some of the walls. There is a t quadrangle, with an entrance in the e of each side, above which are stone s containing the figures of Henry VIII, rd VI, Mary and Elizabeth. In the wing is the Long Gallery, a typical re of late sixteenth century work.

sing on, the party arrived at

Ottery St. Mary,

nost beautiful and interesting church evon. Lord Coleridge had kindly ed to describe it, but was unavoid-bsent. His place was well supplied, er, by Mr. Harbottle Reid. It is t to describe this wonderful church in a small space. Canon J. Neale Dalton, of Windsor, ten years ago published a large quarto volume on it with the Statutes (1338-1339), edited from the Exeter Chapter MSS. and the Winchester Charterbury. It is a noble volume, with many illustrations; but want of space prevents any further reference to it here. The manor was granted by Edward the Conqueror to the Church of Rouen, but there is no evidence that there was a church here before Bishop Bronescombe dedicated one in 1259. Bishop Grandisson in 1335 bought the Manor from the Chapter of Rouen, and erected the present church and founded a college, with warden, minister, precentor, sacristan, and four canons. The church was used by the canons, the nave and aisles by the parishioners. The church is Exeter Cathedral in miniature. It consists of nave and aisles, with a large chapel on the north side, transept formed by two towers, a chancel with aisles and a small chapel on each side, and an eastern lady chapel. The great peculiarity is the transept formed by the two towers, and in this respect resembling Exeter Cathedral—the only two instances of transeptal towers in the kingdom. The extra north, or Dorset, aisle was built in 1520 by Cecily Bonville, Marchioness of Dorset, and has a fan vault with pendentions. She was afterwards Countess of Stafford and the Stafford knot is seen in the decoration. The church was restored in 1849 by the exertions of the Coleridge family, Sir John Taylor Coleridge being the chief promoter. Boldness and simplicity rather than richness are the characteristics of the exterior. Bishop Grandisson was so busy on his work on the cathedral that he had little to spare for the adornment of Ottery. The reredos was restored by Mr. Blore. It was discovered much mutilated behind the wainscoting, having been covered up in Queen Elizabeth's time. The arms of Grandisson, Montacute, Courtenay, England and France, and the Earl of March are displayed. There are three very good sedilia. A beautiful stone gallery (perhaps a roodloft) separates the Lady Chapel from the ambulatory. There are some good misericords, consecration crosses, fine sedilia for four priests, a pillar piscina. The Grandisson tombs, north and south of the nave, are very remarkable. The canopies of the effigies of Sir Otto Grandisson, brother of the Bishop, and of Beatrice, his wife, are very good and striking. The clock is remarkable. It was fashioned in 1340, and is designed to show the age of the moon as well as the hour of the day, and is of the same date as that in Exeter Cathedral. The gilded lectern in the Lady Chapel is coeval with the College, and bears the arms of the founder. The church has had some vicissitudes. Fairfax, during the Cromwellian wars, quartered his troops and horses in it, and they probably broke all the old glass windows and decapitated many of the stone effigies.

The party then passed on to the interesting manor house of

Sand,

now owned by Mrs. Sheldon. The house was built in 1594, and has a fine hall and screens and circular staircase. It has been the home of the Sand, Tremayle, Ashley, and Huyshe families, and retains some shields and other vestiges of its ancient dignity. It had degenerated into a farm-house, but has been beautifully restored. A few miles further on was

Sidbury Church,

which Mr. Harbottle Reid described. It contains examples of all periods, Norman to Perpendicular. The tower is late Norman, but, being unsafe, it was rebuilt in 1846, but precisely as before, with its two-light belfry windows, corbel table and Perpendicular insertions. The broach spire is restored in wood, shingled. It has north and south aisles. The nave is transitional Norman. The church was restored by Mickelthwaite, and the seating erected in 1850. We were puzzled by an inscription dated 1650 on the tomb of "Henry Parson, who died in the second climacteric of his age."

After luncheon at Sidmouth, the party proceeded to

Salcombe Regis,

which Mr. Johnston described. He said the name was derived from the primitive salt works at the mouth of the Coombe, the suffix denoting that it belonged to Athelstan in the first quarter of the tenth century. The King gave it to Exeter Cathedral. There are abundant relics of a richly ornamented Norman building of about 1150, which are built in an old material in a reconstruction about a century later, when the chancel arch and north and south aisles were built. The west tower was added c. 1450. Mr. Johnston pointed out the Norman wheel-cross with pierced interstices and the rich diaper work built into the east wall of the chancel, and part of a lintel with double cable and patera on the inside of the south wall, also the panels of good early fourteenth century glass, now in the westernmost window of the north aisle. One is heraldic, and the other a good inscribed figure of a saint. In the lychgate is a bolt, said to be a "Resurrection corkscrew," left behind by a corpse-stealer.

There is only space for mention of the names of the other churches visited. These were Branscombe and Colyton. In the evening Mr. R. Hansford Worth gave a valuable lecture on "The Prehistoric Remains on Dartmoor." On the last morning (Saturday) Mr. Harbottle Reid conducted the Associates who were able to remain over the principal objects of interest in the city itself. To him and to those of the City and Shire who aided so much in investigating the antiquities of the West Country, and to those who extended their hospitality the Congress offers its most grateful thanks and warmest appreciation.

A.A. School Session, 1927-28.

Owing to the delay in the rebuilding of the A.A. premises, it has been decided to postpone the reopening of the School till Monday, October 10. The terms for this session will be as follows:—

Winter Term.—Monday, October 10, to Friday, December 16 (10 weeks).

Spring Term.—Monday, January 2, to Wednesday, March 28 (12½ weeks).

Summer Term.—Monday, April 23, to Friday, July 13 (12 weeks).

It will be seen that the rearrangement which has had to be made has only had the effect of making the Summer Term 12 weeks, and the Winter Term 10 weeks, and that the number of weeks in the school session has not been interfered with.

Ottery St. Mary.

Great Western (Plymouth) Garden Village.

In accordance with arrangements made between the Great Western Railway Company and its employees for the provision of houses on co-operative garden village lines in the various centres served by the railway, an estate at Peverel, Plymouth, was purchased by the Company and a Public Utility Society was formed for the purpose of erecting the houses. The site is a very picturesque one, on a hillside above Plymouth, and commanding wide views over the district. The layout was carefully considered in relation to the levels, and pairs of houses stepped up one side of the new road "Long Rowden" were combined on the other side with groups of four and two on subsidiary roads which follow the contours. The whole village forms a compact but generously spaced development. Special attention has been given to gardens and tree planting, the garden boundaries taking the form of hedges of various kinds.

The Railway Company has been responsible for the construction of roads and sewers, and the Society entered into a contract with Messrs. John Laing & Son, Ltd., in the autumn of 1925 for the erection of 84 houses in "Easiform" concrete. This consists of 8 in. external walls wth a continuous cavity formed between steel shuttering, the outer concrete being of gravel and the inner of clinker aggregate. There are 30 houses of the parlour type and the remaining 54 are of two non-parlour types; the former having bathroom and separate w.c.s upstairs, and the smaller houses downstairs bathrooms and w.c.s. All houses are lighted by electricity, and cooking is done by gas in the sculleries, the living rooms being provided with simple hob-grates and back boilers for hot-water supply. The windows are double-hung sashes in cased frames, and the internal doors are "Metco" Columbian pine. The roofs are covered with pantiles on felting, and the concrete walls externally are finished in roughcast and colour-washed. Bay windows and trellis porches have been provided in most of the houses, and bright colours are used for the outside painting of wood and ironwork.

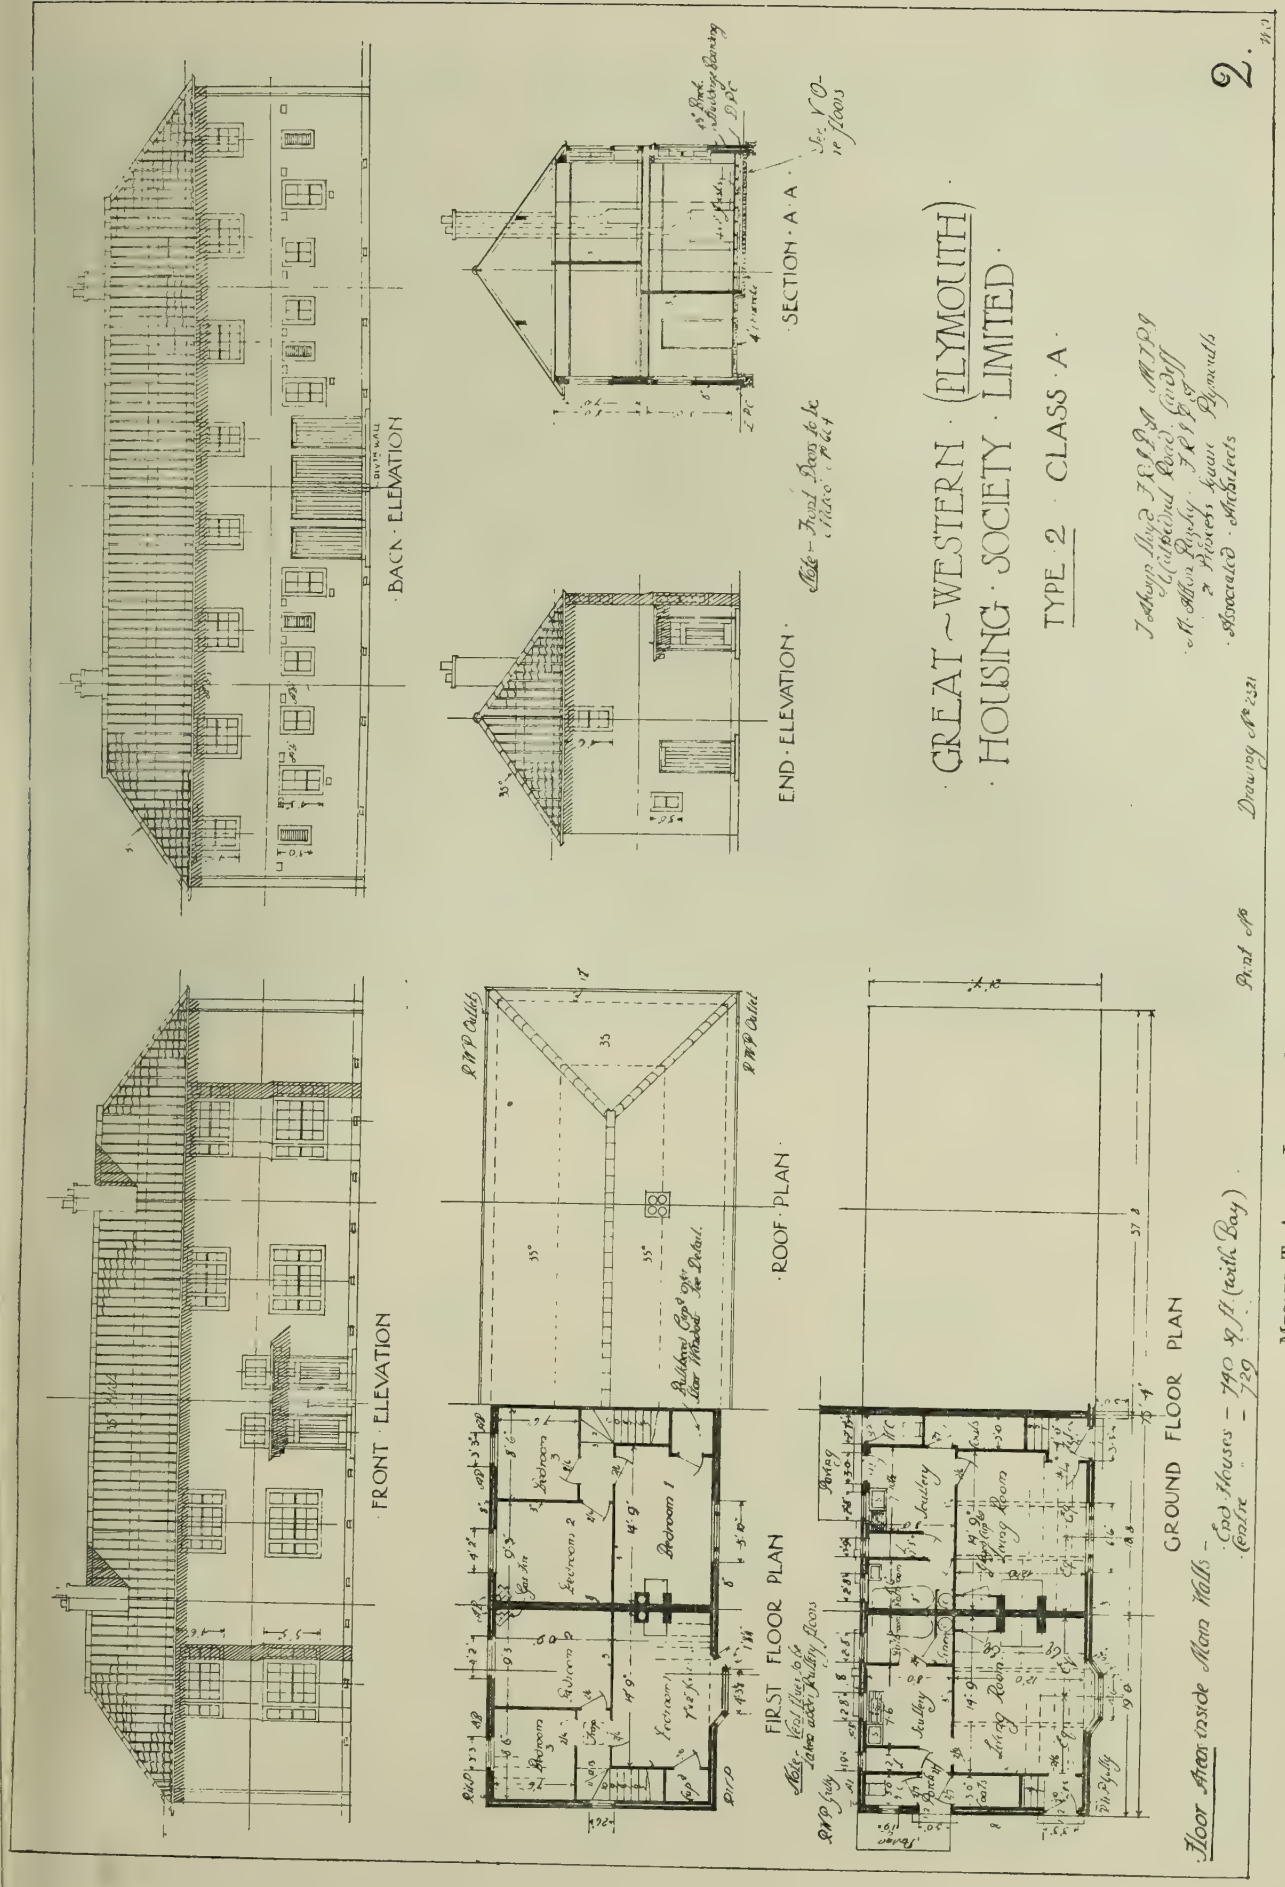
The architect who designed this village and also the other Great Western garden villages is Mr. T. Alwyn Lloyd, F.R.I.B.A. and in the supervision of the work he was associated with Mr. M. Alton Bazeley, F.R.I.B.A., of Plymouth. The contractors for the houses, roads, and sewers are Messrs. John Laing & Son, Ltd., of London, the artificial stone paving in roads having been supplied by the Pentewan Dock and Concrete Co., Ltd., and executed by Messrs. F. J. Moore, Ltd., of Plymouth.

Friends' College, Chengtu University, West China.

In Chengtu, one of the largest of the ancient walled cities of China and the capital of a province as big as France, there have recently been completed buildings for the Friends' College, West China Union University. These buildings were designed by Mr. Arnold Silcock, F.R.I.B.A., of 97, Jermyn-street, St. James's, London, S.W., who went out to China to study both the ancient architecture and modern building conditions, first at Peking, and later in West China. The architect prepared the drawings and, with a smattering of the language and the help of an interpreter, bought the materials, engaged the workmen, set out the works and supervised the erection of the buildings.

The experience, though extremely interesting, was arduous, and before the end the growing anti-foreign feeling made it impossible to get good and rapid work done. There were employed on the building about 300 workmen per day during the last months, and at one time the Bolshevist students threatened to seize the workmen and throw them in the river. Needless to say, the works automatically closed down, and no workmen turned up till the threat was withdrawn. The buildings are designed in Chinese style with Chinese materials, but the plans provide a modern college building on western lines, adapted in arrangement to the semi-tropical climate and local conditions. In digging the foundations the bed of an old river was unearthed and many earthenware figures and pots dating from the Han dynasty (206 B.C. to A.D. 220) were discovered.

The walls are of the local grey hand-made bricks, but during building operations His Excellency the Military Governor for the time being began tearing down a part of the ancient wall of the city and selling the bricks to replenish his war chest; so that it was found possible to incorporate in the buildings some of these bricks of a size about 16 in. by 11 in. by 3 in., dating from the Ming dynasty. The dressings consist of a silvery-grey stone brought from a quarry situated in the foothills of the mountain range which divides China from Thibet. Slung from stout poles, many of these blocks of stone needed a score or more of coolies to carry them.



The timber also comes from the Thibetan mountains. In the dry season the trees are felled on the steep slopes of mountain gorges and in the rainy season, when the streams are in flood, the tree trunks are floated rafts wise down hundreds of miles of stream and river to the Chengtu plain and beyond. The hardwood used was the celebrated Perse Nanmuh, which for centuries has provided the great columns and timbers of the palaces of Peking. The great amount of timber work throughout the building, both in the coffered ceilings, beams and columns internally, and the widely overhanging eaves and their supporting brackets externally, is carved and picked out in brilliant colours, on a dark brown background. Heavy tiles, closely resembling Italian tiles in appearance, but of a dark brownish grey, cover the roofs, and the great weight of the heavily timbered eaves and the up-curving hips can be imagined when it is remembered that the latter project over 6 ft. from the walls.

The main block consists of four floors and contains administrative offices grouped around the central main entrance. A side entrance in the east and west wings for students gives access to the lecture rooms, assembly hall and library on the ground floor. The staircases adjacent to each side entrance leads to the lecture rooms and large assembly hall; a common room on the first floor, and art and music studios on the second floor. In the basement are the heating chamber and store rooms, and here also are placed bathrooms and changing rooms opening directly on to the playing fields. Lavatories and motor house are separated from the main building but approached by covered ways. The complete scheme includes for the laying out a Chinese garden in the forecourt, with a gatehouse containing accommodation for the gate-keeper and servants and a garage for cars and rickshaws. The plans for this work are now being prepared. A dining-room and a dormitory block will eventually complete the scheme enclosing the east and west sides of the forecourt, and the accommodation will provide for two hundred students. The works recently completed occupied a little more than two and a half years to build, and the cost was about one hundred thousand dollars local currency. A perspective drawing of the building was given in our last issue.

(*Continued from page* 346.)

The David Lewis Epileptic Colony, Warford, Cheshire.

This new home block has been recently erected to accommodate 32 girls in four dormitories of eight beds each. The home is supplied with electricity and gas, and all drainage is led to the main sewage system of the colony proper, from which it is separated by a public road.

The architects, Messrs. Rees and Holt, FF.R.I.B.A., and Mr. G. H. Willoughby, have, under the guidance of Dr. McDougall, the resident medical superintendent, introduced many details specially to meet the needs of an epileptic institution, and the work has been under the general supervision of Mr. Preston, the Resident Clerk of Works to the Colony.

The general contractors were Messrs. L. Brown and Son, Ltd., of Wilmslow, and the following were sub-contractors :—Buckley Brick Co., Flintshire, rustic facing bricks; Messrs. Tucker, of Loughborough, roof tiles; Leeds Fireclay Co., white terra-cotta to porch verandah and glazed fireplaces; F. E. Pescod and Musgraves (Liverpool), Ltd., of Liverpool, sanitary fittings; John Stubbs and Sons, Liverpool, wall tiling; Granwood Flooring Co., Alfreton, Derby, floors to all lavatories, bath room, cloak rooms, H.M. closets, kitchen and servery; Lips, Ltd., London, ironmongery generally; Ravenhead Brick and Tile Co., St. Helens, paving to the front footpath; Saunders and Taylor, Manchester, heating and hot water installation; Wood and Co., Alderley Edge, electric light installation.

Tottenham Housing Scheme.

This scheme, which has recently been completed for the Tottenham Urban District Council, is a continuation of the existing housing estate at White Hart Lane, and comprises 104 houses of the A2, A3 and B3 types. A variety of elevation has been obtained by carefully grouping the two classes of the A and B types, and also by the introduction of two kinds of facing bricks and varying coloured roofing tiles. Triplex ranges have been fixed in all living rooms, which provide an ample supply of domestic hot water to the baths. The scheme has been carried out under the direction of Mr. H. W. Couchman, A.R.I.B.A., and the contractors for the houses were Messrs. Perry Bros., of Ealing. The roads and sewers have been constructed by Messrs. E. Knifton, Ltd., of Edmonton.

Scottish Legal Life Assurance Society's New Building, Glasgow.

We illustrate this week the winning design in this competition by Messrs. Wright & Wylie, of Glasgow. The new building is to be erected on a site in Bothwell-street.

Chapel of SS. Michael and George, St. Paul's Cathedral.

With reference to this work (the architect of which is Mr. Mervyn E. Macartney), illustrated in our last issue, we are asked to state that it is being carried out by Mr. Henry Poole, A.R.A., in conjunction with Messrs. Maides Brothers.

ENGLISH GOTHIC FOLIAGE SCULPTURE*

This attractive and compact little volume is primarily intended to help the visitor to ancient English churches and cathedrals towards a greater and more intelligent appreciation of a characteristic feature in Gothic architecture. Half the book contains a pleasantly informative and concise account of the origins and development of foliage carving, together with notes on materials and conventional ornament. The other half consists of over one hundred excellent photographs illustrating particular points. The plates selected range through work such as the Saxon trefoils at Sompting, the water-leaf and its variations, the stiff-leaved style at its best and when it "had reached a bubbling-over stage," and the exuberance of the Southwell naturalistic capitals, which, in about twenty years, gave place to the restrained and formalised pattern groups of the sixteenth century. Fonts, bench-ends, and *miserere* seats, string-courses, doorways, capitals, and spandrils, supply examples of foliage forms in wood and stone. Gothic architecture in England is defined by the author as covering the period "from 1050 to 1550, if we include Romanesque origins and Tudor survivals." Within those five hundred years foliage sculpture in England developed national characteristics and manifested a marked natural growth and development. The stiff-leaved carving, "the most perfect expression of our exclusively English Gothic foliage sculpture," found its origin rather in the conventional Anglo-Saxon than in the more classical French elements, and English foliage forms ran a course apart from, although contemporary with, parallel Continental styles of ornament. Eventually the two ceased to be altogether independent, and as the lines drew nearer and converged, strong elements from the Italian and French Renaissance merged into the English national style. But all the time it remains essentially English Gothic foliage sculpture.

The book might have been handier for reference if the list of illustrations, with brief indication of points to be noted, had been place in closer proximity with the photographs to which it alludes; but the reader, whether amateur, student or scholar, will find this a minor inconvenience in a valuable little book, possessing the somewhat rare merit of keeping strictly, but by no means dully, within the limits of its title.

PARTHENON STUDIES.

By W. R. LETHABY.

VII.—THE FRIEZE.

ubject.—The beauty, dignity, vitality and hm of the long band of sculpture which ounded the cella, the freshness and et naturalness of the imagination, the , equal mastery of the workmanship may be told in words. "A troop of handsome hs on horseback, their short tunics flying he breeze, came bounding round the ble in procession, followed by beautiful en whose flowing drapery gave more deli- lines to a scene which seems an embodi- t of healthy life in the brightest and most us aspect." "Among the figures and ps we will not attempt to choose, for all equally large, noble, natural, and yet un- cious in their momentary gestures." such observations of life should touch nd establish intimacy across the gulf of is one of the wonders of great art. The k vision of the artist for expressive ns should be remarked by the spectator, hey were recorded, of course, for recog- n. The mounted men and horses are ruthfully done that a riding master was rn by his admiration to produce an ex- nt book on the frieze. Some of the riders a hand in the attitude of a dancer, sug- ng a sort of rapture in exquisite balance. horse in the preparing group lowers its and rubs his nose on a foreleg. An ox s to run, jerking the man who leads it, one or two throw up their noses to bellow. maidens trip along rhythmically, citizens erse, gods watch intently. The troop of emen are amazingly true, and whenever cattle go by I am reminded of the legs ie carved horses. As Dr. Murray re- ed: "Thoughts arise when we look on nimals being led to sacrifice, and we feel that the sculptor meant to waken ghts of that kind."

vish some effort might be made to bring ven more fully than has been done the y of this supreme work. A way of pub- on might be found which, by giving the al arrangement at a small scale, and ing the completer parts for larger re- l versions, would adequately suggest the ial character of the sculpture. A short iptive tract concentrating on the more tant facts which a visitor to the Museum hope to understand at one reading, and all, directing attention to the grace poetry of this wonderful "musical " (to adopt a phrase from Sir Walford s) would be helpful. The thing is but we don't get enough value from it. it to the festival frieze should itself be ival.

subject of the sculpture was the pro- n to the Parthenon in honour of Athena, uardian goddess of Athens. "The l was originally annual; it was not he middle of the sixth century that a splendid celebration every four years ppointed." At this greater festival a peplos, a woven garment for the old of the goddess, was brought to the ois. The original and essential cere- was the celebration of the birthday of ddess Athena. A sculptured band or was characteristic of Ionic art, and in c temple it was an innovation. The idea of the subject was also Oriental study of the temple of Artemis at s I was able to show that sculptures nting the birthday procession of that adorned both the fourth- and the ntury temples (*Hellenic Journal*). nur Evans has lately brought out the at a great processional painting at represented a similar sacred pro- —doubtless also held on the birthday mother goddess, from whom Athena emis in many ways must have de- In a series of Hittite sculptures at uch a procession was also recorded. part of this sacred objects were car- ried, while in another acrobats performed. I mention this because one of the incidents carved on the Parthenon frieze is the jumping down of *apobates* from chariots in motion, and I suppose an amusement or "carnival" element was likely to be included in all these festival processions. Some fragments of relief sculpture from the earlier Parthenon exist, and on these also a procession was represented.

The procession sculptured on the Parthenon frieze began at the west front, passed along the two flanks of the temple, and was received by twelve gods at the East front. According to Lechat, there are about 360 figures in the frieze, irrespective of the gods; it must have been told that there were as many as the days in the year, and I wonder if that was intentional. The general arrangement of the sculptures on the cella walls may be represented thus—

Seats were actually set out at the festival to invite the gods and to indicate their presence. On the east front the gods are represented in two main groups, broken up more or less in conversing pairs. They have assembled joyfully in all the bustling good will of a birthday party, and they talk among themselves. Zeus leans easily back and lets his sceptre lie on his arm (Fig. 1). Hera turns to him with a radiant smile, raising her veil and showing the garland or diadem on her head; Athena herself, a fresh young girl, talks with the smith-god Hephaestos. Hermes, Dionysos and Ares (Mars) rest—indeed, loll—in attitudes of ease; Apollo wore a festival garland, and possibly held in his raised hand a sprig of laurel, as suggested by Furtwängler. Aphrodite points out the approaching procession to the young Eros. The friendly, intimate spirit of it all is expressed clearly and certainly, all is serious gaiety, it is Athena's birthday celebration and sacrificial banquet. As Lechat says of the whole frieze: "However admirable may be certain figures or groups, their beauty is only secondary to that of the entire cortège. For this procession, as interpreted by Pheidias, has become an exaltation, a triumph. It is Athens itself which is displayed in a sort of ideal mirror. Pericles certainly approved and admired this frieze, his magnificent eulogy of his country was here already expressed in a language not less powerful than his own."

East Front.—The gods are divided into two groups by an intervening central scene, and beyond the gods, both to the right and the left, knots of spectators are gathered. The composition of the sculptures filling the east front of the cella above the great entrance may be suggested thus:—

E	C	A	+	B	D	F
Head of Procession	Group of Citizens	6 5 4 3 2 1 SIX GODS	Priestess & helpers	1 2 3 4 5 6 S.X GODS	Group of Citizens	Head of Procession

The gods are seated looking away from the centre, right and left. Two pairs nearest the middle—1, 2, A, and 1, 2, B—are somewhat separated from the others, and seem of greater importance. These are Zeus and Hera in the left-hand group (Fig. 1), and Athena with Hephaestos on the right of the centre.

The central scene represents some ceremony of the occasion, but exactly what is not generally agreed. There are two tall figures, a woman and a man, also two maidens and a boy. At first one is disposed to think of the woman and man as in the middle, but when looked at from a little distance it is quite clear that the woman was actually in the centre and that the man and boy form a balancing pair to the two maidens on the other side of the woman. "The whole work centres in the one woman, who is almost without question the priestess of Athena" (Davidson on the Frieze, 1882). This central slab, and the groups of gods on either side, are arranged in this order:—

HERMES
DIONYSOS
DEMETER
ARES
Iris
HERA
ZEUS
Two maids
Priestess
Man & boy
ATHENA
HEPHAESTOS
POSEIDON
APOLLO
ARTEMIS?
APHRODITE
Eros

The priestess turns to the two maidens helping them with seats which they carry.

FIG. 1

The man gives the boy, or receives from him, a piece of folded cloth, which is most usually thought to be the new peplos.

The theory of explanation suggested in the Museum publications is that the gods were imagined as seated in a curve, while the priestess and her companions were in front of them, thus (⁂. It is at once evident, however, that there were two groups of gods, who turn their backs on the central scene, and, ignoring it utterly, look outwards towards the advancing procession. If the seats for the gods were set out in the protico in two groups, one on either side of the great door, while the central action took place within the temple, that would explain the facts.

In a passage of Lucian, quoted in Miss Jane Harrison's *Athens*, Philosophy says: "Now I suppose we had better decide the cause here in the pronaos of the Polias. Let the priestess set seats, and meanwhile we will go in and pay our devotions to the goddess." At the Temple of Rhamnus there were two marble seats in the pronaos of the temple on either side of the entrance door, inscribed to Nemesis and Themis. It was a custom, therefore, for the priestess of the Parthenon to set out seats, and in some instances seats for gods were in the portico. The symbolism of the prepared throne passed into the Christian church.

Now the central scene of the frieze, with the figures of the priestess and her helpers, is exactly over the great doorway, as may best be seen in Lucas's excellent model in the Museum. If we suppose it to represent some action within the temple, that would explain why the two groups of gods should have their backs to it, as seems to be insisted on in the sculpture. The arrangement, as imagined in the sculpture, seems to be this—

GODS Citizens

Man & boy
PRIESTESS door PROCESSION
Maidens

GODS Citizens

The figures of the central group of the priestess and her companions seem small, not only as compared with the gods, but in relation to the citizens beyond. This may have been intentional, as suggesting remoteness. I think it probable that this central part was divided off from the rest of the frieze by having a different background colour.

According to Furtwängler's reading, both the peplos and the seats for the gods had been brought forward into the temple from the head of the procession. He suggested that the looking back of the second seat bearer indicated that others were to follow. I would rather suppose that what was represented was the sending of seats out to the portico. In any case, he makes it clear that the bringing of seats was a regular incident in welcoming guests.

The piece of cloth was almost certainly the peplos, for a similar piece of folded cloth seems to have been carved on Metope XX of the south side in a representation of the first institution of the peplos ceremony. It seems impossible that a similar piece of folded cloth would be carved twice over if it were not the sacred peplos.

Visconti, a century ago, said of the central group: "We see on the left a priestess, probably the queen or the wife of the reigning Archon. . . . On the right is, perhaps, the reigning Archon. This Archon (*Basileus*, King) had the superintendence of the processions and sacrifices.' Dr. A. B. Cook has recently brought forward an explanation which seems an expansion of this reading. "The central slab represents a ritual apotheosis. The 'King' and 'Queen' of Athens receive from their attendants the sacred peplos and diphroi" (*Zeus*, Vol. II). I am not qualified to discuss this, but I cannot think that the priestess and the man form a central pair, so that the woman may be said to be on the left. The woman is central, and the man is therefore a subordinate figure. Now Visconti also said of the woman: "We might recognise in this figure one of the two principal priestesses who was called *Cosmo*, a name derived from the arrangement of the sacred articles entrusted to her care." This, if otherwise tenable, would suit the central composition perfectly.

The central slab of the east frieze, which we have been discussing, is injured in a special way; although it is complete in regard to composition, the smaller details are obliterated. While the temple was used as a church the sculptures do not seem to have suffered violence, but the central slab was removed when the apse of the church was built and inserted in the wall of the Acropolis. Here, being within reach, it received petty injuries, and it now looks as if it had been walked over for a long time. The fullest possible understanding of the several figures can only be gained by long study.

The Priestess in the centre, a tall and dignified figure, was draped in a mantle over her under-garment, a sleeved chiton. This mantle was caught under the left arm, carried across the front, at waist height, passing under right arm and around back it was thrown over the left shoulder, where it hung down to the waist; pressure by the left arm and elbow against the side kept it in place. This figure is in pose, gesture, character and costume extraordinarily like one of the goddesses of the celebrated Eleusis relief, which is generally accepted as being by the master of the Parthenon sculptures. Even the hair seems to have been arranged in the same way. Owing to the injured surface of the Parthenon slab, the draping is hard to follow, and I do not know that the resemblance to the figure of the Eleusis relief has been observed. (I see that Dr. Cook, in his excellent restoration of the frieze subject, has noticed the draping of mantle.)

There are other resemblances between the Eleusis relief and the Parthenon sculptures, and that the relief was by the master who designed the frieze is as sure as any result of style criticism may be.

One of the maidens who carried the seats also held a smaller object. This is said to be "unexplained" in the *Guide*; but Petersen, long ago, noticed that it was a footstool, and Furtwängler agreed. There may be no doubt, from the paw-like profile of what remains, that it was a stool (Fig. 1, right side).

On either side of the central group are pairs of the seated gods. To the left, the god nearest the centre is Zeus and the corresponding figure on the right is Athena. She held a long spear of bronze, passing diagonally by her shoulder. The right hand of Zeus falls lightly on what is a part of his sceptre that was carved on the marble. A drilled hole below the hand shows that it was continued downwards in bronze, while above it must have been completed in paint (Fig. 1). Hawkins, in *Museum Marbles*, 1830, had observed of the sceptre: "The upper part passed behind his body, and there can be little doubt that the top appeared behind the head . . . another evidence that colour must have been used to give the same appearance to all parts of the sceptre." (A similar instance is noted in the Guide-books. The Figure 22 west "holds a wand, or whip, which is expressed in marble, prolonged in bronze at each end, as shown by the rivet holes in the original marble.") The sceptre of Zeus and the spear of Athena would have made long diagonal lines balancing one another on either side of the centre. There were several strong lines of the same kind made by the attributes of the other gods. One of the left-hand group, Demeter, carries a great torch, which is exactly like a torch represented on the relief from Eleusis. On the frieze, part of it was undercut, it was inclined at an angle nearly parallel to the sceptre of Zeus. Ares, also on the left, had a spear, of which only a part of the bottom end of the shaft remains in the carved marble; below the heel of the figure it was probably undercut, while the upper portion must have been completed in painting. Hermes had a bronze wand. This series of emphatic slanting lines on the left required balancing on the other side of the centre, and we may with confidence infer that, in addition to the spear of Athena, Poseidon had his trident; his hand, indeed, is in the pose of holding a shaft.

The umbrella carried by Eros forms a part of this scheme of slanting lines / / / \ \ \ which must have had much importance in the composition in binding the whole scheme into one. That Zeus had a long rod sceptre, possibly with an eagle as its termination, is confirmed by many vase paintings. The attitude of Ares, resting his foot against his shaft, also appears on vase paintings Gerard's *Greek Painting*, 174; also two in the British Museum, E.56 and E.79). attitude derives from a painting Polygnotos, who represented Hector s became a regular pose for a resting wa possibly some of the vases derived the at from the frieze itself.

The figure of Zeus, including the he fortunately well preserved. Hera turn him, and her full face can be traced confidence. On her neck were little cr like those on the neck of the great A of the west gable. Her arms have a vellous look of softness. (For the head, pare Plate V, in the Burlington Club logue of Greek Sculpture; Gonze, *Reliefs*, Taf. CCLXI; and Furtwän Vases, Plates 69 and 70.) Dr. Murray of her lifted veil: "Her action in pull aside means, no doubt, that she is tak lively interest in what is transpiring." the contrary, she is the only one turning from the scene, and her lively interest Zeus. I mention this because the same is repeated in a beautiful metope of Zeu Hera found at Selinus. In this relief, is standing, but she lifts her veil and re Zeus in the same way. These Selinus show other correspondences with the thenon, and I wonder whether they wer imported from Athens.

Nearly twenty years since I made a re tion of the head and hands of Athena (*Buildings*). Enough remains to show she was very girlish and gay. "It i possible to conceive anything more per lovely," wrote Hawkins about a century Her left hand played with a little bro snakes. Dr. Cook makes it her ægis, this is nearly the only point I can fi differ from in his excellent restoration o central slab of the frieze.

Injured as the head of Athena is, remains enough of the profile, with t of the hair and eye, to indicate that it, indeed the whole body, was very simil type to a statue of Athena known in c which Furtwängler identified with the " nian," a celebrated work of Pheidias. speaks of the Lemnian as having "short combed up at the back, wavy and curly tied with a fillet," and this applies eq to the Athena of the frieze. Fig. 2 rough tracing from profile of the sup Lemnian; if it is pared with the g head of the godde the frieze it will be that the resemblan very close indeed.

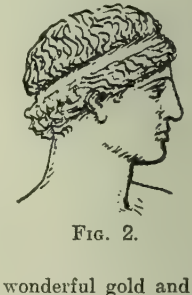

FIG. 2.

Athena is en in earnest conver with Hephaestos, co-crafts god in A The talk must be —probably of the thenon itself an wonderful gold and ivory statue within the basis of this great image she Hephaestos were again represented tog They were there arraying Pandora, th of mortals, with gifts of their own wo The thought was the "revelation weaving and metalwork to mankind. of Athens was the worker. Statues of and Hephaestos were set up together temple of the latter (wrongly known Theseum) in the lower town.

THE LONDON BUILDING ACTS AND THEIR APPLICATION—XXVI.

By H. V. MILNES EMERSON, A.R.I.B.A.

Part XII.—This part of the Act, Sections 25 to 135, inclusive, deals with sky signs. ny word, letter, model, sign, or other evice in the nature of an advertisement hich shall be visible against the sky from ıy point in any street or public way, be- mes a sky sign, and is prohibited. A ard, however, can be erected upon a para- t or ridge of a building, providing it is one continuous face and not openwork, d does not exceed 3 ft. high. A series boards, visible against the sky from the reet, although the letters were attached to e face of the boards, and therefore not sible against the sky line, has been held be a sky sign (L.C.C. *v.* Savoy Hotel . 60 J.P. 547).

Part XIII.—Superintending Architect and strict Surveyors. Sections 136 and 137 al with the appointment of the superin- nding architect to the council, etc.

Section 138.—Subject to the provisions of is Act and to the exemptions in this Act entioned, every building or structure and ery work done to or upon any building or ructure, and all matters relating to the dth and direction of streets, the general ıe of buildings in streets, the provision of en spaces about buildings, and the height buildings, shall be subject to the super- sion of the district surveyor appointed to e district in which the building or struc- re is situate.

Note.—The buildings and structures that e exempted are given in Sections 201 to 6. The district surveyor deals with all uctural work, etc., as provided for in this t, which includes all structural alterations repairs to buildings, but painting or corations or non-structural repairs to build- gs do not come under his direction.

Sections 139-144.—The L.C.C. appoint the trict surveyors as vacancies occur, and they ve also the power to suspend or dismiss district surveyor, and also to make any eration of the boundaries of a district.

A district surveyor must, before appoint- nt, have passed the requisite examina- n held by the R.I.B.A. After passing examination the candidate has to wait il a vacancy occurs, and will then apply the position in competition with other didates. The L.C.C. appear to give ference to those who have served in a rict surveyor's office. A list of those who e passed the district surveyor's examina- , with dates, is given in the R.I.B.A. endar. Candidates for the position of rict surveyor must not exceed 50 years ge. The district surveyor must main- an office at his own expense and must engage in private practice.

ction 145.—Under this section it is ssary to give to the district sur- or two days' notice before com- cing any building or structure, and fter the commencement of the building ations they are suspended for any period eding three months, two days' notice t be given before work is resumed. A ge of builders on any building also re- es two days' notice before the new der commences operations. Printed e forms can be obtained from the dis- surveyor, and such notice under this must state the situation, area, height, er of stories and intended use of the ture or building, the number of build- or structures if more than one, the par- rs of the proposed work, the name and ss of the person giving the notice, the of the owner.

the case of emergency, where the work quired to be done immediately, such may be commenced or done, provided notice thereof is given to the district or within 24 hours after the com- ment of same (Section 149).

If any building is erected or work done without due notice being given to the district surveyor, he can, within one calendar month after discovering same, enter the premises for the purpose of seeing that the provisions of this Act, or any notice served or order made under same, have been complied with, and the time during which the district surveyor may take any proceedings, etc., as authorised by this Act shall date from the time he discovered that such building had been erected or work done.

When giving building notice to the district surveyor the person signing the form becomes liable to pay the district surveyor's fees, unless he states that he is acting for and on behalf of the owner.

Plans have to be furnished to the district surveyor under certain applications, but it is advisable to furnish the district surveyor with a copy of the plans of all work proposed to be done, as he can then advise beforehand if there is any irregularity in the proposed building or structure.

Structure or work does not include temporary seating, comprising tiers of movable wooden platforms within a building (Venner *v.* McDonnell, 1897, 76 L.T. 152), or a temporary wooden floor over a swimming bath, converting same into a concert hall (Handover *v.* Meeson, 67 J.P. 313), but external stands, which involve questions of frontage line or dangerous structures, require notice to the district surveyor.

Plans can be delivered after the notice, if necessary, and if disapproved by the Council, can be made a subject-matter of appeal (L.C.C. *v.* Spink, 1908, 2 K.B. 447).

Sections 146 to 149.—These sections deal with the duties of the district surveyor in enforcing execution of this Act.

Section 150.—Under this section the district surveyor is to serve notice upon the builder objection to the proposed work detailed upon the building notice, if such proposed work is in contravention of this Act, but the absence of any objection by the district surveyor does not prevent proceedings being taken where there is irregularity under Section 151 (Coggin *v.* Duff), 96 L.T. 670).

Section 151 allows the district surveyor to serve notice upon the builder relating to any irregularity during the construction of the building and calling upon him to amend within 48 hours any such irregularity.

Section 152.—This section provides for the service of notice of irregularity after completion of the building, and the district surveyor has power to serve such notice upon the owner within 14 days after notification that such building has ceased to be in the charge or control of the builder; in the absence of any notice served upon the district surveyor he can serve a notice of irregularity upon the owner, occupier, or other person concerned within 21 days after completion of the building. It has been held that a builder who has given up possession of the building before any irregularity arose is not liable (Reg *v.* Brown, 45 J.P. 220), but it is provided that nothing in this Section shall prejudice any remedy of an owner, occupier, or other person against the builder.

Section 153.—(1) If the person on whom the notice of irregularity is served makes default in complying with that notice within the period named therein, a Petty Sessional Court, on complaint made in a summary manner, as provided by the Summary Jurisdiction Acts, by the district surveyor, may make an order on such person, requiring him to comply with the notice, or with any requisitions therein which may, in the opinion of the Court, be authorised by this Act, within a time to be named in the order.

It has been held that an appeal against such order does not lie to Quarter Sessions (Reg *v.* Middlesex JJ., 9 Q.B.D. 31). A case may be stated for the opinion of the K.B.D. of the High Court of Justice under the Summary Jurisdiction Act, 1879.

(2) This sub-section provides for the Council, if the order is not carried out and after giving 7 clear days' notice, to enter upon the premises, carry out the work, and recover all expenses in connection therewith from the person on whom the order was made or from the owner of the premises.

LONDON IN 1842*

Architecturally, London is in the melting-pot to-day, and it is good to see what it looked like through the discerning eye of that clever architectural artist, Thomas Shotter Boys—to see it as he saw it in the first half decade of the much-maligned Victorian era. In 1842 the real Victorians were in short frocks and swaddling clothes, and their parents had scarcely discarded their Georgian garments. How very familiar some of the scenes appear, even to-day. Take, for instance, Plate No. 1, "The Mansion House," looking up the Poultry to Bow Church. It is quite recognisable to the Cockney who knew it in the "'eighties." Of course, the houses on the right-hand side of the Poultry have been rebuilt more than once since then, but the lay-out is much the same. There is a delightful sedateness in the old-time traffic with the vintner's lorry, the sixpenny coach, the ladies with flowing skirts, and the nice little girl who is giving a penny to the crossing-sweeper with the very bald head and two wooden legs. Boys was an artist with a happy felicity, not always found in architectural artists of the period, of putting the real human element into his street scenes; he gives us the wheel traffic—coaches, carts, cabs, lorries, barrows—the road-menders, artisans, tradesmen, beggars, chestnut-sellers, menservants, maidservants, and the "people of quality," each and every one pursuing the even tenor of his and her way. The whole forms a perfect microcosm of London in the "'forties." More often than not, somewhere in the picture we shall find the artist's name or his initials, J. S. B., as a part of the design, either on a street corner, as a shop sign, or on a baker's basket.

The value of these views lies largely in the fact that they represent one distinct and short period—five years from the time he started his sketches to the date of publication in the form of lithographs—1837-1842. The original large folio volume included notes by Charles Ollier; but these notes Mr. Chancellor considers out of date, and whilst making judicious use of them he has appended to each view about a page and a half of interesting explanatory text. The introductory chapter gives us an adequate life of the artist and an appreciation of his works.

Lithography has recently come into its own, and Thomas Shotter Boys' lithographic views are eagerly sought by print collectors. The original volume of 1842, published at £2 2s., Mr. Chancellor says, has a value amongst collectors to-day of from £35 to £45 if uncoloured, and double that if coloured—and we must beware of fakes.

The original vignette title, included in the volume, shows the doorway of the Temple Church seen from the south-west in full sunlight, which lights up the carved details on the archway leading into the church. Two urchins are idling in the angle between the archway and the rotunda, whilst a third is just finishing a scrawled inscription on the wall beneath the narrow Norman window: "London as it is, Drawn by Thos. Shotter Boys, 90, Great Portland ——" the hand with the charcoal is poised for the completion —"street."

Apart from their decided architectural value, the delightful intimacy of these views appeal to us; and if it is beyond our means or opportunity to acquire the original lithographs, this quite charming book of reproductions comes as a happy consolation.

* "Original Views of London by Thomas Shotter Boys, 1842." With descriptive notes by E. Beresford Chancellor, M.A., F.S.A. 9, Queen Anne's-gate, S.W.1. £1 10s. net.

ARCHITECTS' & BUILDERS' INQUIRY BUREAU

We are glad to give questions and answers, but cannot accept responsibility for contributed replies, especially on legal matters.

May we appeal to our correspondents to submit their queries on paper of a size easily filed, and written as legibly as possible, or, better still, in typewriting?—Ed.

Hanging Church Bells.

Sir,—Could you give me any information regarding the principle affecting the hanging of bells in a church tower—particularly whether the framing supporting the bells should be built in or should be free, etc.? Is there any treatise on the subject?

H. B.

Dampcourse.

[Reply to "Architect," August 19.]

Sir,—As a general rule it will be found that damp does not become absorbed out of damp ground up a vertical wall more than three feet, so that it is only necessary to render the face of the wall waterproof for a height of three feet to ensure that surface damp is not drawn into the house. In addition to this the surface concrete should be rendered waterproof in the same way, and the surfaces being all fairly accessible, the operation becomes far less difficult than cutting in and inserting a damp course in short lengths at a time.

Restoration.

[Reply to "Circulation," August 26.]

Sir,—The method referred to by "Circulation" is fully described in the "Journal of the Royal Sanitary Institute," December, 1910, vol. XXXI, No. 11, by Mr. H. D. Searles-Wood, F.R.I.B.A. It is known as the Knapen process.

F. Thackeray, A.M.Inst.C.E.,
Borough Architect.
Merthyr Tydfil.

Sir,—What is considered to be the best form of dampcourse for use on a modern building? Are there any records as to the condition in which bitumen sheeting types of dampcourse have been found to remain after having been built in for a number of years? There is no doubt that this form of damp course is the easiest to lay and the cheapest to obtain relatively, but it would be comforting to know that it has something approaching an everlasting nature.

Modern.

Dowelled Doors.

[Reply to "Conservative," August 19.]

Sir,—Although a conservative myself as far as building method goes, I have become converted to the best-class dowelled door. The dowelling being all done by machinery, it can be made to fit absolutely and truly, whereas how many of the shoulders of a hand-made door are there that do not have to be tinkered about with the wedge before absolutely true? I am also convinced that there is far less likelihood of the dowelled door dropping after a time, owing to the mathematical accuracy with which it has been made.

Another Conservative.

"Stoothing."

[Reply to "Query," August 19.]

Sir,—The provincial word "stoothing" is a very interesting old word. Originally as used in the provinces it did not mean studding as for plaster partitions; it meant firring or battening to receive plaster laths. The old oak used in half-timbered work was cut with the aid of an adze out of small grown stuff for the lighter timbers, and often they were not very straight, and sometimes even if they were straight they cast in seasoning, with the result that the walls were out of plumb. To overcome this, and also to afford a better key for the plaster where carried over brick nogging and studs in half-timbered work, the work was firred out with strips of wood like slating battens and then lathed, and this was known as "stoothing."

One would have expected the word stoothing to go out of use when this method of construction was no longer employed. It survived, however, and came to mean for the provincial joiner the studding as in lath and plaster partitions. It is found in many parts of England, particularly Yorkshire, and is also sometimes used in North Wales.

J. R. T.

English Oak.

[Reply to "Honour and Arms," August 19.]

Sir,—I think your correspondent extremely unfair. His argument seems to be based upon a sort of "Big fleas have little fleas, etc.," logic, which quite falls to the ground when the relative positions of architect, builder, merchant, importer and grower, etc., are fully appreciated. The architect has to deal at times with builders of whose capabilities and integrity he has no knowledge. Now, your correspondent knows perfectly well that it is impossible to judge some timber without a knowledge of its history, and in such cases he is at the mercy of the builder. "So is the builder at the mercy of the timber merchant," says H. and A., which is quite true. The cases are, however, wide apart, for the builder as a tradesman is at liberty to deal with whom he will, and if he has not the sense to deal with the firm he knows will give him a square deal, he deserves what may come to him. Hence the need for a stringent and waterproof specification.

Sense.

Dadoes for Cinemas and Theatres.

Sir,—What is the most modern treatment of dadoes in cinemas and theatres? We require something which will stand hard usage. We should be greatly obliged by information as to up-to-date practice.

J. P.

Composition Floor.

Sir,—Can anyone suggest some substance to penetrate, and form an impervious surface on, a composition floor (poor imitation of Doloment), which exudes dampness, but has to be constantly used by an office staff? The chances are that the underlying concrete is also poor quality.

Mersea.

Overhanging Barge Board: Question of Infringement.

Sir,—The first part of "Law's" reply to my question is clear and applicable to the case mentioned. The second part seems to me superfluous. If both tenants of a party wall raise their houses together, they would each pay equal shares of the cost of raising the party wall. If only one wished to do so he would divide the party wall by carrying up what he considered his share. Having divided the party wall himself he could not then claim the right to put a barge board overhanging his neighbour's roof, and the division would be as divided if agreeable to the other party.

Ajax.

Extras.

Sir,—What is the legal aspect in the case of a house where a plan and approximate quantities were given to the builder and the owner is charged with a large bill of extras? (1) Can I be charged with work shown on plan and not given in quantities? (2) Should not the builder have checked the quantities with the plan and notified me if they were insufficient? (3) Are not the quantities to be viewed as a schedule for any extra work that may be ordered as the job proceeds, over and above what is shown on the plan; in fact, is not the plan binding on the builder irrespective of the approximate quantities?

Enquirer.

BOOK REVIEWS

The Modern English House. (London Country Life, Ltd.) 21s. net.

This volume contains a collection of photographs and plans of houses of all sorts. The introduction, by Mr. R. Randal Phillip gives a summary of the main points to borne in mind by prospective house-builder Many of the illustrations are old favourite and no doubt the author had this point mind when explaining the term "modern as applied to house-building. A satisfacto method would have been to attach the da of the building to each illustration. Th notes accompanying the illustrations are pa ticularly helpful in explaining the "pecu liar" house obviously built to satisfy unusu conditions. In the introduction a good poi is made of the problem of designing a hous to suit average requirements in the event its passing into other hands. The questio whether one room should serve two purpos —as a dining-room and a sitting-room— fundamentally a social problem affecting th planning of a house. The same may be sa of what is termed the servant problem. Th examples of English country houses are, the whole, well chosen and illustrated, a the book ought to be of interest and value many.

The Charm of Old Surrey. By H. M. Alde man. (London: Henry J. Drane.) 2 pages; 199 illustrations. 7s. 6d. net.

The author of this book is his own illu trator, and if this is his first venture in boo making he has our congratulations. We a given to understand that he is a journeym carpenter; and that being so, the craft ma well be proud of its member, who has spe his week ends in tramping the highways a byways of Surrey making delightful sketch of the hundred-and-one little things that not ordinarily find their way into popul handbooks and county guides. He has t sense of the woodworker for the fine co structional points in old Church porche doors, roof timberings, tower framings, fo covers, bench ends and mediæval coffers, a he gives us the very spirit of the o workers in his vigorous strokes delineati the cottages, inns, barns, wind- and wat mills, bridges, and village churches. H text is a running commentary, in home English, on all these things, and he sho diligence in his historical researches. Ve little seems to have escaped the author's e and pencil in the twelve villages which thinks are Surrey's prettiest and best. can but hope that he will tramp anoth county with equal pleasure to himself a profit to his readers.

English Architecture in a Country Villa By Arthur H. Plaisted. (Longma Green & Co. 8vo, 42 pp., 2s. net.)

A considerable number of incumbe throughout the country have written mo graphs on their own parishes and pari churches, thus rendering considerable serv to the country at large in helping to fost a strong local love and intelligent interest the countryside; each one doing in a sma but none the less effective, way what Royal Commission on National Monume is doing officially for the country at lar The author has taken a rather unusual cour he is apparently an archæologist at heart a has done considerably more in the space 43 pages, which includes an excellent ind than write a mere history of his Buckingha shire parish, the church and Medmenh Abbey. He has taken the materials at ha and on them and round about them woven a quite interesting and concise hist of English architecture as we may find it hundreds of country parishes. Quite ap from the author's clear and concise disse tion upon architecture generally, and purely local archæology of that corner of Chilterns, the illustrations, signed by L Thomson, are worthy of commendation.

THE BUILDING TRADE

HORING DURING BUILDING OPERATIONS

By F.I.O.B.

In view of the recent discussions in the ublic Press as to who is the responsible party the event of the whole or any part of a ilding collapsing during the course of erations, it may be of general interest to nsider some of the questions involved. hese notes have nothing whatever to do ith the particular incidents which have been fore the public during the last few months, t are rather an attempt to disclose some ounds for the due consideration of an im- rtant subject.

The responsibility for damage in the main ill be determined by the terms of the con- act, which must be considered together ith the facts of the case. It may be as ell at the present moment to avoid reference any method which may be adopted to certain the facts in an attempt to appor- on the liability in any case where a dis- ter has happened; but there is no doubt at the whole subject of shoring, upholding, nd maintaining buildings and structures ring the course of building operations ould be carefully considered with a view bringing to light the responsibilities of e various parties concerned. Shoring and bility, therefore, are usually highly tech- cal questions which can only be settled by rsons of great experience and may need course to some legal tribunal.

It is commonly supposed that if the archi- ct has included in his specification and antities a clause such as "Provide all cessary shoring and strutting" that he has lequately transferred the burden of re- onsibility to the shoulders of the builder r anything which may happen to the fabric the property in question or even the ad- ining premises. The term "necessary shor- g and strutting" is a common one, used in neral building operations, and does not equately convey all the work which may necessary to be done under this heading it may include the minor shoring and utting necessary in the erection of every w building, or it may be assumed to in- de the important shoring, strutting, and eral safeguarding works necessary to ure the surrounding property adjacent to building operations. Such a clause as ficated above would be a trivial description any important works were contemplated, might very well be taken to indicate that architect did not anticipate any serious ring work would be required. It is some- es considered by frugal folk that if the ing requirements (which in the early es of the scheme may be only proble- ical) were elaborately described in the ntities or specification, the builder would down a comparatively large sum of ey for what may turn out to be a very ll piece of work, but there are ways of ing with that improper point of view.

here is no doubt that responsible firms of ders would prefer a definite statement of t work is actually required to be done in erence to some loose phraseology which t or might not mean anything. If the fication of the proposed works is to be ny value to the persons concerned, the ng and strutting should be specifically ioned. No one would dream of specify- he constructional steelwork in general es such as "The builder to provide all sary steel stanchions"; for it is custo- and usual for such important work to early set out in the documents; there- where the shoring, strutting, and simi- orks are an important item, they should refully specified.

is customary and usual in important ng operations for the strains, stresses, afe loads, and such important data to culated by the architect or a civil engi- specially employed for this work, and not left to the builder, who is only paid as a tradesman, and not as a mathematician; and it is obviously unfair to leave important shoring work to be performed by the builder's foreman—who, as a rule, has no training in the calculation of stresses and strains — to deal with the extent and dimensions of safeguarding measures which may be disclosed in works of intricate character.

In all cases where considerable risk is involved it is essential for the architect or the engineer specially to describe or detail the shoring works required for the proposed operations. Some architects already do this, and if they have not the necessary data to describe the shoring in the specifications, deal with the matter by including as a "provision" a certain number of "cubic feet of fir timber fixed complete in shoring," and when the job arrives at a position when shoring is required, the contractor is instructed where to place the shores or the necessary struts. If this method is adopted, then all parties concerned have the matter definitely brought to their notice, and if the builder in such a case has not carried out the instructions given to him, or has performed them in a negligent manner, the builder may be liable if any damage occurs. On the other hand, if the shoring which he is instructed to erect were done in a proper workmanlike manner, and through some unforeseen cause an accident happened, it is possible that the builder would not be liable, as, having contracted to carry out the work in accordance with the architect's instructions, these, if satisfactorily performed, might release him from the onus of responsibility for any damage which might occur.

In cases of considerable complexity such as would be indicated by the architect deeming it necessary to detail the shoring required, an additional safeguard could be adopted of insuring the premises involved against risk of damage during operations, and a sum could be included in the contract for this purpose. The possibility of the presence of latent defects in surrounding buildings may complicate the question of liability. The party wall, built many years ago of old or "place" bricks with lime mortar, the strength of which has considerably deteriorated, is often found to be a structure which requires careful shoring. The adjoining part-owner of a decayed party wall sometimes tries to get it rebuilt free of expense to himself, whilst the building owner who is commencing operations is unwilling to go to this expense, and the negotiations usually result in the defective party wall being repaired and left as a trap to the people who come on after, whereas, at a small expense, the wall might have been rebuilt.

The contractual position of the various parties may be changed very materially if, notwithstanding the fact that a clause relating to shoring appears in the original contract, the actual shoring only arises as the result of additional work or variations from the original drawings and not from the contract work, and this will apply whether the additional work is performed by way of measured work or daywork. In the case of additional or "extra" work of all kinds, it usually happens that the builder has to carry out the work in accordance with the instructions given to him, more or less day to day, by the architect or the client, and if he has carried out those instructions in a proper workmanlike manner, without negligence, the result of an unforeseen mishap would probably not be his responsibility.

No insurance company would cover a risk without the payment of a premium, and no builder should be even expected to undertake a risk of a building collapsing without adequate payment. The position is sometimes met by the architect stating something relating to the shoring works required in vague terms in specification or quantities, which is a temptation to irresponsible builders to quote low prices to secure the contract and afterwards to reduce the amount of shoring work performed on the job to a figure commensurate with the rate in the estimate. In such a case both architect and builder may be jointly liable for negligence.

In ordinary building operations, where no special risks are anticipated, the shoring and strutting is usually left to the builder's foreman, who makes his suggestions to the builder, etc., of what is required, and upon their being approved, places the work in hand. Little trouble is usually met with during building operations where a position obviously requires shoring, as all the parties concerned are usually alive to the matter, which receives their special consideration; but in so many of our modern buildings where alterations in the building itself, or adjoining modern buildings, are concerned, it has been found that although the premises were erected in a first-class manner, conditions have developed during the past few years to place them in quite a different category from what they were in when erected.

In an important building in the City of London recently, some alterations were contemplated to the superstructure, and the architect, as a special precaution, took the opportunity of inspecting the footings and found that the brickwork was quite first-class and was erected on excellent concrete which was about 6 ft. deep, and was originally considered to be more than adequate for its purpose, but upon inspection it was found that nearly two-thirds of the area of the subsoil under the piers had sunk, either by drying out, vibration, or other causes, leaving a void at least 9 in. deep over two-thirds of the area of the foundation of each of the main piers, and sooner or later some serious accident might have occurred on the premises because of such a settlement.

There is no possible doubt that the builder and the architect engaged upon the work should take all necessary precautions to discover defects such as those indicated above; but the real difficulty occurs where one has to carry on building operations on a site adjoining some building which may have a latent defect in its foundations or general construction, and it only requires some slight vibration or alteration of load, caused during the ordinary course of building operations, to create considerable trouble. The question may often arise as to whether a builder should be held responsible for damage caused to buildings which may be due to some latent defect of which he cannot reasonably be expected to be cognizant. The only way to treat the matter fairly would be to state clearly what is in the minds of the contracting parties, and if the risk were considered to justify it, for a sum to be included in the contract to pay the premium for a proper insurance policy in respect of the operations. The rate for such insurance may be from 2s. 6d. per cent. to £3 per cent. or over on the amount covered, which would be in addition to the usual "public liability" policy. It may be urged that the time required for supervision by the architect, for works of a shoring and supporting character, would be more than he could reasonably spare, but no misunderstanding would arise if, in such an event, the architect were to notify the client and the builder that he was too busy to supervise that portion of the work.

Builders should carefully examine the conditions of any contracts which they may be called upon to sign to ascertain if the contract conditions have been included in the quantities or particulars for estimate and that an opportunity has been given to price any liability to be incurred.

BOUNDARIES, FENCES AND TREES—V.

Having in previous articles considered the ownership of trees and the rights of neighbouring owners, we now come to consider

The Liabilities Attaching to the Ownership.

This is a somewhat complicated subject, and we can only refer to some of the decided cases and comment upon them. The latest case on this point is Noble *v.* Harrison (1926, 2 K.B. 332; The Builder, June 25, 1926). In that case the defendant was the owner of an estate near Old Shoreham, on which was growing a beech tree at least 80 years old, a branch of which overhung the highway. This branch, in fine weather, broke off 15 ft. from the trunk of the tree, and fell upon the plaintiff's motor coach, which was passing along the highway at the time. The plaintiff brought an action for damage to the coach on the ground that the branch was a nuisance, and the County Court Judge had given judgment for the plaintiff, both on the ground of nuisance and on the principle of Rylands *v.* Fletcher (1868, L.R.H.L. 330) that anyone who brings upon his land something which in itself in dangerous is bound to keep it in, and is liable if it escapes and does damage. The decision did not turn on any negligence, for the County Court Judge had found that neither the defendant nor his servants knew that the branch was dangerous, and the fracture was due to a latent defect not discoverable by any reasonable inspection.

It may be said at once that on appeal to a Divisional Court the principle of Rylands *v.* Fletcher was held not to apply, as a tree, not of a poisonous nature, is not an artificial or dangerous object brought upon the land or something of an unusual nature, as to grow a tree is one of the natural uses of the soil, therefore the only point to be considered was the question of nuisance. It was contended on behalf of the plaintiff that the very fact that the branch overhung the highway made it a nuisance.

The main argument for the plaintiff on this point was founded upon a dictum of Mr. Justice Best in Earl of Lonsdale *v.* Nelson (1816, 2 B. & C. 302), "There is no decided case which sanctions the abatement by an individual of nuisances from omission except that of cutting the branches of trees which overhang a public road or the private property of the person who cuts them. The permitting these branches to extend so far beyond the soil of the owner is a most unequivocal act of negligence, which distinguishes this case from most of the other cases that have occurred. The security of lives and property may sometimes require so speedy a remedy as not to allow time to call on the person on whose property the mischief has arisen to remedy it." We may say that this dictum was the subject of considerable discussion in Lemmon *v.* Webb (1894, 3 Ch. 1; 1895 A.C. 1), both in the Court of Appeal and the House of Lords. In the Court of Appeal there was a divergence of view as to whether the dictum applied only to cases of emergency, but the majority of the Court of Appeal pointed out that that could not be so, as in cases of emergency no notice is necessary, whilst in the House of Lords it was pointed out that there was no authority for the rule to which this dictum purported to lay down an exception. The above was the extract from the judgment in Lonsdale *v.* Nelson, quoted in the report of Noble *v.* Harrison, but there is an important passage which precedes it. "Nuisances by an act of commission are committed in defiance of those whom such nuisances injure, and the injured party may abate them without notice to the person who committed them," and then follows the passage as to the exception in the case of branches of trees. Thus the whole passage relates to the question of notice and was so treated in the Court of Appeal and the House of Lords, and it may also be observed that the case before Mr. Justice Best did not relate to trees at all, it was an action for trespass, the trespass being attempted to be justified on the ground that the entry on to the plaintiff's land was necessary to repair an ancient building essential for the maintenance of something in part on the plaintiff's land. Thus, so far as trees are concerned, the whole passage was but an *obiter dictum*.

It has been necessary to refer to this dictum at some length before considering the judgments delivered in Noble *v.* Harrison. Mr. Justice Rowlatt distinguished it from the facts of that case on the ground that it only applied in cases of immediate peril, while Mr. Justice Wright distinguished it by saying it only applied to the case of branches overhanging private land, a case different in principle from a highway, as in the former case there is an interference with the neighbouring owner's absolute right to the enjoyment of his land, whilst in the case of a highway there is only the right to free passage.

Thus the contention that the mere fact that the branch overhung the highway constituted a nuisance was negatived, but there was a further contention that as in fact the branch fell it must have been dangerous before it fell and therefore a nuisance, and numerous cases were cited on this point, the effect of which Mr. Justice Rowlatt summarised as follows: "A person is liable for a nuisance constituted by the state of his property (1) if he causes it; (2) if by the neglect of some duty he allowed it to arise; and (3) if, when it has arisen without his own act or default, he omits to remedy it within a reasonable time after he became aware of it or ought to have become aware of it." These elements were all absent in this case, so the second point was disposed of. There was a third contention that as the branch overhung the road the defendant was under absolute obligation to support it as in the case where artificial objects are placed overhanging the highway, but the Court held this obligation could not be applied to natural objects, such as trees. Before leaving this case we may note that the defendant had employed a competent woodman, who was instructed to report when any branches required lopping, a fact which may have assisted the Court of first instance in finding that the defect was latent and not discoverable by any reasonably careful inspection.

In the above case the branch had fallen in quite calm weather, but in Bruce *v.* Caulfield (The Builder, March 15, 1918), in a violent gale a tree snapped off and injured the stables in the adjoining property. It was endeavoured to prove negligence by showing that about eighteen months previously a tree of a similar nature had fallen. The Court of Appeal, reversing the decision for the plaintiff given in the Courts below, intimated that had the tree been blown down by the ordinary force of the wind this might have afforded some evidence of its being in an unsound condition, but here the gale was proved to be exceptional, whilst as regards the other tree, that had been uprooted, so that afforded no evidence of negligence. It will be seen from the cases that mere unsoundness in itself would not support an action unless the defendant ought to have become aware of it and had neglected to take precautions after the fact had come to his knowledge.

Where land is being developed as a building estate, this fear of liability often causes the land to be stripped of trees. The boundary of one lot, we will say, is a row of old elm trees. When the estate is cut up into plots a purchaser buys a plot near these trees, and having built close to them he at once notifies the owner of the trees that he considers them dangerous. This may or may not be the case, and as we have shown, the purchaser of the adjoining plot can lop the branches which overhang, but supposing the tree subsequently snaps off or becomes unrooted, this notice places the owner in a difficult position. Unless he can prove a gale of exceptional violence, the very fact that he has received the notice may place the onus upon him of proving absolute soundness in the tree. Owners are fearful of litigation and this fear of liability in respect of trees is causing land under development to be stripped of trees. They are either cut down or ruthlessly topped, though in fact sound.

If a tree is poisonous in its nature and overhangs neighbouring property, then the principle of Rylands *v.* Fletcher or the maxim *sic utere tuo ut aliemum non laedas* applies, and damage can be recovered if cattle eat of the poisonous tree (Crowhurst *v.* Amersham Burial Board (1878, 5 Ex. Div. 5). But as between landlord and tenant the lessee takes the property as he finds it, and if yew trees overhang the land when he enters into the lease he cannot recover if his cattle eat thereof (Cheater *v.* Cater, 1918, 2 K.B. 309, The Builder, January 18, 1918).

Until the year 1904 there was no decision that where crops are damaged by overhanging branches of trees there was any other remedy than to lop the overhanging branches, but in Smith *v.* Giddy (1904), 2 K.B., 448) an action was brought for damage to fruit trees on the plaintiff's land caused by the overhanging branches of trees on the defendant's land, the damages being placed at £60

The County Court Judge had held that the plaintiff's only remedy was to abate the nuisance by lopping the overhanging branches, but a Divisional Court, on the principle applied in Crowhurst and Amersham Burial Board, held that damages were recoverable, and remitted the case for a new trial. The Court, in that case, admitted that there was no previous decision to that effect. This decision appears never to have been the subject of appeal, but if we may venture to say so, it seems to carry the principle of Rylands *v.* Fletcher as applied in Crowhurst *v.* Amersham Burial Board further than has been done in other decisions; but there is the dictum of Lord Justice Kay in Lemmon *v.* Webb (which we referred to in our fourth article) that the encroachment of boughs and roots is a nuisance, and for any damage occasioned an action on the case will lie and the Divisional Court also relied upon this.

In Noble *v.* Harrison, Mr. Justice Wright stated the principle in Rylands *v.* Fletcher that the person who for his own purpose brings on his lands and collects and keeps there anything likely to do mischief if it escapes, must keep it in at his peril, and if he does not do so he is *prima facie* answerable for all the damage which is the natural consequence of its escape, as being qualified by the further rule laid down in Blake *v.* Woolf (1898, 2 Q.B., 426) and subsequently approved by the Privy Council in Rickards *v.* Lothian (1913, 3 A.C. 263) that it is subject to some exceptions, one of which is that where a person is using his land in the ordinary way and damage happens to the adjoining property without any default or negligence on his part, no liability attaches to him. The principle thus laid down applies to poisonous trees, as they are likely to do mischief, but trees innocuous in their nature appear to fall within the above qualification, and except in the one case of Smith *v.* Giddy the principle appears to have been thus applied.

Since the above article was written there has been an important decision in the House of Lords in the case, Mackie *v.* Western District Committee of Dumbartonshire County Council (Weekly Notes, August 20). The action was brought against the road authority by one of the passengers in a charabanc who had sustained injury from an elm tree which had fallen across the road and struck the charabanc. There was an allegation that in road widening operations some of the soil supporting the tree had been removed and some of the roots cut, and that after those operations the tree was a patent danger, and precautions should have been taken to protect the public. The First Division of the Court of Session had held that the averments put forward showed no cause of action

t the House of Lords reversed this judg-ent, holding that there was a case for quiry; Lord Dunedin on the ground that e danger was obvious to the authority om the road, and that the defenders would liable for not disclosing an obvious dan-r or having neglected to deal with it, and rd Sumner on the ground that the road idening operations had made the danger vious and imminent and patent to a sur-yor from the road without having to enter e land of the owner of the tree.

NEW COMPANIES

THE particulars quoted below have been mpiled by Messrs. Jordan & Sons, Ltd., mpany Registration Agents, of 116 & 117, ancery-lane, W.C.2, from the documents ailable at the Companies' Registry.

DEAL POTTERIES (1927), LTD. (221,535). egistered May 2. Builders' merchants, ick and tile manufacturers, etc. Nominal pital, £2,500.

JOSEPH HUNTLEY & SON, LTD. (221,462). egistered April 28. General building and blic works contractor. Nominal capital, 20,000.

NEWPORT (MON.) SAND AND GRAVEL CO., TD. (221,440). Registered April 27. Nomi-l capital, £500.

BOYLE & WILLIAMS, LTD. (221,426). Regis-ed April 27. 84, High-street, Skipton. inters, glaziers, decorators, etc. Nominal pital, £1,000.

SEVEN CITIES HOUSING TRUST, LTD. 21,603). Registered May 4. Builders, con-ctors for public works, etc. Nominal pital, £100.

POTTS, SMITH & CO., LTD. (221,600). Regis-ed May 4. Builders and building con-ctors, etc. Nominal capital, £1,000.

BIXTETH ESTATES, LTD. (222,059). Regis-ed May 24. 11, Dale-street, Liverpool. ilders and contractors, etc. Nominal pital, £100.

BUTE LIMESTONE QUARRIES CO., LTD. £2,132). Registered May 27. Quarry ners, limeburners, stone and lime mer-ants, etc. Nominal capital, £5,000.

GREAVES, BULL & LAKIN (HARBURY WORKS), TD. (221,502). Registered April 29. 20, kingham-gate, S.W.1. Manufacturers of, dealers in, cement, blue lias and other es, chalk, cement stone, sand and bricks, Nominal capital, £400,000.

. W. NEWEY & CO., LTD. (222,381). Regis-ed June 8. Pleasant-street, West Brom-h. Builders' and plumbers' merchants. minal capital, £1,000.

LISON, RATTRAY & CO., LTD. (222,374). gistered June 8. 50, Charing Cross, S.W.1. ilders and contractors, etc. Nominal ital £5,000.

PICCIONI, LTD. (222,455). Registered 10. 15, Spiceal-street, Birmingham. ble, stone, granite and general merchants, Nominal capital, £1,000.

OMBUILD, LTD. (222,492). Registered 13. 30, Oakhurst-grove, East Dulwich, 22. Builders. Nominal capital, £2,000.

OS THOMPSON & SONS, LTD. (22,375). estered June 8. Ashton Clough-road, rsedge. Plasterer and slater. Nominal al, £1,500.

ASTIE D. BURTON, LTD. (222,661). Regis-d June 20. Builder and contractor. inal capital, £10,000.

ATSON HULME, LTD. (222,639). Registered 18. Lyons-road, Trafford Park, Man-ester. Manufacturers of and dealers in ar, concrete, and other kinds of division ; builders' merchants, etc. Nominal l, £3,000.

ILLINGWORTH & CO., LTD. (222,591). gtered June 17. 39, John-street, Brad-d Oil, paint, and varnish merchants, etc. nal capital, £4,000.

ION TRUST (LEEDS), LTD. (222,593). ered June 17. To acquire lands and taments of any tenure in England or ; to construct houses, buildings, or of all kinds, etc. Nominal capital,

THE MIDLAND BUILDING EXHIBITION

This exhibition will be held in the Bingley Hall, Birmingham, from September 5 to September 17, and we propose to publish a special report upon it in our next issue. In the meantime we give below a list of the exhibitors.

Roberts, Glazebrook & Co., Ltd., James-road, Tyseley, Birmingham.
Woodworking Machines (Birmingham), Ltd., 16, Cecil-street, Birmingham.
A. D. Foulkes, Ltd., Lionel-street, Birmingham.
J. Sagar & Co., Ltd., Canal Works, Halifax.
British Plaster Board, Ltd., 605, Tower Building, Liverpool.
New System Private Telephones (Midlands), Ltd., Triangle Buildings, Martineau-street, Birmingham.
B. Hobbs & Co., Ltd., Blackheath, Birmingham.
Expanded Metal Co., Ltd., York Mansion, Petty France, Westminster, S.W.1.
Earl of Dudley's Conygre Blue Brick Works, Dudley Port, Tipton.
Kardoak, Ltd., 115, Colmore-row, Birmingham.
Drew Clark & Co., Diamond Patent Ladder Works, Leyton, London, E.10.
J. Fowler & Co. (Leeds), Ltd., Engineers, Leeds.
Guilliett Sons & Co., 13a, Finsbury-square, London, E.C. 2.
Allen Liversidge, Ltd., Victoria Station House, Westminster, London, S.W.1.
Merchant Trading Co., Ltd., 34, Bishopsgate, London, E.C. 2.
Simplex Floor Planing and Treatment Co., Ltd., 7, Finch-street, London, E.1.
Federated Employers Insurance Association, Ltd., 111, New-street, Birmingham.
Horrell & Bowman, Ltd., 508, Moseley-road, Birmingham.
Danckcart's Woodworking Machinery, Ltd., 2-6, East-road, City-road, London, N.1.
F. Parker & Co., Ancoats, Manchester.
H. Barnett & Co., 19, Little Alie-street, Aldgate, London, E.1.
J. W. Rains, Ltd., Commercial Works, Summer-row, Birmingham.
W. T. Nicholson & Clipper Co., Ltd., Clipper Works, Kings-street, Salford, Manchester.
C. D. Monninger, Ltd., 59, Farringdon-road, London, E.C.1.
Standard Metal Window Co., Houghton-street, West Bromwich.
A. Barker & Co., 93-94, Wrentham-street, Birmingham.
Amalgamated Anthracite Collieries, Ltd., St. Stephen's House, Westminster, S.W.1.
D. Anderson & Sons, Ltd., Park-road Works, Stretford, Manchester.
S. Smith & Sons, Ltd., Beehive Foundry, Smethwick, Birmingham.
Birmingham Gas Department, Council House, Birmingham.
Komposill Syndicate, Ltd., 49, Broad-street-avenue, London, E.C. 2.
Rowe Bros. & Co., Ltd., Berkley-street, Birmingham.
Mr. A. Williams, 5, Lloyds-avenue, London, E.C. 3.
F. Parker, Ltd., Viaduct Works, Catherine-street, Leicester.
W. Mallinson & Sons, Ltd., 130, Hackney-road, London, E. 2.
Dominion Machinery Co., Ltd., Union-street, South Halifax.
Scaffolding (Great Britain), Ltd., 43, Lansdowne road, London, S.W. 8.
The Builder, Catherine-street, Aldwych, London, W.C. 2.
Enderby & Stoney Stanton Granite Co., Ltd., Enderby, Leicester.
Neatex Curtain Rail Co., De Montford-place, Leicester.
Perkin & Co., Ltd., Whitehall-road, Leeds.
C. Walsh Graham, Ltd., Timber and Slate Merchants, Wednesbury.
Parker, Winder & Achurch, Ltd., Broad-street, Birmingham.
Paper Sacks, Ltd., Weare-street, Bristol.
Furmoto Chemical Co., 1-3, Brixton-road, London, S.W. 9.
Thomas & Bishop, Ltd., 37, Tabernacle-street, London, E.C. 2.
Hurry Water Heater Co., 39, Broad-street, Birmingham.
Goodman & Co., Salford Bridge Wharf, Gravelly Hill, Birmingham.
Midland Joinery Works, Ltd., Burton-on-Trent.
Birmingham Electric Supply Dept., 14, Dale End, Birmingham.
James E. Smith, Ltd., City Chambers, Broad-street Corner, Birmingham.
Talbot Mfg. Co. (1926), Ltd., 29, Hemingway, Blackpool.
Midland Expanded Metal Co., Ltd., Fazeley-street, Birmingham.
Portland Cement Selling and Distribution Co., Ltd., 20, Buckingham Gate, London, S.W.1.
Pinchin Johnson & Co., Ltd., King Edward's-place, Broad-street, Birmingham.
The Interoven Stove Co., Ltd., 156, Charing Cross-road, London, W.C. 2.
Stewart-James, Davis & Palmer, Hylton-street, Hockley, Birmingham.
Sharp Bros. & Knight, Joinery Manufacturers, Burton-on-Trent.
H. R. Vaughan & Co., Ltd., South Shore-road, Gateshead-on-Tyne.
Wm. H Wilkinson, Institute-road, King's Heath, Birmingham.

L.C.C. Housing Schemes.

It is reported that the London County Council is to press forward this autumn with a £1,000,000 campaign of clearances affecting 22 separate areas and more than 90 congested acres. More than 25,000 people will be displaced, about 18,000 rehoused in new flats erected in the areas cleared, and provision will be made for the balance elsewhere. Important contracts are now being placed for buildings in several centres where clearances have been made during the last few months. Normally, the new flats will be five-story buildings with self-contained tenements of two, three or four rooms, let at from 10s. 6d. to 15s. a week exclusive of rates. In some of the worst property to be demolished, many tenants are now living rent free, but are paying the rates. Several of these houses are in the Ware-street, Shoreditch area, where eight-and-a-half acres of slumdom is being cleared. Contracts have been signed for four blocks of flats in Prusom-street, Stepney. New buildings will be erected on the Bakers'-alley site, Poplar, and in George's-road and Brand-street, Islington, Watergate-street, Deptford, and Bethnal Green. In Bermondsey blocks of flats will be erected.

Gravel Quarry Development near Wrexham.

It is reported that at Rossett, on the main line between Wrexham and Chester, a hill of pure gravel 200 ft. high and extending for a quarter of a mile has been discovered, and is being worked by a company with headquarters at Liverpool. Over 100,000 tons of gravel have already been delivered, and owing to the increasing demand a sum of £12,000 is to be spent in putting in new railway sidings and plant, including washing, screening, and crushing apparatus, settling lagoons, and pumping machinery. These improvements will permit of 2,000 tons of gravel for mass concrete being sent out every day.

Part of Woolwich Dockyard Sold.

The Royal Arsenal Co-operative Society of Woolwich has completed negotiations for the purchase from the Government of another large portion of Woolwich Dockyard. Several extensive buildings have been acquired, and these, with nearly six acres of freehold land and a waterside frontage of over 500 ft., will be conveyed to the Society in the near future. The purchase price is said to be considerably in excess of the £60,000 recently paid by the Society for that part of the dockyard now known as Commonwealth Buildings.

✱SEPT. 17.—**London.**—Chief Draughtsman required in the Works Department by the Westminster C.C. John Hunt, Town Clerk, Westminster City Hall, Charing Cross Road, W.C. 2., on printed forms

OCT. 5.—**Durham.**—Assistant Architect required by the County of Durham Education Dept. County Education Architect, 34, Old Elvet, Durham.

✱—**Nigeria.**—Two architects or building surveyors to act as Resident Engineers required for two tours of from 12 to 18 months' service, with possible extension, required by the Government of Nigeria. Crown Agents for the Colonies, 4, Millbank, S.W.1, quoting M/15273.

Dangerous Structure in Piccadilly.

Traffic has been diverted from the upper ıd of Great Windmill-street, Piccadilly, here a corner house has been scheduled as dangerous structure. A well-defined ver-al crack has appeared on the outer wall No. 32 close to its line of junction with the xt house. No. 32, which stands at the rrowest part of Great Windmill-street, is id to be at least 150 years old.

BUILDING STONES*

Mr. Warnes' book will undoubtedly fill a gap, the need for which may better be realised by a short survey of the many public and other buildings now in a state of unworthy repair, either through the choice of the wrong stone or else through the use of the wrong methods of preservation. These subjects have been grossly neglected in the past, partly through lack of adequate chemical research, and one result that may be quoted is that a million odd pounds are to be expended upon repairing the stonework of the Houses of Parliament.

One section of the book is devoted to the properties of stones, in which the author gives a list of over a hundred building stones and marbles either in use to-day or else incorporated in erected buildings, with a concise account of their appearance, workable qualities, chemical composition, and physical properties, to which he adds a short report upon their weathering records. There is a valuable section on the decay of stone. According to the author, decay of building stones is brought about by four things, often all acting together. These are physical processes, chemical processes, conditions set up in the stones during the process of geological formation, and lastly structural defects in the building in which the stone is used. The author is very definite in emphasising that stone is a chemical, and it would seem that the chemical processes, working in most cases in conjunction with the physical processes, are instrumental in bringing about the decay of stone. A point of interest made by the author when dealing with soot and the pollution of atmosphere is that the suppression of smoke by the introduction of smokeless fuel will not remove all the deleterious substances from the atmosphere. He instances coke—a smokeless fuel—which contains sulphur. This forms on combustion sulphur di-oxide, which eventually is converted into sulphuric acid by oxidation and hydration whilst in the air.

In the section dealing with the preservation of stone, the author has some forceful remarks to make on the use of caustic soda—or the various preparations under disguising names—in cleaning buildings. "There is no need to hesitate," he says, "in placing caustic soda amongst the most dangerous materials from the point of view of damaging stone (or brickwork)." The physical action on various stones of caustic soda causes, we learn, the production of pressure due to changes in molecular volume and also to crystal growth, which result in exfoliation of the stone. Steam cleaning processes, according to the author, are the best for cleaning stonework, and, whatever the result, are harmless. Coming to the methods of preserving building stones, the author divides them into two classes, consolidating and waterproofing processes. The most common material in use for the latter is paraffin wax, but we gather that practical experience in this country with some of the paraffin wax preparations has proved that it is impossible to maintain a treated stone in a waterproofed condition for more than three months, due probably to the difficulty of drying the stone before application. Some account is given of a process of consolidation by means of silicon ester. This substance, a preparation of silica and alcohol, hydrolyses when exposed to the atmosphere, depositing silica and setting free ethyl alcohol. When silicon ester is used on stone, the deposited silica acts as a binding material towards the loosened grains, whilst it covers the particles of stone at the immediate surface with a thin film of silica. The volatile alcohol is set free and evaporates, no injurious by-products being left in the stone. We ourselves have seen stone treated by this process, and we believe that it has stood successfully the only test of worth—that of time.

The letterpress of this useful work is illustrated throughout by upwards of sixty photographs and photomicrographs of various building stones.

* "Building Stones: Their Properties, Decay, and Preservation." By A. R. Warnes, F.I.C., A.I.Struct.E. (London: Ernest Benn, Ltd.) 16s. net.

NEW BUILDINGS IN LONDON

Baker-street.—PREMISES.—In connection with the new premises to be erected over Baker-street Station, for the Metropolitan Railway Co., Mr. A. W. Clark, A.R.I.B.A., is the architect, and Messrs. Higgs and Hill, Ltd., are the general contractors. Messrs. Lambourne and Co., Ltd., 64, Victoria-street, S.W.1, are doing the steelwork, and Messrs. C. Isler and Co. have secured the contract for the artesian wells. So far no other subcontract has yet been let.

Collier's Wood. — STORE. — The Royal Arsenal Co-operative Society are considering a proposal to add an additional store on part of the land adjoining their present premises at Collier's Wood.

Camberwell. — ALTERATIONS. — The Royal Arsenal Co-operative Society, Ltd., are to have certain alterations made to their Camberwell branch. The interior is to be remodelled to give additional space.

Edmonton. — HOUSES. — The Edmonton Urban District Council recommend the erection of 80 additional houses. The houses are estimated to cost £45,433.

Eltham.—SHOPS.—A contract has been entered into by the Royal Arsenal Co-operative Society, Ltd., for the purchase of the Constitutional Club with land and buildings adjoining, having a frontage to Eltham High-street.

Grays (Essex). — PREMISES. — Plans are being prepared by the C.W.S. architects' department for the provision of an extended drapery and millinery department and an up-to-date café for the Co-operative Society.

Gunnersbury.—BANK.—A site at the corner of the Great West-road and Gunnersbury-lane, Chiswick, W. 4, has been secured by the National Provincial Bank, Ltd., for the erection of new premises.

Lewisham.—REBUILDING.—Plans are being prepared for the rebuilding of the "Tower House" stores, Lewisham, for the Royal Arsenal Co-operative Society, Ltd.

South-place.—PREMISES.—Messrs. Trollope and Colls, Ltd., of Coleman-street, E.C., are the builders for the premises about to be erected in South-place, Finsbury, E.C. Messrs. Joseph, architects, 2, Paul's Bakehouse-court, E.C.4, have prepared the plans.

St. Pancras.—DWELLINGS.—A step further is now being made by the London County Council, who are inviting tenders for the construction of the foundations for a block of dwellings on the Ossulston-street site, St. Pancras, N.W. Mr. G. Topham Forrest, F.R.I.B.A., is the architect.

Strand. — IMPROVEMENTS. — In connection with the Strand Improvement Scheme between 73, 74 and 75, and 11 and 12, Adam-street, we stated in our last issue that the site belonged to Messrs. Appendrodt, Ltd. This statement, we are informed, is incorrect.

Wandsworth. — BUILDING. — The Royal Arsenal Co-operative Society, Ltd., have purchased a plot of land adjoining their present branch at Earlsfield.

Whitechapel.—CONVERSION.—The London County Council has provisionally sanctioned the conversion of the Pavilion Theatre, Whitechapel, into a modern picture theatre. We understand that no appointment has yet been made with regard to an architect or builder.

Whitechapel.—WAREHOUSE.—Messrs. Mullen and Lumsden, builders, South Norwood, have secured the contract for the erection of a warehouse in St. Mark's-street, E.1. Messrs. Moore-Smith and Colbeck, F. and A.R.I.B.A., 14, Union-court, Old Broad-street, E.C.2, are the architects, and Mr. J. Pritchard-Williams, F.S.I., is the quantity surveyor. The work is for Mr. F. Stanton.

PROPOSED NEW BUILDINGS & OTHER WORKS*

In these lists care is taken to ensure the accuracy of the information given but it may occasionally happen that, owing to building owners taking the responsibility of commencing work before plans are finally approved by the local authorities, "proposed" works at the time of publication have been actually commenced Abbreviations: T.C. for Town Council; U.D.C. for Urban District Council; R.D.C. for Rural District Council; E.C. for Education Committee; B.G. for Board of Guardians; B C. for Borough Council; P.C. for Parish Council; M.H. for Ministry of Health; M.T. for Ministry of Transport; C.B. for County-Borough; B.E. for Board of Education; M.A.B. for Metropolitan Asylums Board; and M.W.B. for Metropolitan Water Board.

Following is a list of abbreviations:—Borough Surveyor, B.S.; Borough Engineer, B.E.; District Surveyor, D.S.; Clerk, C.; Town Clerk, T.C.; County Engineer, C.E.; County Surveyor, C.S; County Architect, C.A.; Surveyor, S.; Engineer, E.; Borough Architect, B.A.; Architect, A.

ARDSLEY.—U.D.C. offered a site at Blackgates housing estate to West Riding E.C., for Middle school.

ARMAGH.—Plans been passed for school to cost £20,000.

BADSEY.—Worcestershire E.C. approved plans for subjects centre.

BARKING.—A deputation of the Barking Cottage Hospital Committee, accompanied by the architect, paid a visit of inspection to Romford Victoria Cottage Hospital in connection with a view to collecting data for their own use in preparing plans for the proposed hospital at Barking.

BECKENHAM.—Kent E.C. acquired a site for secondary school.

BOURNEMOUTH.—Commencement been made with new length of Undercliff promenade and sea wall at Fisherman's-walk, about a mile to east of Boscombe Pier. The cost is to be about £10,000.

BIRMINGHAM.—Proposal to borrow £114,250 to enable the City Council to carry out certain sewerage works has been enquired into by M.H.

BRECON.—Visiting Committee of Mid-Wales Counties mental hospital, at Talgarth, Breconshire, are considering erection of block to accommodate 60 female patients. Architects are Sykes & Evans, 7, Chapel-walks, Manchester.

BRIDGEND.—Rev. I. B. Inizan, of St. Robert's Church, Bridgend-rd., Aber Kenfig near Bridgend, is proposing to erect school. Plans are being prepared by F. R. Bates & Son, A.R.I.B.A., A.'s, 76, Bridge-st., Newport, Mon., and provide accommodation for about 250 scholars.

BRIGHTON.—Greyhound racing track is to be erected near Hove Park, for G.R.A. G. E. Marshall, of London and Liverpool, is the architect.

BROOKFIELD.—Rugby Hospital of St. Cross authorities are faced with an expenditure of about £500, as the result of a fungus growing into wall of nurses' home at Brookfield.

BROUGHTON HACKET—Worcestershire E.C. is seeking site for school.

BUDE.—Inquiry has been conducted by M.H. into proposal of U.D.C. to build tea room and shelter at Mentone, Summerleaze, at £2,200.

BURY ST. EDMUNDS.—B.G. recommended to offer 2½ acres of land to T.C. for purpose of building a school.

CAVAN.—Cavan Co. Council appointed P. J. Brady, Ballyhaise, architect, for carrying out renovation of Ballieboro' courthouse, renovation of Cavan courthouse, or alternatively, erection of County hall and offices, and repairs to Cavan technical schools.

CHALFONT.—At a cost of £9,000 the hospital is being extended.

CHAPEL-EN-LE-FRITH.—R.D.C. approved erection of cement works in the Hope Valley, by G. & T. Earle, of Hull.

COVENTRY.—E.C. recommend sanction to loan of £1,450 for purchase and fencing of land adjoining Edgewick Council school.

DONCASTER.—Internal reconstruction is to be carried out at the Danum Hotel in High-st. A. & F. Mosleys, Ltd., architects, Leeds.

DUBLIN.—Plans for new buildings and works of reconstruction approved by City Architect: 35, Cuffe-st. (rebuilding back wall, etc.)—Bourke; Coombe hospital, restoration of lavatory—Governors; Merton-av., (corner), Sandford, residential shop—J. P. Somers; Catholic University schools, Lower Leeson-st., new chapel—Rev. Lawless, S.M.; St. Peter's National schools, Phibsboro', hall—Rev. J. Kickham, C.M.

EDMONTON.—U.D.C. are to apply for £44,000 for 80 houses. Plans passed:—Rowell & Co., additions to Enoch & Co.'s factory, Angel-rd.; Lawes, Cherry & Co., 12 houses, Croyland-rd.; H. Curnew, 12 houses, The Meadway; A. F. Whitlock, house in Cowper-rd.

EVESHAM.—Worcestershire E.C. are endeavouring to secure a site for school.

FARNHAM.—Offers of two housing sites, one at Wyke, and one at Normandy, been considered by R.D.C., and Council decided to view the site at Wyke.

GOLBORNE.—Rev. J. Clarke and parishioners of All Saints' Church, are proposing to erect Church on sites off High-st.—Plans are by Barker & Higson, A's., 21, Wood-st., Bolton.

GUILDFORD.—B.S. is to prepare plans for open-air bath at Mill Mead Foundry.

HALSTEAD.—R.D.C. are to erect houses as follows:—Great Yeldham, 6; Ridgewell, 4; Halstead rural, 6; Pebmarsh. Great Maplestead, Gosfield and Sible Hedingham, 2 each.

HAYES.—U.D.C. approved plans:—Bungalow, Hayes-end, G. Beeden; 76 houses, Sandow estate, R. J. Mackenzie & Sons, Ltd.; 2 houses, Mount-rd., C. J. A. Mead; 2 houses, Willow Tree-la., S. L. M. Avery.

HINCKLEY.—R.D.C. accepted tender of £4,370 for 10 non-parlour houses at Burbage.

HOLLINGBOURNE.—R.D.C. approved plans:—Two cottages, Chart Corner, Chart Sutton, H. G. Kleinwort; mission hall, Sandling, Boxley, for the church; bungalow, Boxley-rd., Walderslade, Mr. Peters; two cottage bungalows, Woodcut, Hollingbourne, Mr. Skinner.

HORNSEA.—U.D.C. decided to offer for disposal for building purposes site of the covered-in tennis court facing Flamborough-rd., and now fronted with a brick wall, and land with Cliff-rd., frontage between Elim Lodge and the adjoining property on its west side.

ISLEWORTH.—Public hall is to be erected in Twickenham road for the Roman Catholic Church.

OBITUARY

Mr. H. W. Bentley.

The death took place at his home, "Francesca," Rue de St. Lawrence, Waltham Abbey, Essex, a few days ago, of Mr. H. W. Bentley, the last surviving partner of the old-established firm of John Bentley & Sons, builders and contractors, Sun-street, Waltham Abbey.

The death has occurred, at Topsham, of Mr. George Bellamy, builder. Mr. Bellamy was 51 years of age.

The death has occurred of Mr. A. Wybar, aged 65 years, painter and decorator, Airdrie.

Ship Ventilation.

The General Steam Navigation Company's long connection of over a century with the pleasure steamboat traffic between London and Margate and Ramsgate is remarkable, for it is recorded with pride that during that long period not a single serious or fatal accident has occurred. The steamers used have been always known as "The Eagles," the two most recent, the "Golden" and "Crested" Eagles, must be very widely known. Of these the last is the latest built, and is a finely appointed vessel, fitted with every convenience for the comfort of the passengers. A feature of much importance and interest is the ventilation equipment. Of necessity the height between decks is restricted, and in order to secure an efficient supply of fresh air, ducts are provided with openings at frequent intervals, so that the fresh air is actually forced into the saloons, thus displacing the used-up air, and so ensuring the absence of the usual heavy feeling when entering a cabin, saloon, etc., so well known to voyagers. This appears to be an improvement upon the method of *extracting* the foul air, and leaving the air drawn in to come from all parts of the ship's hold, as is frequently done.

First-Aid Boxes or Cupboards.

The Chief Inspector of Factories gives notice that, by Order dated June 27, 1927, the Secretary of State has prescribed that, as from October 1, 1927. all materials for dressings contained in the first-aid boxes or cupboards which are required to be provided in pursuance of Section 29 (1) of the Workmen's Compensation Act, 1925, or Regulation 4 (a) of the Docks Regulations, 1925, or Regulation 47 of the Building Regulations, 1926, shall be those designated in, and of a grade or quality not lower than the standards prescribed by, the British Pharmaceutical Codex, 1923.

THE BUILDERS' STANDARD ADMINISTRATION AND PRACTICE*

In this work the author sets out to provide a manual on methods to be used in builders' staff administration and organisation. The book states very clearly and in detail the manifold duties of the supervising and office staff. Years ago many builders ran their businesses with little or no organisation and the minimum amount of book-keeping, but the ever-increasing numbers of returns required for Insurance, Government, Income Tax and other purposes, and the different methods of contracting, make some complete office system or organisation essential. The duties of the various members of the office and supervising staff are very fully set out, and a draft is given of many suggested forms for use on costing and other records.

These drafts are unfortunately printed in such small characters that some readers will experience a difficulty in following them. Charts are given to serve as a guide to the separation of duties to be undertaken by an office staff of about 30 persons, and could be adapted if a less number were employed. To need an office staff of 30 persons a firm would be engaged upon works of considerable magnitude. Among other subjects, timekeepiug and other duties are mentioned, but in a business with a large turnover the employment of a travelling timekeeper as an independent check by the head office should have been mentioned. Some of the large contractors have adopted such a system.

The author expresses his opinion that the practice of paying leading hands for time that has not been worked should be discouraged; whereas certain practices should be definitely forbidden: payment for any special services rendered should be by separate payment, and not by the inclusion on the pay-roll of hours not worked. Drafts are given of suggested forms for inter-departmental returns of many kinds, and one gets the impression of over-organisation and red tape. The job returns of costs, &c., must be prepared or overlooked by the foreman on the site, who is usually fully employed in producing the work, and should be relieved of all office work where possible. Builders have found out to their cost that over-organisation and the multiplication of costing systems and book-keeping methods do not pay in the end, and as the flow of work usually expands and diminishes, it is not easy or desirable to reduce the cost of an expensive office staff as trade slackens for a season, and it becomes a temptation to tender very low prices to keep the organisation employed. However, that the systems advocated must be adapted to suit the size of business in view is specially mentioned. The author is to be congratulated on having produced a book of great utility, and all concerned in the organisation and routine side of builders' office work should read it. Many will be glad to avail themselves of the information it contains if they contemplate commencing or reorganising a business.

* By J. H. Bennetts, A.I.O.B. With Foreword by Professor C. H. Reilly. (London: Crosby Lockwood & Co.) 4s. 6d. net.

NEW BUILDINGS IN SCOTLAND

Selkirk. — Improvements. — The Property Committee of the Town Council has submitted a recommendation that the Victoria Halls, in which at present the electric light is being installed, should be painted and redecorated. This recommendation has been approved by the Council.

Glasgow.—Housing.—The Scottish Board of Health has sanctioned the Town Council to the borrowing of £1,780,043 for housing purposes.

Edinburgh.—Cinema.—A new cinema is to be erected in Edinburgh with a seating capacity of 2,800. The new cinema is to be built so that there will be reserved seating accommodation in certain portions of the house, in addition to a number of private boxes. The screen will be erected in front of a very large stage. A site has been secured in Canning-street, adjoining Rutland-square, at the West End of Princes-street.

Glasgow. — Houses. — Application by t Corporation of Glasgow Housing Departme to erect houses at Knightswood has be granted by the Dean of Guild Court. O hundred and seventy-two two-story blocks w be erected, made up of 358 three-apartme houses, 134 four-apartment, and 18 fi apartment. Six hundred and twenty-th blocks of the same type will be erected Carntyne, where there will be 1,442 thr apartment, 522 four-apartment, and 14 fi apartment. The houses are estimated to c £222,500.

Greenock.—Hospital.—The Royal Infirma directors have placed the contracts for t erection of the new auxiliary hospital in t Inverkip-road. The estimated cost of t scheme is £60,000. The plans for the n building have been prepared by Mr. Maitlan of Messrs. Abercrombie & Maitland, Paisl in co-operation with Colonel Mackinto medical superintendent of the Western I firmary, Glasgow.

Stonehaven.—Housing.—The Town Coun are considering estimates for the building the new flatted type of houses, consisting four houses in each block.

Aboyne.—Houses.—Six more houses are be erected at Aboyne for the Deeside D trict Committee.

Edinburgh. — Rebuilding. — The Emp Theatre, Edinburgh, which is to be closed the end of the year, is to be entirely rebui The theatre is owned by the Moss Empires C The plans for this work have been prepar by Messrs. William & T. R. Milburn, arc tects, Sunderland.

Liverpool Cathedral Official Handbook.

We have received a copy of the rece seventh edition of this handbook which, co piled by Mr. Vere E. Cotton, O.B.E., is comprehensive guide to Liverpool Cathedr In addition to a careful description of t work in its every aspect, it includes a la plan in the of form a folder, and a series photographic and other views. The work published for the Liverpool Cathedral I velopment Committee by Messrs. Littleb Bros., of 3, Crosshall-street, Liverpool.

TRADE NEWS

The Uses of Gas.

The British Commercial Gas Association, 28, Grosvenor-gardens, S.W.1, have issued a further number, No. 161, of the "A thousand and one uses for gas" series. This present issue gives some interesting facts regarding Messrs. Negretti & Zambra's factory, with some account of the rise to fame—through the quality of their instruments — of these well-known "weather prophets." The issue will be sent free upon request.

Automatic Sprinklers.

The current issue of the "Sprinkler Bulletin," which is issued by Messrs. Mather & Platt, of Park Works, Manchester, contains a letter from the Earl of Sandwich, recommending the "Grinnell" system of sprinkler for old country houses. His own seat, at Hinchingbrooke, Huntingdon, has been fitted on this system, and the results would seem to be satisfactory. Full particulars of the "Grinnell" system, together with a copy of the "Sprinkler Bulletin," will be sent upon application to the makers.

"Lift Logic."

This is the title of a small publication issued by Messrs. Etchells, Congdon & Muir, Ltd., of Manchester, manufacturers of the "E.C.M." lifts. An interesting little journal, the current issue contains an article on the use of lifts in departmental stores by Mr. W. S. Beaumont, F.R.I.B.A., as well as a number of articles on lift matters.

The publication, together with a leather binding case in which to insert the various issues, will be sent upon application to the company at Ancoats, Manchester.

Tubes and Fittings.

We have received notification that the Walworth Munzing, Ltd., manufacturers and distributors of tubes, fittings, valves, and tools, have changed their firm name to Walworth, Limited. We understand that there will be no change in ownership, management, or policy, nor any change in the address, which remains as 90-96, Union-street, S.E.1.

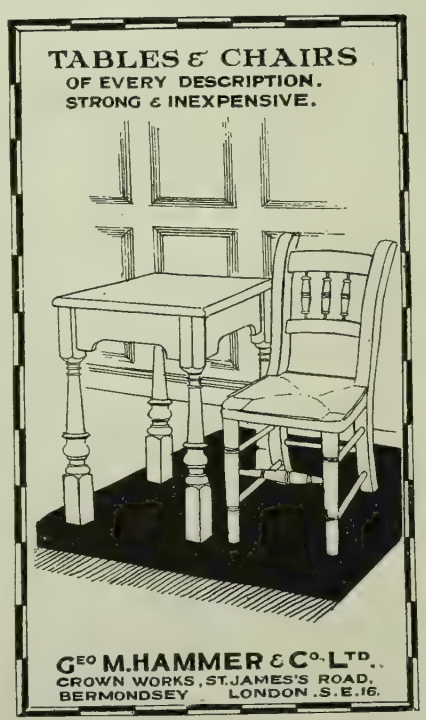
Illuminated Signs.

The Brilliant Sign Company, Ltd., of 131, Uxbridge-road, W.12, have, we understand, perfected a new sign, registered the "Sunray." It is a box sign composed of rustless leaded steel or bronze, with a reflector so that any wording to choice is brilliantly illuminated wherever there is any light, doing away entirely with all artificial light. The effect is most startling, and while it is a most inexpensive sign to install, the upkeep is nil. These signs are made in all sizes, and the letters can be any size, design, and style. Further information may be obtained on request.

Nag Hammadi Barrage.

Following an announcement which recently appeared in the Press that Messrs. Sir John Jackson, Ltd., had received the contract for the new Barrage on the Nile at Nag Hammadi, it is of interest to learn that Messrs. Ransomes & Rapier, Ltd., of Ipswich, have now received the order for the sluice gates and operating machines in connection with this scheme. The site for the proposed Barrage, which will be over half a mile in length, is situated some 500 miles up the river between the existing Barrages of Assiut and Esna. The object of the Barrage is to raise the level of the river up-stream sufficiently to command the irrigation canal, which will take off just above the Barrage, and thereby irrigate an area of approximately 500,000 acres at all seasons of the year, formerly only possible at a time of high flood. This will enable two crops per annum to be grown instead of one. The contract now secured consists of roller type gates for the 100 openings on the main Barrage and for the six openings at the head of the irrigation canal. Each opening is provided with two gates of 6 metres span running in parallel grooves, which will permit of their being lifted out separately if desired. These gates have a depth of 6.1, 7.1 and 8.1 metres respectively, according to their position in the Barrage. Two power-driven machines travelling on rails on top of the Barrage will be provided for operating the gates to regulate the flow of water through the openings, also for removing the gates when necessary. A small machine will work on the canal head for the regulation of the gates controlling the flow of water into the canal.

Travelling Exhibit of Radiators.



The Travelling Exhibit of the National Radiator Co., Ltd., fitted with a working installation of the "Ideal" Cookanheat and "Ideal" Classic Radiators, will demonstrate from September 6 to 9, at the Covered Market-square, Birkenhead.

Concrete Mixers.

An enterprising move to catch the overseas market has been made by Messrs. Winget (1924). Ltd., who have taken a stand at the Canadian National Exhibition, which opened at Toronto on August 27, where a full range of the new Open Drum Mixers is being exhibited as a preliminary to extending the "Winget" activities both in Canada and the United States. Besides the Toronto Exhibition, "Winget" machines will be well represented both at Belfast's Housing and Building Exhibition, which opens on September 3, and at the Glasgow Housing Exhibition, which opens on September 21. An exhibit at the Belfast Exhibition, where the "Winget" exhibits are to be displayed on the stand of Messrs. W. D. Henderson & Sons, Ltd., their agents for Ulster, will be the "Winget" Portable Stone Breaker and Crusher, a compact, combined unit, driven by a 5-h.p. "Lister" petrol engine, ready to start work at once anywhere.

Wire Netting, etc., and Merchandise Marks Act, 1926.

The Standing Committee (General Merchandise) appointed by the Board of Trade have reported on their inquiry as to whether imported wire netting and woven wire, and imported mill bobbins, should be required to bear an indication of origin. The reports are now obtainable from the Stationery Office either directly or through the usual channels.

PATENTS

APPLICATIONS PUBLISHED.*

263,121.—I. G. Farbenindustrie Akt.-Ges. Production of cements.

266,335.—L. E. Chassevent: Process an apparatus for tempering plaster.

267,927.—F. Moser: Concrete-mixers.

268,410.—E. D. Dennis: Construction buildings.

268,422.—J. W. Proctor and A. Gilber Combined folding table and chair set.

268,442.—R. A. Ryves, M. E. Williams an L. Hall: Tile or slab making machines.

268,444.—T. B. Colman: Revolving doors.

THE BUILDER

A JOURNAL FOR THE ARCHITECT AND CONSTRUCTOR

WITH WHICH IS INCORPORATED "THE BRITISH ARCHITECT."

VOL. CXXXIII. No. 4414. SEPTEMBER 9, 1927.

CARS AND HOMES

THE motor car, in the impetus of its arrival, has been a poor friend to architecture, or perhaps we ought to say to "building." The first asset which the Victorian young man would display before his prospective father-in-law was the possession of a little freehold, with facilities for extension. Now, without consulting possible fathers-in-law, he woos his bride in a two-seater and, after he is married, the family income is spent upon a larger car and a standardised garage. House and decoration must wait. The motor habit has thus created an artificial necessity which has profoundly altered the economic position of the middle classes, and, owing to the change, less money is expended not only on railway tickets, but also on home architecture. Whether or no the railways will be able to compensate their losses in the future cannot be discussed here, but, even allowing for a still further growth of the motor habit, let us try to discover whether the rivalry of the car, looked at from the standpoint of small house architecture, is as serious as would appear at first sight. Let us consider the period when middle-class house building was practically unfettered and large fortunes were made in the development of real estate. Between the Golden and the Diamond Jubilees were ten years of British prosperity and intensive domestic idealism, undisturbed by serious outside interruption or internal discord. Middle-class families "resided" in "villas" with a complacent assurance that the conditions of the 'nineties were as static as those during the centuries of ancient Egypt, except for such modification as applied science, harnessed to their chariot of comfort, might contribute. Real estate and leaseholds dominated the outlook. Property was "as safe as houses." How, then, amidst such assured economic stability (consols were well over 100) did small architecture fare? The answer is there for us to see and to weep over. Those who had money to spend and who cared for their homes were those who were most active in disfiguring England. It is the same tale from Land's End to the Hebrides. Everywhere local character, charm and dignity were sacrificed to short-sighted "business efficiency" and bad taste. Such evils must get worse before they can get better, and the motor car may have been the means of quickening the climax of ugliness that, we believe, is now behind us. The motor car, more than any other agency, has made the whole country a public concern. "I can do what I will with my own," is a trumpet call that has been drowned by a thousand hooters. The roads and all that lies alongside are subjected to a common policy; the motorist is a serious factor in regional development. This recognition of public before private amenity on the road is probably the greatest psychological change in this generation, and is more potent than any political catch-cry.

In one direction the arrival of the car, with the road widening consequent upon it, has seriously menaced architecture. At Croydon, disaster to the Whitgift Hospital was only averted at the eleventh hour. Throughout the country small villages with narrow streets stand in the way of improved motor roads. In such cases there can be no question that whenever possible by-pass roads should be provided, not only to avoid interfering with the buildings lining the streets but to obviate the danger and annoyance to the inhabitants living on either side of what is virtually a racing track. If the by-pass roads are sufficiently close at hand the village is always accessible to those who wish to visit it, or stop there, but the disadvantage and danger of a roaring stream of through traffic are eliminated. Mr. Hilaire Belloc has pointed out the anomaly that with the ever-increasing number of motors there has been no corresponding improvement in trunk roads. Fast motor cars are nearly as dangerous as trains, yet while every railway line goes over or under the road, or is fitted with gates at level crossings, no provision of the kind has been made for ensuring safety on arterial motor roads.

The dust, smell, noise, and danger due to the traffic on a great through road have had a serious effect upon the value of house property lining the road. Many people would prefer an inferior house on a by-road or in a cul-de-sac to a cheaper and better house on the main road. The tendency will, therefore, be to avoid building on main roads and, in so far as this will check "ribbon development," it will be to the good. But there is also the likelihood that existing large houses on the main roads may, in time, degenerate through small flats into tenements. A deterioration in the standard of upkeep and garden cultivation along our great roads would be highly undesirable, and it would mean a larger number of children playing on or near these highways. If this process of degeneration is to be warded off, we must exact a higher standard of courtesy with lower speed and less noise and smell than are at present associated with the average user of through residential roads. When we hear complaints against the ill-bred motorist let us remember that motorists do not form a class apart. The ordinary motorist is the ordinary man, and even if his average is not very high his recreation has already taught him lessons in social give and take that may help to make him more responsible and far-seeing than was his father to the general good of the greatest number.

Moreover, the motorist is now ceasing to find joy in mere motoring, as the cyclist has already done in mere cycling, and will not drive without an object. Scenery, buildings, historic regions are sought out, and those who profit by the near vicinity of such advantages are becoming alive to their assets. There are golden opportunities ahead for the picturesque old inn if they are only grasped. Much of this sight-seeing is slight and fickle, but with it lies a residuum of worth. We know that the domestic Victorian who led his family annually for a month by the seaside was not an art patron; his counterpart to-day may still have deplorable preferences, but his average of taste is definitely better and is improving. Popular periodicals are full of illustrated articles giving sensible advice on economical house decoration and furnishing. Simplicity is generally encouraged and the patterned lace curtain is giving way to gay-coloured casement curtains. Many of the motor journals make a feature of these articles. We cannot revert to eighteenth century conditions in order to nourish our artistic judgment, but we should use every factor, including easy transport, to quicken interest in our surroundings. Cars, however cheap, will involve correspondingly cheaper houses, but these need not be nastier, and if we have faith we may also have assurance that all experience must tend to enrich life and taste rather than to impoverish it.

Moreover in design the modern car marks a definite advance in what has been called engineering aesthetics. A fine car is not only a perfect machine, built to embody a scientific streamline, it is also the product of deliberate thought; it expresses a conscious attempt at beauty, but a beauty subservient to efficiency and essentially structural. A man with an eye for a good car is likely to recognize and appreciate a good house, and an architect need only refer to the similarity underlying the art of either to make a ready convert to architectural principles.

NOTES

An Explanation.

The letter which we publish on page 381, over the signature of Sir John Simpson, needs a word of explanation. Any past-President of an important professional body who feels compelled to resign his membership rather than relinquish his self-respect must feel he has good grounds for such action, and if he happens to be a past President who has behind him—as Sir John has—a record of exceptionally successful and valuable work on behalf of the Institute he has served, the general body of members will naturally ask for an explanation, which they will no doubt expect us to give. It will be remembered that Sir John was appointed some 16 years ago to the Council of the British School at Rome, being in fact one of the original members appointed under the Royal Charter. On July 22 last he was officially informed that the President and Council of the R.I.B.A. had removed him from his seat on the Council of the British School and had appointed a successor. No one, we suppose, will question the right of the Council to take this course, whether ill-advised or not, but what will surely be questioned is the fact that they did so without troubling to inform Sir John of their intention or to ascertain his views on the matter. Sir John Simpson is one of our few architects who have an international standing, and for this reason alone, apart from his great services to the Institute in so many ways, he was surely deserving of more courtesy and respect. We cannot quite understand the action of the R.I.B.A. Council.

The Function of the Architect.

The opinion was once clearly expressed by a well-known architect that the architect and builder might very well be merged in one person or firm. Now a commentary on that suggestion is to be found in the resolution passed at the International Congress of architects at The Hague, that the distinction between the functions of the architect and contractor should be legally defined, and that architecture should be made a close profession. There is no doubt that there is a very wide diversity of idea amongst the public as to the proper functions of the architect. Probably, the most widely accepted view is that the architect is chiefly a sort of policeman appointed by the client to see that the contractor does not take advantage of him. The idea that the main function of the architect might be to impart beauty and interest into building does not find very general credence. We all realise that good planning, economical and sound construction, and the production of buildings which shall fulfil their intended purposes in the most efficient way may be set down as within the proper functions of the architect. But it cannot be forgotten that many who can do this much, have little or no sense of beauty and distinction as applied to building. In these days of active development in all the items which go to make an efficient economic building, there are increasing necessities for thought and oversight which make the full functioning of the chief director of a great building a very arduous and responsible task. And we all know only too well that an architect who can combine all the functions which are sought to be imposed upon him is a very rare individual.

Standardisation of the Brick.

We publish on page 381 a letter from Mr. Nathaniel Lloyd, in which he pleads the necessity for a complete definition of what architects consider good bricks. A letter from Mr. Lloyd on the same subject to the Royal Institute of British Architects is appended. The definition of a good brick is known to every architect. The charm of brickwork lies in the use of various sizes of bricks, according to the nature of the building required and the taste of the architect, and the character of these bricks would be largely destroyed were they all to be of uniform size. As regards colour, the brickmaker is largely at the mercy of the type of clay in his district, and it is always open to the architect, when specifying, to employ a brick from any locality that fulfils the necessary requirements. In short, the architect can, and does, obtain from the brickmaker precisely what style, size and colour of brick he desires and as a consequence any attempt at a standard definition is redundant. Whether it would be possible to standardise bricks as far as colour and texture are concerned is a matter upon which we should be glad to have the views of our readers.

Saving Our Beauty Spots.

In spite of persistent agitation and repeated warnings by those who value the beauty of an unspoiled countryside, the erection of unsightly structures continues apace. As we pointed out in a recent leading article, our seaside resorts are equally affected by the modern blight of ugly building. A correspondent who has recently toured along a considerable part of the south coast of England, writes to say that he has seldom seen a more depressing spectacle than the long rows of grotesque bungalows and unsightly shacks that have sprung up like mushrooms around such beauty spots as Dymchurch, near Folkestone, and Felpham, near Bognor. However, the picture is not altogether a black one. "The abuses for which speculative builders are responsible," he continues, "are becoming so glaring that rural councils are becoming alive to the need to control design. I was shown, for example, a resolution that was passed this summer by the Rye Rural District Council, who resolved that their Surveyor be instructed that in any case when

Pavilion, Boship Farm, Sussex.

Workers' Houses with Public Baths, Hilversum, Holland.
M. W. M. Dudok, Architect

unsightliness' was likely to arise in the ise of new buildings, he should submit ie plan to the Area Joint Town Planning ommittee before recommending them r approval. This Committee was rmed as the result of a conference ddressed by Mr. G. L. Pepler at Hastings the spring."

Rural Industries.

The efforts of that useful body, the Rural Industries Bureau, to revive village craftsmanship, so diminished through the changes to machine production and the substitution f mechanical traction for horse-drawn ehicles, are very much to be valued s a contribution to the recovery of illage life and industry. We are told iat at the present time, large numbers f country blacksmiths, in addition to ie repairing of agricultural imple- ents, are making decorative wrought- on work, and apply their skill to making mpstands, candlesticks, weather vanes, tes, fire-irons, etc. The Bureau ndertakes to supply designs when sired, and this is a desirable though some way a hazardous assistance, in der to guide the taste in design. Ex- riments are also being made to afford lage carpenters, and wheelwrights, portunities to extend their trades by aking useful articles, though we may ll grieve that the noble craft of the eelwright should be at such extremity. e problem is, no doubt, one not easy solution, and there is perhaps no sub- tute for the ingenious native quality old village craftsmanship. Yet some od may come out of it all, if it leads better to appreciate the quality of d craftsmanship, and so promotes further use. But we fear that without at changes of outlook in the life of nation we can hardly expect to do re than touch the fringe of the pro- m. No doubt the Rural Industries reau and the Rural Community ncils are alive to the danger of "artiness," and the departure from traditional methods, which gave such charm to the modest products of the village. At the same time the increased sales arising out of new adaptations of local industry may enable the country worker to carry on, and we cannot but wish success to the work of the Bureau.

Additions to the Tate Gallery.

A further generous offer has been made by Sir Joseph Duveen to complete the Modern Foreign Gallery at Millbank, for foreign sculpture, and so public-spirited an act will be much appreciated. The interests of sculpture, which does not in this country occupy the place it should, may thus be promoted, much to the advantage of the nation. The present opportunities for the sculptor's art are, from want of appreciation of his noble art, very much less than for the art of the painter. We can think of good work done by sculptors—and the very fine work being done by women sculptors must be included—for which there is no adequate scope to-day. It is not in art galleries only, but in the cities, homes and gardens of our country, that there is need for more familiarity with the art of the sculptor. In a sense there is no garden complete without statuary of some kind.

Ancient Frescoes.

We can welcome the interest shown in the art of past times, and the find of ancient wall paintings, such as those recently uncovered in the church of Ashby St. Legers, reminds us of our ancient inheritance and the wealth of its traditions. There would seem, in fact, no end to the resources for this sort of discovery, nor of the means to provide for their protection when discovered. We are not less interested in these moribund and fragmentary survivals that we wish the interest was greater for the work of our own time. The interests of the antiquarian seem to occupy so much more important a place than the interest to forward similar production to-day; to become our bequest to posterity. It is easier to look back than to look forward, easier to appreciate the past than to promote the possibilities of our own time, and we tend to neglect the one for the other. To preserve is important, to create is even more so, and we should like to see some of the enthusiasm, now so often squandered on the shadowy survivals of ancient times, bestowed in enriching our own life. And the courage required for this is much greater, for it is less the want of artistic ability than the neglect to use it from which we suffer, nor should it be thought that the antiquarian interest in these battered old fragments of wall painting was any sufficient alternative to the forwarding of beauty to-day.

Middle-class Houses, Hilversum, Holland
M. J. Van Laren, Architect.

GENERAL NEWS

Professional Announcement.

Mr. Frederic Towndrow, A.R.I.B.A., has been appointed as full-time teacher in architecture at the Regent-street Polytechnic.

Architect's Estate.

Mr. Frederick Stead Brodrick, of Scalby, near Scarborough, late Diocesan Surveyor of the Diocese of York, who died on April 23, aged 79 years, left £18,715 (net personalty £18,377).

Lincoln Churches Threatened.

Two of Lincoln's old churches, St. Benedict's, a mediæval building, and St. Peter's-at-Arches, built by the Corporation in 1724, are threatened with demolition so that the City Council's schemes for wider roads may be put into effect. It is believed, however, that the Corporation will give time for reconsideration before they proceed to deprive Lincoln of two such historic buildings.

New Post for Sir Frank Baines.

Sir Frank Baines, who has retired from the position of Director of Works at the Office of Works has been appointed consultant to Imperial Chemical Industries, Limited, on all architectural and constructional matters. This appointment will not necessitate the abandonment of the voluntary work in connection with the preservation of historic buildings and old cottages.

Extension of Leeds University.

The authorities of Leeds University announce the receipt of an anonymous gift of £100,000 towards their appeal for £500,000 for the purpose of development and extension. Excluding this donation the fund now stands at £300,554. This is the largest individual gift ever presented to the University, and is earmarked for the new library buildings, which will form the most important feature of the extensions.

Regional Survey of Warwick.

A summer vacation regional survey meeting, promoted by the research organisation, which has its offices in Leplay House, London, is to be opened at Warwick. The object is to study the town and the surrounding district in its physical, social, and historical aspects, and to discuss the methods by which a regional survey, on the lines of those which have already been carried out by Leplay House in other parts of the country, can be undertaken in this neighbourhood.

The New Lambeth Bridge.

Works in connection with the Southern approach to the new Lambeth Bridge, to be constructed to the west of the existing structure, is now proceeding rapidly. The building of the bridge itself, however, is at present in abeyance, and no date can be given for the commencement of the operations, which are expected to extend over several years. The new approach will necessitate the raising of the roadway level near Lambeth Palace, and the re-laying of the tramway-lines slightly to the south.

Preserving the South Downs.

In order to save at least one sector of the South Downs from the clutches of the haphazard bungalow-builder, the Corporation of Brighton have acquired a tract of land on which town planning is to be carried out on a scale extensive enough to contain two more Brightons. It is to be hoped that this will preserve what is left of that sadly mutilated triangle of Downland bounded by Newhaven, Lewes, and Brighton immune from any further private exploitation.

Architecture in South Africa.

Speaking at a banquet given in his honour by the Transvaal Institute of South African Architects at the Carlton Hotel, Johannesburg, Sir Herbert Baker, who designed the Union Building at Pretoria, said he was very pleased to see the real advance in architecture accomplished in South Africa during his absence. For that, he said, the architects were to be particularly thanked and congratulated. Also to be thanked were their patrons, the people of the country. The architect was the interpreter of his patron, as the latter was of the spirit of the day.

The Banqueting Hall, Whitehall.

The stonework of the Banqueting Hall in Whitehall is being cleaned and, where necessary, repaired under the direction of the Office of Works. The lead protection over the cornice and other projections are being repaired and strengthened, and any decayed stone which may be found is, we understand, to be replaced. In those parts from which the grime has already been removed, the architectural features of the hall are fully revealed, and when the cleansing is finished the building will be restored to its original appearance. About a hundred years ago the building was repaired under the direction of Sir John Soane.

Boar's Hill Estate, Oxford.

Details have been given concerning the sale of the Earl of Berkeley's estate at Boar's Hill, Oxford. The estate, which comprises some 600 acres, has been sold to a syndicate of Oxford business men, whose names have not been revealed. The purchasers are determined to maintain the residential character of Boar's Hill, and although the land will be re-sold in building lots, adequate building restrictions are to be imposed. The Boar's Hill "colony" includes the homes of the Poet Laureate, Sir Frederick and Lady Keeble, Mr. John Masefield, and Professor Gilbert Murray.

The Library, Hilversum, Holland. M. W. M. Dudok, Architect

COMPETITION NEWS

Municipal Buildings, Peterborough.

Peterborough Town Council are inviting designs for new municipal buildings with shops beneath, to cost £166,000 and to be erected in connection with the widening of Narrow Bridge-street, in the heart of the city. Sir Reginald Blomfield has been appointed assessor, and the winning design will be awarded a premium of 250 guineas. It is proposed to widen the street on its eastern side from 30 ft. to 75 ft., with a carriageway of 50 ft. This necessitates the demolition of over 30 shops and a bank, and the cost of compensation and of constructing the main thoroughfare and a back road will be approximately £200,000, towards which the Ministry of Transport has agreed to make a grant of £80,000. Land has been acquired from the Ecclesiastical Commissioners, and a portion of the garden attached to the palace of the Bishop of Peterborough has been acquired for the scheme. The total estimated cost will be about £400,000, and it is hoped to complete the scheme by Christmas, 1930.

COMPETITIONS OPEN.

	Particulars published in "Builder,"	Sending in date.
Municipal Buildings and Business Premises, Herne Bay. Premiums: £150, £100 and £50. Professor A. E. Richardson, F.S.A., F.R.I.B.A., assessor. Apply Clerk to Council, Westminster Bank House, Herne Bay. Deposit of £1 1s. required:	July 8	Oct. 10,
Municipal Buildings, Wimbledon. Premiums: £200, £150 and £75. Mr. H. V. Ashley, F.R.I.B.A., assessor. Apply Mr. Herbert Emerson Smith, LL.B., Town Clerk. Deposit of £2 2s. required:	July 15	Nov. 30.

MEETINGS

Saturday, *September* 10.

Northern Architectural Association.—Joint visit with the Surveyors' Institution to the new bridge at Berwick.

Saturday, *September* 10.

The Institution of Municipal and County Engineers.—Meeting of the Eastern District. At Lowestoft. 11 a.m.

Monday-Thursday, *September* 12-15.

Institution of Public Lighting Engineers.—Annual Meeting and Conference. At Brighton.

Riverside Open Spaces.

The Ministry of Health has approved plans submitted by a number of local authorities who are desirous of preserving as free and open spaces stretches of land alongside rivers in their areas. It has been the policy of the Ministry to encourage this form of town planning, and it is hoped that other authorities in the country may also find it possible to prevent building on the banks of rivers. Schemes of this kind, it is considered, offer the public a three-fold advantage. They form useful divisions between built-up areas; they provide pedestrians with walks which are entirely free from motor traffic; and since riverside land is usually subject to flooding at some periods of the year, it is undesirable for building purposes, and, therefore, cheap to preserve. Except for acquiring the land and opening it to the public, local authorities need incur little expense, for the object of the town-planning scheme will have been achieved even if they stop short of laying out a riverside park.

Lewes Castle.

The proposal of the County Hall Committee to erect new offices in the castle precincts at Lewes has aroused strong opposition, and has at the same time evoked wide interest in the castle and its history. Some notes on the ownership and history of the castle have been reprinted, and a copy will be sent to anyone interested on receipt of a stamped addressed envelope by the hon. secretaries, Sussex Archæological Society, Barbican House, Lewes.

St. Mary's Church, Fetcham, Surrey.

Drawn by Mr. William Harvey. (*See page* 367.)

ELEVENTH INTERNATIONAL CONGRESS OF ARCHITECTS

AUGUST 29 TO SEPTEMBER 4. THE HAGUE, ROTTERDAM AND AMSTERDAM.

THE recent International Congress of Architects, held in Holland, has universal importance, as it marks the resumption of the work of co-operation between the architects of the 26 nations represented on the Comité Permanent International des Architectes.

During the period of the war, from 1914 until this year, the Permanent Committee was in abeyance, and a provisional organisation entitled the *Comité Central des Congrès Internationaux* — formed at the Brussels Architectural Congress of 1923 — had "carried on." This organisation was not recognised by the R.I.B.A., as it was not strictly "International," but merely a group of members of the Allied Powers, excluding Germany, Austria, Russia, Turkey, etc.

Early in the present year a meeting was held in Paris, when, on the proposal of the R.I.B.A. delegate, it was unanimously decided to revive the C.P.I.A. as this committee existed in pre-war days, and to wind up the provisional organisation. In consequence of this decision the Institute subsequently appointed Lt.-Col. Cart de Lafontaine to act as a delegate to the XIth International Congress in Holland, where several subjects of considerable importance to British architects were to be discussed, such as the regulations for international competitions, the legal protection of the title "Architect," the question of artistic copyright, the distinction between architect and contractor, and the tendencies of modern architectural design. All these subjects were very fully discussed at the official meetings of the Congress and (thanks to the ability of the chairman at each of the sessions) unanimous resolutions were arrived at for each of them.

The proceedings opened with a meeting of the C.P.I.A., when it was decided (consequent on the resignation of Monsieur Girault) to appoint Dr. Slouthower, of Amsterdam and the Technical High School, Delft, as President of the Congress. It was also unanimously decided to elect Dr. J. H. Cuypers, of the Hague, as President of the C.P.I.A., MM. Girault, Dewin and Caluwaers as Honorary Presidents, and among the Vice-Presidents also elected were Sir Aston Webb and Sir J. W. Simpson. The British section of the reconstituted Comité Permanent is, therefore, composed of the following members :— Vice-Presidents, Sir Aston Webb and Sir J. W. Simpson; Hon. Secretary, Lt.-Col. H. P. Cart de Lafontaine; Members, Sir Reginald Blomfield, R.A., Sir J. J. Burnet, R.S.A., Sir Banister Fletcher, Mr. H. M. Fletcher, Mr. Howard Robertson, Professor C. H. Reilly, and Mr. Ian MacAlister, Secretary, R.I.B.A.

A number of other questions were discussed and the committee adjourned until Thursday, September 1st.

The opening ceremony took place in the Ridderzaal, when the customary formal speeches by Ministers and delegates were made.

FIRST SESSION.

Chairman : IR. JAN WILLS, B.N.A.

After a brief interval members reassembled for the first business session of the Congress, the subject for discussion being the rather difficult one of international competitions. Lt.-Col. H. P. Cart de Lafontaine made a statement, as delegate of the R.I.B.A., in which he remarked that the Institute had officially recognised the existing regulations for international competitions as settled by the IXth International Congress, which were printed in the Kalendar.

In the case of any international competition for which the conditions were irregular the usual warning to R.I.B.A. members would be published, and their members would not compete.

With regard to any possible alteration in the existing regulations, it might be of interest to members to hear that this question had recently been considered by a joint committee of the Franco-British Union of Architects. Two reports were presented at the last general meeting of the F.B.U.A. The British section held that it would be useless to consider any amendment to the regulations until there was agreement as to the penalties to be applied to members of any properly constituted body of architects, who participated in a "banned" international competition.

The French section were unable to support this view owing to the difference in the code of professional practice, which would prevent expulsion being applied in bad cases.

Lt.-Col. Cart de Lafontaine added that he would like to put forward three suggestions for the amendment of the existing regulations, but that as time had not permitted a discussion of these by the Council of the R.I.B.A., they must at present be considered as expressions of personal opinion :—

(1) That in future international competitions the schemes sent in should be signed by the competitors in the final stage in the case of a competition in two stages.

(2) That all international competitions should be in two stages : (a) preliminary sketch designs and (b) a final stage limited to competitors selected in the preliminary competition, with the addition of one or two architects of known eminence, which would ensure that designs submitted were fairly representative of the best talent in each country.

(3) That it might be an advantage for the preliminary selection by the jury to be conducted in each of the countries concerned, only designs so selected being submitted to the full international jury.

With regard to the results of international competitions on the advancement of architecture this was considered to be doubtful. Competitions limited to British architects were helpful and had raised the general standard of design : they also provided an opportunity for the younger men to achieve the success which their ability merited.

In the subsequent discussion the suggestion that drawings should be *signed* met with general approval, and it was also evident that the necessity for stricter disciplinary measures was appreciated, though the problem of how this was to be achieved was not discussed in detail. Some time was spent in the consideration of a proposal by the Belgian delegates that the Congress should pass a resolution supporting the protest made by the *Société Centrale des Architectes* of Belgium to the Secretary of the League of Nations with reference to the awards made by the jury in the recent competition. It was agreed that the various draft resolutions should be considered by the Comité Permanent, and at the suggestion of the British delegate it was also agreed that all resolutions should be considered at a special session at the close of the Congress.

SECOND SESSION

Chairman: M. J. CALNWAERS (Belgium)

On Tuesday the second session of the Congress was held at Rotterdam, with M. Calnwaers (Belgium) in the chair, the subjects for discussion being the "Legal protection of the title 'Architect' and 'Artistic copyright as applied to architecture."

The proceedings opened with a short address of welcome to Rotterdam by M. Verheul, B.N.A., President of the Rotterdam Society of Architects, in which the speaker referred to the growth of the city as a great commercial centre and port, and explained the plans for the new quarters which were exhibited on the walls of the meeting hall. The Chairman then introduced the first subject for discussion on the agenda, "The Legal Protection of the title of 'Architect.'"

Signor Calabrini (Italy) said that the Italian Government was, he thought, the first which had passed a law protecting the titles of architect and engineer, and both still, had clearly defined the functions of each. Engineers were debarred from practising as architects, a title which is reserved for those who have passed through a full course of special training. The Italian Government had, in fact, accepted *in toto*, the regulations agreed to by the Ninth International Congress at Rome in 1911. Discipline is assured by the condition of compulsory membership of the Syndicate of Architects, which is imposed by law as a condition of practice.

Answering a question by Professor Krebs, a German deelgate, Signor Calabrini said that, broadly speaking, the distinction between the engineer and the architect was that the engineer was purely technical and the architect was an artist. It was impossible for any building to be erected in Italy except under the direction of an architect.

Senor Bellido (Spain) said that he rose to correct an error in the statement of his Italian friend: In Spain the architect had been protected by law since 1870, which gave full recognition or protection to the architect.

M. Antonescu (Roumania) said that at present they had no law protecting the title of architect, but a draft Bill was now before the Chamber. As a temporary measure their society had succeeded in getting the municipal authorities of Bucharest to refuse consent for any building unless the plans had been prepared by an architect.

Senor Bermudes (Portugal) said that the titles of engineer and architect were both protected by law in Portugal. Infractions were punishable by a heavy fine and a term of imprisonment not exceeding two years; this Act had since been somewhat modified as it was found to be unduly severe in some hard cases. The diploma was necessary before the title of architect could be obtained, but exemption was granted to certain foreign architects in practice in Oporto and students trained in recognised schools abroad.

School Building, Hilversum, Holland. M. W. M. DUDOK, Architect

M. Thomer (Hungary) and M. Katych (Yougo-Slavia) gave some details of the measure of protection and technical training in their respective countries. Professor Krüger (Germany) said there was as yet no legal protection for the title of architect in Germany. Their proposal was that the titles of architect, engineer, and town planner should all be separately protected.

Delegates from Czecho-Slovakia, Austria, and Switzerland said there was no legal protection for the title of architect in their respective countries.

M. Caluwaers (Belgium) said that in Belgium there was a divergence of opinion among architects on the subject of legal protection for the title: some held that it was first necessary to reform the system of education, and others thought the draft law protecting the title of architect was a more urgent matter.

Finally a draft resolution was agreed to, expressing the opinion of the congress that the title of architect should be protected by the State in all countries, and that qualified architects should be free to practise in any country in which the title of architect was protected.

Artistic Copyright.

A short discussion then took place on the subject of artistic copyright as applied to works of architecture, introduced by M. J. M. Poupinel (France), general secretary, C.P.I.A. It appeared that the only country in which works of architecture were specifically protected by a recent Act (May 31, 1927) was Portugal.

Signor Annoni (Italy) objected that there might be a danger that any act of the kind proposed might deprive architects of a certain amount of publicity, which, as they could not advertise, would be a hardship.

It was finally agreed that the resolutions passed at the Geneva Convention should be supported. This concluded the business of the second session.

(To be continued.)

CORRESPONDENCE

[While we are glad to publish letters on professional and other matters of interest to our readers, it must be understood that we do not necessarily endorse the remarks of correspondents, who will oblige us if they will express their views as briefly as possible.]

Sir John Simpson and the R.I.B.A.

Sir,—The new President and Council having taken action which obliges me to relinquish either my self-respect or my membership of the Institute, I have naturally decided to retain the former.

It is with immense regret that I leave a society in which I have the privilege of counting so many friends, and for which I have done not inconsiderable work.

I wish it nothing but good.

I am, Sir,
Your obedient servant,
John W. Simpson,
Past President.

(See Editorial Comment on page 376.)

The Temple Church, London.

Sir,—A few days ago I visited this church and was surprised to find masons cutting out the shafts of jambs of the west door. Yesterday (September 1) I was passing the church again, and found that two complete shafts had been hacked out on the north side and one on the south side, besides a piece of the external walling of the porch, which was cut away. There may be some good reason for all this, but it is not obvious to the casual observer.

It would be interesting if someone who knows why this has been done would state the reason. The shafts were not in a dangerous or decayed condition, and it seems deplorable that they should have been removed on any reason whatever, when one remembers the historic importance of this most entrancing place.

William Davidson, F.R.I.B.A.
Edinburgh.

Shoring during Building Operations.

Sir,—Having had considerable experience of structural alterations to old properties in London, I agree with your correspondent's article, "Shoring during Building Operations," and should like to make a few suggestions towards improving the existing state of things.

In no case whatever in my experience has any definite system of shoring been specified in the contract. The clauses usually being: "Provide all necessary shoring" and "Take all precautions against damage to adjoining properties." This means that for these items the estimator allows a provisional sum, which is, as a rule, quite speculative. The prices for this item in one list of tenders I remember varied from £20 to £95 for the same work. Therefore, other things being equal, the contract will go to the tender allowing £20 for the item. In the event of dilapidations being more extensive than at first thought, and more money being necessary for shoring, the contractor claims an extra, and in a number of cases obtains it. This is obviously very unfair to the other contractors tendering for the work. The architect whose attention is called to the need for additional shoring is never able to take the responsibility of refusing to have it done.

The work is then usually put into the hands of the general foreman, who decides on what shoring is in his opinion necessary and informs the contractor as to his requirements, who approves or otherwise, always bearing in mind the amount of money allowed for this item. The work is then put in hand and carried out, but the whole of the designing has been done by the general foreman, who, although in most cases a competent man, is not an expert engineer. It shows the great ability of these men that there are so many difficult jobs carried out without a hitch.

I have found that few architects understand a great deal about shoring, and I have come across cases where the district surveyor was also at sea. In the case of a very dangerous and dilapidated party wall, I remember a consultation by six persons, *i.e.*, two architects (one for each party), a civil engineer, the district surveyor, the contractor and the general foreman, all of whom approved of the general foreman's suggestions, which were ultimately carried out. The presence of all these persons was necessary to give weight to the foreman's proposals, which involved an expense of over £200. Needless to say, this job was an extra to the contract; had it been otherwise, chances might probably have been taken in order to approximate the contract item of £30 for this work.

In my opinion, an expert who thoroughly understands the principles and theory of shoring should be appointed by the L.C.C., and his sole duties should be the approval and supervision of all shoring works in progress in London. No shoring should be erected without his sanction, and no work where shoring is likely to be necessary should be commenced without his approval. An appropriate fee could be fixed for his services, as in the case of district surveyors, and he should have the necessary powers to compel adjoining owners to allow the fixing of temporary shoring on their property at immediate notice if necessary. This would at once fix the responsibility of all parties.

W. Tolley.

Standardisation of Bricks.

Sir,—I enclose copy of a letter I have addressed to the R.I.B.A., in the hope that it may cause a move to be made. I should be grateful if you would make your comments when publishing it. It is time a lead was given by architects, who have abandoned the class of brick which was in favour when the "sizes" were settled and the recollection of which is still firmly associated with those sizes, as defined. Of course, we want variety of bricks, but we want to get right away from the standard that is associated with those very red facings beloved by the builder and by many architects, which often defy the weather to mellow them. I believe that a full and revised definition by the R.I.B.A. would go far to improve bricks and brickwalling everywhere. Nathaniel Lloyd.

[Copy.]

August 29, 1927.

The Secretary,
Royal Institute of British Architects,
9, Conduit-street, W.1.

Sir,—For some time it has been in my mind to write you with reference to the "Standard Sizes of Bricks" set out on pp. 604-6 of the R.I.B.A. Kalandar. These only deal with sizes, but my experience (and the experience of many others) is that, by implication, they actually set up bad standards in other respects.

The R.I.B.A. Standard of Sizes of Bricks was settled 23 years ago (the addition made eight years ago applied only to thickness), and I do not think that any conference in which architects were included would now be content with such an incomplete definition for bricks. The most that can be said for the "Standard Sizes" is that they apply only to common bricks—usually unsuited to face work—but this is not stated.

In view of the increasing popularity of brick as a building material, both for face work and for internal work, I venture to suggest that the time is ripe for a more complete definition of what architects regard as "good bricks" for both purposes. This should embrace form, texture and colour as applied to bricks for various purposes. Such a guide would certainly be helpful to the brickmaking trade in endeavouring to meet architects' requirements, and would seem calculated to advance materially that better standard of general building which we all desire.

I might continue by outlining the ground to be covered by the suggested new and more complete definition, but this would be better threshed out by any committee dealing with the matter to which most of the points would naturally occur.

I am, Sir,
Your obedient Servant,
Nathaniel Lloyd.

A brickmaker puts it thus: "We are ready to turn out the bricks if architects will settle what they want." In short, an authoritative lead is wanted.

(See Editorial Comment on page 376.)

Foundations of New Buildings in London.

Sir,—The problem of dealing with the foundations of heavy commercial buildings and the like will in time become so pressing and important that I expect to see a new branch of the consulting engineers' profession gradually establishing itself to deal with it. Men will, I think, break away from their present lines and specialise in this work only: it is too complex for a general practitioner, be he structural engineer or architect.

The foundations of all important buildings in New York are looked after by specialists.

E. G. T.

The Faculty of Architects and Surveyors.

The Faculty of Architects and Surveyors has removed from 25, Old Buildings, Lincoln's Inn, W.C.2, to 18, Gordon-square, W.C.1. The new premises provide for committee room, council chamber, lecture hall, administrative staff, club room, and library.

Tests of Building Stones and Preservatives.

Specimens of Portland, Bath, Hamhill, Longridge, Anston, and Stancliff stone, several treated with different preservatives, have been placed on the top of a Government building in Whitehall, where they are carefully examined at intervals by Government experts. Some specimens are untreated, and tests are also being carried out on selected specimens of decayed stone.

ARCHITECTURE IN DALMATIA.—I

By MARTIN S. BRIGGS, F.R.I.B.A.

For obvious reasons, Dalmatia seldom forms part of the architectural student's tours of study and discovery. He rightly concentrates in the first instance on those great masterpieces of his art that are scattered so bountifully in Italy on the opposite side of the Adriatic; and it must be admitted that the architecture of the Dalmatian towns is, for the most part, second-hand Italian of a provincial type. Nevertheless, it has long attracted the attention of architects, and especially of English architects, since the days when Robert Adam crossed over from Rome to Spalato in 1757, accompanied by the famous French architect and antiquary, Clérisseau, and by two draughtsmen, to measure Diocletian's palace. Although he was arrested as a spy during these operations—(as the present writer was, many years ago, when harmlessly pursuing the study of Baroque in the "Heel of Italy")—Adam and his helpers contrived to collect in five weeks all the vast mass of material subsequently published in book form in 1764 as *The Ruins of the Palace of Diocletian*. The publication of this monumental tome seems to have been largely instrumental in creating his reputation and his subsequent practice, for it appeared at a time when architects relied heavily on dilettante nobleness for patronage. Rather more than a century later came Sir Thomas Jackson, who made three visits to this coast, accompanied by his wife, and then wrote the remarkable work in three volumes, *Dalmatia, the Juarnero, and Istria* (Oxford, 1887), which still remains the chief authority on Dalmatian architecture, and has hardly been superseded as an account of its history and customs.

A modern English architect making this pilgrimage is therefore treading in the footsteps of famous predecessors, and he will find conditions of travel much improved since their day, while, if he provides himself in advance with Horatio Brown's *Dalmatia* (A. and C. Black, 1925), and purchases Hartleben's *Handbook of Dalmatia* (English edition) on arriving at Spalato, he will glean a few essential facts about the province. My own visit in the spring of this year was a somewhat more serious affair, involving the delivery of three lectures on Dalmatian history and architecture to a party of more or less earnest students of all ages, and served to convince me that there is no part of Europe whose record provides a more tangled complex of opposing tendencies. Greeks and Romans, waves of barbarian hordes of every kind from the East, Crusaders and Saracens, Venetians and Hungarians and Turks, Napoleon and the English Fleet, finally the soldiers of the Great War, have all fought among these fiords and islands beside the blue Adriatic, and out of this welter of nationalities there has grown up an architecture that is predominantly, though not precisely, Italian. In these brief articles I propose to describe the prevailing conditions in Dalmatia as they appear to an English visitor, noting especially such changes as have occurred since Sir Thomas Jackson's book appeared.

At that time, only forty years ago, the whole coast from Grado (west of Trieste) to Cattaro, a matter of nearly 400 miles, belonged to Austria; while the hinterland, Bosnia and Herzegovina, which for ce

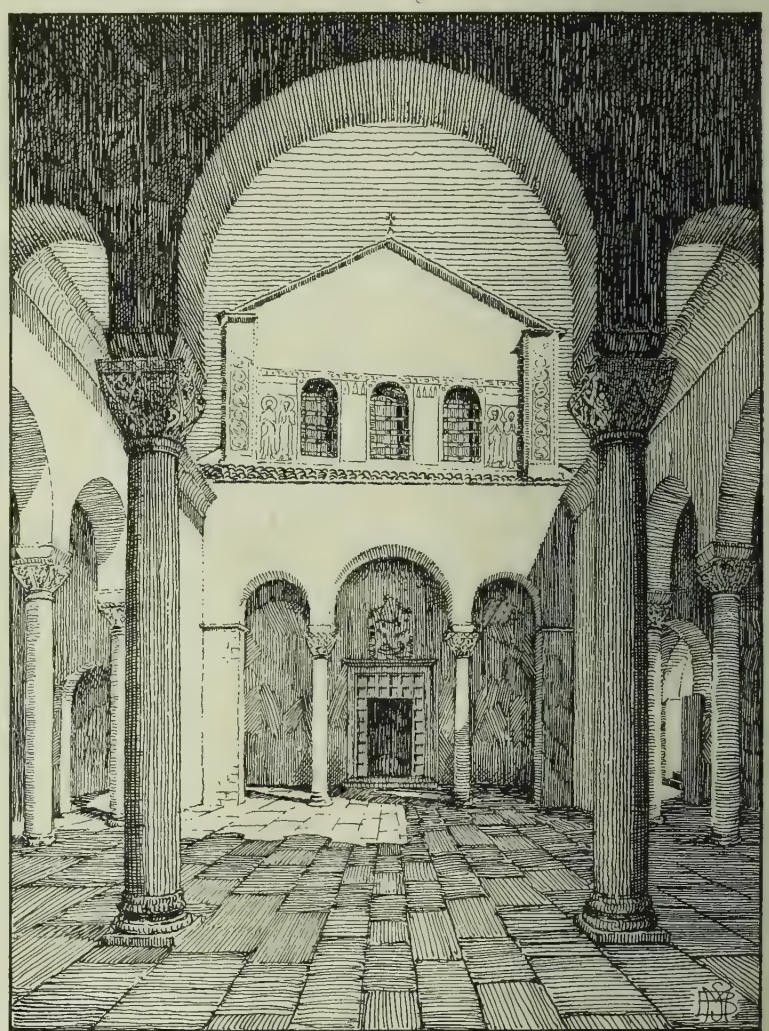

Fig. 2.—**Parenzo. Atrium of the Cathedral.**
Drawn by Mr. M. S. Briggs.

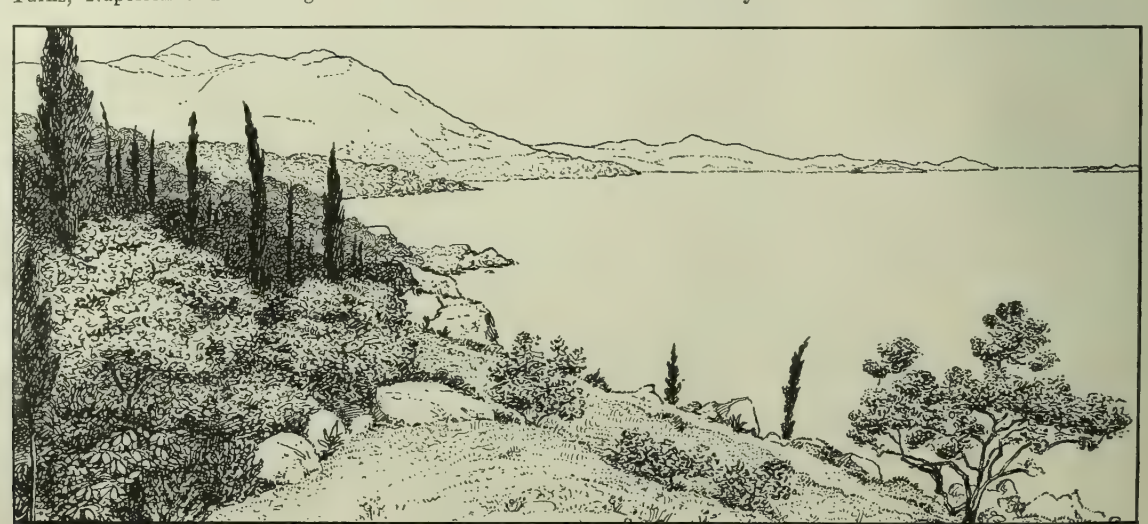

Fig. 1—**A typical view on the Dalmatian coast, south of Ragusa.**
Drawn by Mr. M. S. Briggs.

ries had been under Turkish domination, d been occupied by Austrian troops for me ten years. Beyond lay the new coun- ies of Serbia and Montenegro, only just ee from the Turkish yoke. Nowadays iere is no Austrian territory on the Adria- c: the land from Grado to Fiume, includ- g Trieste and the Istrian peninsula, be- ngs to Italy; and from Fiume to the lbanian frontier extends the coastline of ie large and powerful new State of Yugo- avia, which has absorbed Serbia and Iontenegro, as well as the pre-war pro- inces of Bosnia and Herzegovina. These anges affect the present-day traveller in ore ways than one. He has to face the ustoms barriers between two not very iendly States, and he has a choice of rival eamship lines, Italian and Yugoslav, which range their services in a way which is not ways helpful. Thus, he must take a re- rn ticket, if he wishes to save expense, one or the other, and cannot then return the rival service. He will probably de- re to visit Zara, Spalato and Ragusa—the ree chief towns on the coast—but he may d, as I did, that if one travels by a ugoslav boat it is practically impossible to sit Zara, which is now an Italian town. s regards language, though in Yugoslavia e Slavonic tongue is now used officially erywhere, most educated people in Dal- atia also speak both Italian and German irly well, but English and French are re.y understood. To travel in reasonable mfort, a slight knowledge of Italian or erman is almost essential, even on board ip. In Spalato there are tolerably good tels, in Ragusa the accommodation is uite up to date, though somewhat limited amount; and elsewhere one can rely on lequate meals, though I have no know- dge of the hotels beyond this, but the hotel Sebenico appeared modern enough to it even an English taste. The steamers both nationalities are well equipped and aworthy. The people of Dalmatia are leasant as well as picturesque folk, fre- uently garbed in their national costume, nd there seemed to be nothing to prevent tourist from wandering in solitude about ie country, sketching and photographing s the fancy took him. The scenery is a urious blend of Mediterranean brilliance nd Norwegian ruggedness, for the moun- ins in most places come down to the sea, hile at Ragusa (see fig. 1) one could nagine oneself on the French or Italian iviera.

There are cruises *de luxe*, which include almatia, tourists then sleeping on their at every night and making a few excur- ns into the hinterland (*e.g.*, to Cettinje m Cattaro) by motor-cars; but for the chitect who wishes to sketch, or at any e to do his sightseeing at his own pace, normal method of approach is overland Trieste, and thence down the Adriatic steamer. Trieste contains practically no torical architecture of the first rank, the ef ancient monuments being the rambling cathedral of St. Giusto and a fragment a Roman arch. But it is a remarkably modern city, all built in stone, and its er-front far surpasses those of Naples Genoa in being open to the sea, with untidy wharves and sidings to block view. Presumably this is due to Aus- n rather than Italian organisation, but at rate it is inspiring to the eye of a town- nner. South of Trieste lies the Istrian nsula, containing the two famous towns Pola and Parenzo, the former containing an and the latter Byzantine relics. The or to Dalmatia will find it difficult to k his journey at either port, but it is ible on certain days of the week to el, as I did, from Trieste to Parenzo by st boat one evening, returning to Trieste following afternoon the same way or very slow train. Parenzo is a small, pact town of Roman origin, standing on ninsula, with two main streets inter- ng at right angles in its centre. It contains some Roman remains, a few Venetian windows and balconies, and a really excellent new hotel. But its fame rests on the "Eufrasian Basilica," the magnificent sixth-century cathedral which still forms one of the finest examples extant of a Byzantine basilican church, for it retains its *atrium* (see fig. 2), and its beautiful interior

Fig. 3.—**Parenzo. Interior of Cathedral, showing the Baldacchino.**

(figs. 3 and 4) has hardly been altered since it was first erected. A number of monographs, some of them large folios, have been published in various countries describing the features of this cathedral, and Sir Thomas Jackson's book includes a fairly full account of its fabric. Compared with churches of similar type that I had seen at Ravenna, Torcello and Damascus, it appeared to me singularly complete and singularly restrained in colouring. The grey and white of the interior, save for a Baroque chapel that one need not look at, is only broken by the gorgeous mosaics of the apse, which gain in emphasis by this surrounding reticence. Both they and the external mosaics have been restored. My sketch shows the *atrium*, looking towards the west doorway of the cathedral. The gable over the narthex has been recently restored, but without detriment to the effect, and the curious obliquity between the bottom of the gable and the top of the arcade parapet should be noticed. At the time of my visit (April, 1927) workmen showed me some very interesting mosaics that are now being uncovered on the north of the church. These are relics of the third-century basilica that preceded the present building, which contains several similar mosaics. (It is necessary to obtain a *permesso* to sketch in this church, or in any other Italian monument under the care of the State, from the Office of Ancient Monuments at Trieste.)

The Roman antiquities of Pola have frequently been illustrated. In my next article I will briefly describe Spalato and its famous palace, and some less familiar towns of Dalmatia.

Architect's Estate.

Mr. John Thomas Henthorne, J.P., of Shaw, Lancashire, architect, left estate of the gross value of £5,515, with net personalty £1,947.

Tate Gallery Extension.

Sir Joseph Duveen has made a further offer to complete the Modern Foreign Gallery at Millbank, which was opened last year by the King, by building an additional gallery for modern foreign sculpture, for which there is at present no adequate accommodation. His offer has been accepted by the Lords Commissioners of His Majesty's Treasury and by the Trustees of the Gallery, and the building will shortly be erected on the vacant site at Millbank, behind the present galleries, which was reserved by the Government for further extensions.

Exhibition Hall Scheme, Salford.

The scheme for the erection of a Trades Exhibition Hall and other buildings on the site of the Salford Cattle Market in Crosslane has been advanced another stage, it is reported, by the execution of the agreement between the Corporation and Mr. Morris Margolis, of Farrar's Buildings, London, barrister-at-law. We understand that plans are in course of preparation by Mr. Robert Atkinson, of London, and Mr. Charles Swain, of Manchester, who have been appointed architects of the buildings. Sir Evan Owen Williams will act as consulting engineer in connection with the whole scheme.

The New Residence Palace, Brussels.

An article on this great new block of flats, for which M. Michel Polak is the architect, appears on p. 396.

New Building for the Egyptian State Telegraphs and Telephones, Cairo.

This building, which was officially opened by H.M. King Fouad shortly before his visit to England, was designed to accommodate the whole of the administrative offices of the Telegraphs and Telephones Department, and to include a manual telephone exchange of 6,000 lines (with space for extension to 8,000 lines) and a large telegraph instrument room and public telegraph and telephone call offices. The total cost, including everything except boundary walls and telegraph and telephone apparatus, was £E.75,000. The cost per metre cube, measured from basement floor to top of parapet, works out at £E.0.950, or an equivalent of approximately 6½d. per foot cube.

An old sewer runs through the centre of the site of the building, parallel to the frontage, and this had to be preserved, as it is sometimes used for storm water drainage. The building was therefore designed to straddle it, large entrances being arranged at each end of the central courtyard at basement level, thus providing for the entrance and exit of large lorries. The building was planned on the "unit" principle, each bay being three metres in both directions throughout the building.

Pile foundations on the "Compressol" system were employed, the superstructure consisting of a reinforced concrete frame with brick and rubble filling-in. The facings were originally designed to be in artificial stone, but this had to be abandoned owing to the great delay involved in execution. The basement story only is faced with artificial stone, the rest of the facades being in "stucco." To allow for the expansion and contraction of the monolithic frame, expansion joints were provided at two points right through the building, which thus consists of four distinct structures one inch apart.

The roof over the main switch room, which measures 57 metres by 15 metres, consists of steel trusses covered with boarding, waterproof sheeting and tiles, with a curved and panelled plaster ceiling below. The floor of the switch room and of the apparatus room below are of steel joists and concrete, so as to allow of holes being made wherever required for cables, etc., without affecting the strength of the floor. All other floors and roofs are of reinforced concrete. Floor coverings in the offices generally consist of wood boarding, oak parquet being employed in the switch room, apparatus room, telegraph instrument room, and the principals' offices. Corridors are covered with cement tiles, and the basement floors with jointless composition flooring. Windows are ordinary wood casements, with revolving wood shutters, the lantern over the switch room being in Crittall's steel casements opened by special gearing. Three electric lifts, by the Otis Co., of Italy, are installed.

A pneumatic tube installation is provided by which telegrams handed in at the various branch offices in Cairo are sent to the central telegraph instrument room for despatch. Central heating is installed in certain rooms, especially the switch room and telegraph instrument room, where operators are on duty day and night.

The building was carried out under the direction of the State Buildings Department, Mr. Maurice Lyon, D.S.C., F.R.I.B.A., being the architect, and Abd el Razzak Nosseir Bey the general contractor.

Bush House Extension.

Mr. Irving Q. Bush proposes to extend Bush House, Aldwych, by adding a wing on either side at a cost of about £400,000. Bush House will finally have a frontage of 430 ft. on Aldwych. Plans are being prepared by Messrs. Helmle, Corbett and Harrison, of New York, whose London representative is Mr. H. Rogers Houchin, F.R.I.B.A., Bush House, W.C.2. We reproduce this week a drawing showing the proposed new elevations to Aldwych.

New Flats, Baker Street.

We illustrate this week the new block of flats which is to be erected over the Metropolitan Railway at Baker Street Station on a site extending along Marylebone Road from Upper Baker Street to Madame Tussauds, with counterbalancing frontages in both Upper Baker Street and Allsop Place. It will contain nearly half a million square feet of floor space, and comprise nearly 200 suites of high-class residential service flats, ranging from a ten-room mansion flat to a five-room bachelor flat, with a special unit of 30 separate bedrooms for the use of maids. In addition to this, the building will embody a banqueting hall and ballroom, a restaurant, hairdressing saloon, etc. The building will cost nearly £750,000. Approximately 40 passenger and service lifts will be installed; numerous postal chutes will be provided on each floor, and a private water supply will be drawn from 500-ft. deep artesian wells.

The walls and floors of the building will be fire-resisting. The flats throughout will be heated by radiators supplied by hot water under forced circulation, and each flat will be equipped with automatic telephone. The rentals of the flats will be approximately £200 to £1,000, inclusive of rates, service, etc. Another feature is the provision of a general emporium with two acres of floor space.

The building has been designed by Mr. C. W. Clark, A.R.I.B.A., the railway company's architect, and his staff, and the steelwork by Mr. A. E. Wilson, the company's engineer, and his staff. The contractors are Messrs. Higgs and Hill, Ltd., and Messrs. Gleed, Sons and Co. are the quantity surveyors. Messrs. Lambourne and Co., Ltd., will supply constructional steelwork, and Messrs. C. Isler and Co. will be responsible for the artesian wells.

The County Fire Office, Piccadilly Circus.

The elevations of this building to Piccadilly Circus were built in accordance with the designs of the architects appointed by the Crown. This has determined the general lines of string-course, windows, and cornice of the rear elevation, here illustrated; but the aim has been to keep the character of this elevation as quiet as possible, as befitting the less important side of the building. Thus the projection of the cornice is very much less, and the windows are set somewhat flatly in the wall, with slightly recessed architraves with rounded arrises. The three arched openings light the large banking-hall on the ground floor. On each side of them are doors giving access to staircases of the insurance office.

Messrs. Ernest Newton, R.A., and Sons are the architects, and Messrs. William Woodward and Sons associated architects.

The Manor House, Thames Ditton, Surrey

This house is built in an old garden, wit local bricks, well varied for colour. Th upper part is tile hung, and the gable, porc etc., are in solid oak timbering. The ro is covered with sand-faced hand-made tile All joinery is in oak, and the windows a lead glazed in diamond panes.

Mr. T. Frank Hawkes, F.R.I.B.A., is t architect.

Cottage at Westham, Sussex.

This cottage, built at an approximate co of £820, has hollow external walls render and finished with an uneven surface. Th timbering around the front door, etc., is English oak; "Coverwell" tiles form the ro covering, and the metal casements and leade lights were supplied by Messrs. Georg Wragge, Ltd., of London and Manchester.

Messrs. Underdown and Duke, of Seafor were the architects.

Birmingham Civic Centre Competition.

We published in our issue for August 19 the first premiated design in this competiti as well as that which was awarded the fir supplementary premium. We now give productions of the design submitted Messrs. Nicol and Nicol, FF.R.I.B.A., Birmingham.

The plans have been designed to take f advantage of the opportunities rendered ava able by the extension of the centre of Bi mingham, utilising the important areas a joining the Municipal Buildings now on occupied by obsolete canal wharfs, and ve dilapidated property. In preparing t scheme the aim has been to produce a pl the main lines of which conform to the exis ing main lines of traffic, and which is natural development of the City as it exist rather than an academic design ignoring t existing main lines and features.

The new Civic Square is therefore plann in conformity with Broad Street, the ma existing artery from east to west, and this axis are planned the central group buildings which will be built in the ne future, viz. : the City Hall, extensions of t Municipal Buildings, Library, Museum, et A connection has been shown between t shops in New Street through Paradise Stre and by means of a shopping centre to Bro Street on the south of the Civic Square.

The arrangement of the Greater Memor Building as a centre to a rectangular gard space containing the Hall of Memory not or adds to the importance of each, but sugge that the new City Hall, being the most i portant building in the group, should occu the centre of the municipal group with t Municipal Offices on the right-hand side a the Educational Buildings on the left-ha side, and in the rear reserved sites for ot public buildings.

The south side of Broad Street from e to west and facing north to the larger closed area containing avenues and gard will present a facade of commercial bu ings from the site of the existing Britan Insurance buildings, the new Masonic Ro remaining undisturbed, and on the cen line facing the Municipal Hall the L Mayor's mansion with its garden grou to balance the Masonic site there is a sible site for the head offices of the Munic Bank or other such building, and furt west still in Broad Street other sites shops, warehouses and offices. At the no west corner of the enclosed site there is a large area allotted for permanent exhibit and an isolated site for an opera house.

The disposition of the streets and spaces near the Town Hall and the irregular outlines of the existing building point to the necessity of removing almos the properties lying between Easy Row the Town Hall, including those fronting ward down Paradise Street and towards Row and replanning them with building harmony with the new surroundings.

Certain old buildings would have to b moved, but it is not proposed to dis Government buildings such as post offices offices, etc.

New Residence Palace, Brussels : Ground Floor Plan. M. MICHEL POLAK, Architect

THE NEW RESIDENCE PALACE, BRUSSELS

The remarkable activity and enterprise shown in the building industry in Belgium furnishes striking proof of the wonderful recovery that country has made from the disasters of the Great War. Perhaps the most convincing evidence of this post-war recovery is to be seen in Brussels, where one of the finest residential buildings in existence has been recently constructed. This palatial building, which is known as The Residence Palace, will do much to overcome the housing problem so far as the shortage affects the families of the better-class of business men, and the middle-class generally.

The Residence Palace does not attain to the high degree of English comfort, but so far as convenience is concerned, the best American ideas have not only been copied, they have been much improved upon; and in fairness to the designers and owners, it must be admitted that comfort has by no means been overlooked.

The spacious building is indeed an innovation. It is a compact, miniature city. Located in its three immense blocks are the following:—850 separate suites of apartments, having the necessary sanitary and other accommodation; a bank; post office; theatre; swimming bath; restaurant on the ground floor; summer restaurant and dancing hall on the eleventh floor; tea-room; The Residence Palace Club, this being arranged after the manner of the best London clubs; a garage and repair establishment for 200 motor-cars—the roof of the garage forming an "en-tout-cas" tennis court; a banqueting hall, seating over 600 persons, this hall being available for public and private functions; a gymnasium; a fencing school; a small hospital on the seventh floor; and a mortuary.

For the convenience of those occupying the apartments, the following business premises are within the building:—Grocer and provision merchant; baker and confectioner; fishmonger and poulterer; chemist; florist; tobacconist; newsagent; bookseller and circulating library; hairdresser and manicure; photographer; and a bar open to residents and their friends, and to members of the club.

An enterprising Belgian, M. Lucien Kaisin, conceived the idea of constructing this extensive, imposing, and self-contained building; and to him is mainly due the successful financing of the project. The buildings were designed by M. Michel Polak who was formerly a student at the Ecole des beaux-arts, Paris; as also was his chief assistant, M. Michel Hoch. The exterior is designed upon classic lines, but due to the economic condition of the country making money rather scarce, the only ornamental features incorporated in the elevation are "un bandeau couronnant le rez-de-chaussee" (a projecting band of ornamental stonework at the level of the ground floor ceiling) and "une frise sculptée, fine et discrète" (a sculptured frieze, not too prominent, nor too heavy) at the height of the seventh floor.

The exterior is of artificial stone, with the exception of the pillars in front of the main entrance, these being of natural stone. The main portions of the interior are constructed of reinforced concrete, brickwork being used in those places for which it is the most suitable, such as the construction of chimneys and the setting of boilers. There are three blocks of buildings, all connected by underground passages. One block consists of separate quarters for bachelors. The total area covered by buildings and approaches is nearly four acres, the buildings alone covering an area of 15,650 sq. yards. From the ground level to the roof of the eleventh floor the total height is 164 feet.

Owing to underground springs, considerable difficulty was experienced in connection with the foundations, but success was achieved by using 2,400 "Franki" reinforced concrete piles, these being driven into the subsoil to depths varying from twenty to sixty feet. The piles are arranged in groups, the upper ends of each group being united by a solid block of concrete four feet thick, the result being a pile-supported monolith on which the foundations proper find a solid bearing. Over 78,000 cubic yards of concrete were used in the building; of that total 33,800 cubic yards were reinforced, for which purpose 2,500 tons of steel were used. The total amount of cement used was 16,500 tons.

Of the 850 suites of apartments, 160 are flats for families, these flats being planned in sixteen different styles. The larger flats have twenty rooms with nine bedrooms, the servants' bedrooms included. There is also a servants' bathroom. The smaller flats consist of a living-room, a bedroom, a small kitchen, and a bathroom. There are 560 bathrooms, each having a bath, lavatory basin, and w.c. The bathrooms of the larger flats have also a bidet. Eight hundred lavatory basins having hot and cold water supply have been installed, one being fixed in each bedroom that does not connect directly with a bathroom. All kitchens have a glazed fireclay sink, the wall at the back of each sink being made clean and hygienic by white glazed tiles. A noticeable feature connected with the kitchens, which are as extensive as those of a large hotel, is the system of ventilation. A thorough air-change is accomplished by means of a double ceiling, one section serving as a passage along which the incoming fresh air travels, the other section serving as a passage for the outgoing vitiated air. A separate fan installation controls the kitchen ventilation. All the cooking is done by coal gas, which first passes through compressors. No solid fuel is used.

An up-to-date mechanical system of ventilation has been installed in the main building. Two electrically-driven fans connected to sheet metal ducts 3 ft. 3 in. sq. draw air in from the open atmosphere and force it through cleansing chambers, and also through a battery of tubes. Hot water circulating through the tubes warms the air during the winter months. During hot weather, cold water circulates through the tubes, the result being that the air is made cool and pleasant. Twenty-four exhaust fans fixed on the upper floors discharge the vitiated air above the roof. An interesting method has been adopted for ventilating the cupboards intended for the storage of dry food such as bread, and foods of like nature, as distinct from meat, fish, milk, etc. The outer course of bricks around the chimney flues forms a number of small ventilating shafts, each brick having several vertical passages through it, which form updraught ventilating flues, the lower ends of which connect with the cupboard, the upper ends discharging just below the oversailing masonry forming the chimney head. This ventilation of dry food cupboards is certainly a step in the right direction.

With the exception of the cooking stoves and the boilers, there are no fireplaces in the building. Radiators are installed in the various apartments, to warm them in cold weather, the necessary heat being supplied by six tubular-shaped boilers set in brickwork. Each boiler has 1,190 square feet of heating surface. Three boilers will furnish more than sufficient heat for all purposes in the most severe weather, the others standing in reserve in case of breakdown. All six boilers can function with solid fuel, but as a safeguard against a temporary shortage of coal, three boilers are also fitted with oil burners, these being suitable for a crude non-refined petrol known as "Mazout."

In the central control room is a temperature recording instrument having a travelling pointer; this instrument is in electrical communication with each floor throughout the building, and also with the more important apartments such as the restaurant, theatre, club and banqueting hall; by operating a number of very small switches, the recording instrument will indicate the temperature in the apartment or section of the building with which the switch corresponds.

Englishmen will be interested to learn that British skill and enterprise have been respon-

New Residence Palace, Brussels: A Bathroom.
M. Michel Polak, Architect.

sible for some of the most important installations in the Residence Palace. The whole of the drainage, plumbing, hot and cold water supply, fire protection, and gas installations were planned and carried out by the English firm, Messrs. Perry and Bayley, of Paris and Brussels.

Three main drainage outlets discharge into the city sewers, each outlet having an intercepting trap, with a fresh-air inlet on the building side. The soil and waste pipes discharge into separate stacks, the waste stacks discharging beneath the grating of a trapped gully. Trap ventilation pipes are connected near to the fittings. Drinking water is supplied throughout the building, from the city mains. During the excavations, many springs of water were tapped. This water is all conducted into a large concrete reservoir just below the level of the basement, but clear of the building; it is then pumped to another concrete storage cistern on the eleventh floor, from which it supplies all the sanitary fittings throughout the building. This water possesses a high degree of purity, it is also less hard than the city water.

All the sectional mains and circuits of the hot and cold water supply installations are controlled by valves situated in the central control room at basement level. The valves are fixed behind marble panels, the nickel-plated wheels projecting in front of the marble; this gives to the control of the water supply a neatness and compactness similar to that of a marble switch-panel in an electricity generating station. The various pumps start and stop automatically in accordance with a low or high water level in the storage cisterns. In case of shortage of water, or of water overflowing and running to waste, an electric bell rings, and a red lamp is electrically illuminated on a marble panel, by which means the engineer-in-charge knows that something is out of order.

The drainage of the garage is arranged in a manner that prevents oil and petrol from being discharged into the city sewers. The total cost in English money of the sanitary, hot and cold water supply, fire protection, and gas installations, including the machinery for compressing the gas, amounted to £86,000. The water in the swimming bath is continually undergoing purification by filters and chlorine treatment, and as the abundant supply of spring water permits of frequent refilling, the contents of the bath are always practically pure.

The building has eleven main staircases, nine staircases for the use of servants, fifty lifts—a number being express lifts which ascend at a speed of 6 ft. 6 in. per second. There are numerous small dinner lifts, by means of which meals may be sent up from the restaurant kitchens, if the occupants do not wish to prepare their own food on various occasions.

There is ample evidence of the exercise of considerable skill in connection with the electric lighting, which has been arranged so that it is in perfect harmony with the furniture and decorations. There are 260 miles of wiring in the various electrical installations. As many as 1,200 workmen were engaged upon the building at one time. The total cost of the Residence Palace amounts to £800,000. The building stands in a select quarter of the city, and within a fortnight of the opening many of the largest and best apartments were let.

New Kent By-pass Road.

The North-East Kent Joint Town-Planning Committee has provisionally approved of a cheme for the construction of a by-pass road n Watling-street from a point between Cobam and Strood to Rainham, including the rovision of another bridge across the Medway at Temple Marsh. The scheme, which is estimated will cost about £1,500,000, as been approved subject to a detailed surey which is now being undertaken by the cal authorities of Rochester, Chatham, and illingham, and subject also to financial conderations.

FETCHAM CHURCH

Like so many other parish churches in England, the church of St. Mary at Fetcham, Surrey, contains work of a great many periods from before the Norman Conquest to the present day. One of the most interesting features is a small splay-sided window high up in the south wall of the nave. This has stuccoed jambs and semi-circular arched head built up with tile-like Roman bricks taken from some former building in the district, where Roman remains are plentiful along the line of the gap in the North Downs, where the River Mole enters the Thames Valley.

That this fragment of the original building should remain aloft supported by late Norman arches and pillars erected about the year 1150 might seem strange if the daring methods of underpinning adopted by the Normans were not well known. The preservation of the roof and the wall tops of an early church while the lower parts of the walls or piers were undergoing alteration or even rebuilding was a problem that the primitive builders often faced and successfully solved. To insert new Norman pillars and arches instead of an old solid wall was probably no greater tax upon the constructional resources of the time than the insertion of a bressummer is now. A gap would be made for each new pillar, and, when they were safely built, the new wrought voussoirs would be inserted one by one in chases cut in the two faces of the old wall. Once the voussoirs were all in place and pinned up hard to the work they were intended to carry, the remaining portions of the old wall, which had served as "centres" to these arch rings, would be demolished in their turn. The new arcade would then be complete except that the soffits of the arches between the two lines of wrought facings would still be rough core and would be finished with lime stucco.

The use of old walls as centres for new arches and the preservation of superstructures persisted for centuries as a tradition of economical building construction, and even quite small fragments of early work were sometimes considered worth saving by these means. In the ruined fragments of the central tower of Rievaulx Abbey the same practice seems to have been adopted, for Norman small-stone masonry is still to be seen above the haunches of the early English springing of the inserted arch. At Exeter Cathedral, too, the pair of Norman transept towers were opened up to the interior of the church by the introduction of large arches under their inner walls. At Fetcham the risks attending these underpinning works are hinted at in the curious bending of the wall as a whole, and of the Norman columns, composed as they are of small stones and wide mortar joints surrounding a rough rubble core, doubtless provided by the material of the demolished wall. A certain amount of patching and some hair cracks testify to the slight deformation that goes on from year to year and century to century in the old circular shafts.

This transformation of an outer wall into an arcade between the old nave and "new" aisle was accompanied at Fetcham by the provision of a tower whose lower story served as a south transept and now contains the organ. In the corner of the tower adjoining the pulpit some stone steps still remain to show how access was obtained to the rood loft through an opening, now blocked up, at the level of the capitals of the Norman pillars.

Another blocked-up opening which may have been intended to give additional opportunities for viewing the ceremonies at the altar exists in the corresponding north jamb of the chancel arch, though in this case the curve of the arched head suggests that it was built in the Early English period.

Opposite the Norman arcade of the nave stands an arcade of two arches rising from a slender octagonal shaft of "Decorated" character; a singularly inappropriate name in this instance, since the pier and arches are devoid of decoration and appear somewhat meagre compared with the many-lobed Norman capitals on the other side of the nave. Spanning the nave is a fine oak roof of trussed rafter type with plastered strips between rafter and rafter and between the vertical ashlar timbers which help to support the rafters and bring their pressures safely on to the inner side of the walls. That no risks of overturning should be incurred, a pair of stout tie-beams were also provided to deal with any lateral thrusts which might escape the partial triangulation of the rafter trusses.

The thirteenth century chancel also contains evidence of many alterations, of which the Perpendicular east window is one. The wooden roof, more complex than that of the nave, is also less effective in direct proportion to its elaboration. The absolute disregard of the successive builders for the style of the earlier craftsmen is remarkable throughout the little church. The Normans planned their arcade in such a manner that the older window stands lopsidedly between the haunches of two of their new arches. The "decorated" arcade makes not the slightest pretence of matching the Norman arcades opposite even in the number of piers and arches. The inserted windows frankly ignore the character of the building they serve to illuminate.

With all these incongruities of detail the sum total of architectural effect remains charming in spite of certain hardnesses of texture and colour provided in modern restorations and additions.

Smooth monotonous areas of neat stucco and highly polished oak in screen and pews do their worst to combat the delightful naïveté of the old work and show how little the atmosphere of the building has been considered in recent repairs. It is, however, to the care of successive restorers that we owe the preservation of so much that is genuine, and if the introductions of recent years fail to do complete justice to artistic harmony, they are infinitely to be preferred to the more drastic form of so-called "restoration" which destroyed all vestiges of ancient art.

THE ORDERS OF ARCHITECTURE*

The late Mr. Phené Spiers's dissertation on the Greek, Roman and Italian Orders of Architecture first appeared in print in 1890. The publishers state in a note to this, the fifth, edition, that when the time came for the fourth edition to go out of print, Mr. Spiers had passed away, but that he had left a number of revisions for the text with the publishers, and these have been incorporated in the present impression, in which the *List of Selected Works* has also been corrected and expanded down to date. The author compiled this standard text-book mainly as a help to architectural students and probationers at the Royal Academy and the R.I.B.A., the Councils of both bodies requiring the production of drawings and setting-out of the Classic Orders in their due and proper proportion as initial tests. The case is much the same with the elementary classes of the A.A. Doubtless all students are well aware of these requisitions and will welcome this new and improved edition of an invaluable text-book. Quite apart from all this, the author's notes on the origin and development of the Classic Orders will interest professional and layman alike. It is quite helpful to get a clear conception of how the great classical forms in stone grew naturally and unconsciously out of the timber post and lintel constructions of the primitive builders, this applying strictly to the Doric and Ionic, which developed coevally, whilst the Corinthian was a thing apart, developing in a time when the Doric and Ionic had reached their culminating forms and were already on the decline. The origin of the Corinthian Order is still in dispute, as the author says, and we can well leave the student to the pros and cons of the various theories which he will find in this work. There are twenty-six plates, of which the majority are of Orders drawn to scale, with an explanatory text to each plate.

* "The Orders of Architecture." By R. Phené Spiers, F.S.A. (sometime Master of the Architectural School of the Royal Academy). (B. T. Batsford, Ltd.) Large quarto (15 in. by 11 in.). Half cloth, 12s. 6d. net.

May we appeal to our correspondents to submit their queries on paper of a size easily filed, and written as legibly as possible, or, better still, in typewriting?—Ed.

Road Subsidence; Ownership of Drain.

Sir,—A matter of legal liability arises between the owner of some premises facing a public road and the public authorities as to that portion of the drain from the premises between the intercepting chamber and the public sewer. A subsidence has occurred in the road near the footpath, without letting down the surface of the road, and this subsidence is immediately over that portion of the drain in question. The authorities say that it is due to the bad condition of this drain that the subsidence has been caused. The question of the ownership of the drain is not raised—we think it is established that it belongs to the owner of the property; also, we believe he is responsible for it.

Now comes the question raised by the owner's solicitors, which is—How is it possible for the owner to find out if the drain is in a good condition or bad condition as time goes on? It is under the public footpath and roadway, and he cannot open it up periodically to examine it. This being the case, they say the public authority cannot come down on the owner and tell him that through his negligence he has let the drain get into a bad condition and therefore he is liable for the subsidence. Can you give us a ruling on this point and state any cases dealing with such?

We may say that the owner has not yet rebutted the authority's allegation that the drain is the cause of the subsidence—but he has the right to say that the subsidence caused the drain to become broken; it will be most difficult to prove this, probably not possible.

Surveyors.

Overlooking Windows.

Sir,—I am one of a number of householders whose gardens at the end abut on to a factory wall, all the overlooking windows of the factory, which were existing when we bought the property, being glazed with obscure glass, and only a small area opening, bottom hung inwards (this, I believe, being an agreement with the adjoining owners when the factory was built).

A month or so ago several of these windows overlooking our gardens were enlarged and new metal casements fixed, some of which are glazed with ordinary glass, and all are vertically centre-hung. These are thrown open during the daytime, leaving the whole of the opening unobstructed to the view of the factory hands over our gardens, etc. Apart from this, when these windows are open, the casement leaf overlaps into our property by about 1 ft. 6 in.

If, for example, there was a right of way alongside this wall, this overlapping would certainly not be allowed.

Are we, as adjoining owners, entitled to claim that these windows should all be glazed of obscure glass, and that they should all be kept closed; or that casements which only open bottom-hung inwards should be fixed in, thereby keeping the property private and also terminating the obstruction of the 1 ft. 6 in. over our ground?

S. S.

Dampness in Floors.

[Reply to "T. H." August 5.]

Sir,—In your issue of August 19 a letter under this heading has, by what is presumably a printer's error, been attributed to me, unless it so happens that you have another contributor with the same name and initials as myself. I notice also a letter signed "Restoration" commenting upon the suggestion I made in your issue of August 12, also under the above heading. I would like to point out that my sketch showing a horizontal damp-proof course, formed above the level of the existing dampness in a 4½ in. partition wall, was intended to apply only where it is necessary to render such walls with waterproofed cement *on both sides*.

My experience confirms your contributor's view that the vertical rendering of waterproofed cement applied to one face of a wall without a horizontal damp-proof course, and taken to a height of 3 ft. above where the dampness previously showed, is sufficient to prevent any further evidence of dampness upon the face of the wall thus treated. In exceptional cases that sometimes occur, where a thin internal wall is built of very porous materials, without a damp-proof course, and stands upon extremely wet ground, the application of a waterproofed cement rendering to *both* sides of the walls does increase the capillary attraction, and makes it desirable either to carry the renderings on both sides up to the entire height of the room, or to adopt the simple suggestion made in my original reply. Incidentally this correspondence provides a reply to "Architect," who inquired in your August 19 issue concerning a satisfactory alternative to cutting away for and inserting a horizontal damp-proof course in damp old walls.

L. E. Walker.

[Our correspondent of August 19 was another Mr. Walker whose initials, owing to a printer's error, were confused with those of our present correspondent.]

Road Construction.

[Reply to "Drysite," August 26.]

Sir,—I presume that "Drysite" is interested either as a building owner or a builder. It is not clear to me why the local authority have sewered and are now kerbing, unless they are completing the roads after development.

It is not necessary that the kerbs should be laid at the same level. The kerb at "B" could have been nearly 9 in. lower than at "E," if so desired, or there need not have been any filling at "A," but this would have increased the amount of excavation and the cost of construction, and this point was no doubt the determining factor in the design.

Enil.

Silver Grey Facing Bricks.

Sir,—A client desires as a facing brick silver grey facings as sometimes specified for H.M. Board of Works. Can anyone give me particulars of these, approximate cost, and where they can be obtained? H. E.

Damp Course.

Sir,—With reference to this correspondence, "Restoration" is right in saying that about 3 ft. is the height that surface damp in a wall is apt to climb, but there is an important point to watch, i.e., if you make a waterproof surface by waterproofing compound or similar means up to 3 ft., the damp then seems to climb higher, and it is well to go a good foot or so above where damp is showing. Once Caught.

Local Authority and Strip of Freehold Frontage.

Sir,—Could you give me any information which would define the position of a person under the following circumstances:—

"Mr. X" is the freeholder of about half an acre of orchard and cultivated land attached to his residence and bounded by a main road between two provincial towns. The property is situated between the business and residential parts of one of the towns and the adjacent land extensively built on. The local Town Council, in order to carry out a scheme for widening the road at a blind corner skirting the above property, wish to acquire a strip of the frontage of "Mr. X's" land to the extent of about 4 ft. in depth.

(a) What powers, their derivation and limits, are the Council vested with for acquiring private property under the above circumstances?

(b) Can such acquisition be enforced, and, if so, upon what basis is compensation arrived at, and to whom, in the event of disagreement, is appeal made for arbitration?

K. P. D.

Hanging Church Bells.

[Reply to H. B., September 2.]

Sir,—Sturgis's Dictionary of Architecture gives a very clear detail of the bell cage at S. Jean Baptiste de Belleville, which your correspondent may find instructive. According to this detail, which seems to be traditional, the timber work is built in at the bottom only, and all the superstructure thereon stands free, to avoid tortion in the masonry. Student.

Dados for Cinemas and Theatres.

[Reply to J. P., September 2.]

Sir,—A form of dado for these purposes, and of growing popularity, is the asbestos sheet veneered with hard wood. This is fireproof, and some very handsome effects can be obtained. Samples have been steamed and boiled without separating the veneer, and the life of the material should be practically everlasting. 20th Century.

CLEANING WESTMINSTER ABBEY

Under the superintendence of Professor Lethaby and Mr. E. B. Tristram, a process of cleaning is being applied to certain portions of Westminster Abbey, more especially those in which there is good reason for believing the existence of colour in former days. To-day it is possible to picture to oneself, however faintly, the distant time when the interior of Westminster Abbey was literally ablaze with colour—a spectacle compared with which its present appearance would seem dull and dreary to a degree. The first work to be taken in hand, says a writer in the *Manchester Guardian*, was the three Sanctuary Tombs on the north side of the high altar, which, till recently, resembled so many pieces of elaborately carved oak. After many months of careful work, carried on with infinite patience by a practised hand, the varnish applied to their surfaces (probably by Christopher Wren) has been removed, together with the accumulated dirt and grime of generations, and the original colours stand, to a great extent, revealed.

Suspended on the spandrels of the beautiful arcading of the walls of the north and south choir aisles are a number of shields of graceful design, all possessed of deep historical interest. Like the three Sanctuary Tombs, their colours had virtually disappeared from view, engulfed, as it were, in dust and dirt. To-day, to a great extent, those colours stand before us in their original beauty.

Another splendid piece of work which has also been taken in hand is the Chantry Chapel of John Islip, the last of the great builder-abbots of the Abbey. It is decorated with carved representations of the Abbot's arms, his name, and, still more interesting, his rebus. This latter forms a kind of pun on the name Islip, and consists of a slip of a bough and a little man in red breeches slipping therefrom. Till recently these quaint devices were hardly noticeable, and the existence of any colour upon them was unknown. To-day they stand revealed in all their original charm.

With regard to Torrigiano's gates to Henry VII's chapel, with the aid of some specially devised solution, the solid incrustations of years are in process of disappearing, and once more are the great gates appearing with all their old brilliant sheen. The above, says the writer, are only samples of the really remarkable work which is steadily proceeding at the Abbey. In a few years' time the interest of the old building, simply as a result of this careful process of scientific cleansing, will be enhanced by at least 50 per cent.

THE BUILDING TRADE

BOUNDARIES, FENCES AND TREES—VI.

In our last article we were considering the bilities of owners of trees to adjoining ners or to members of the public on the ghway, but there is another aspect of the nership of fences and trees which remains be touched upon, viz., the statutory obli tions as regards fences and trees bounding highway. Section 72 of the Highway Act 35, makes it an offence wilfully to obstruct e free passage of any highway.

In Gully *v.* Smith (1883, 53 L.J.M.C. 35) e appellant was the tenant of land bounded a highway; the highway ran in a cutting d the soil of the appellant's land was sup rted by a retaining wall. There was no dence who had built the wall, but the ap lant had repaired it. It was badly con ucted and in a wet season a portion of wall fell and the soil it retained fell the highway causing a dangerous obstruc n. Notice had been given to the appellant the road authority to remove this obstruc n, but he failed to do so. The magistrates victed the appellant of an offence under Act, and the conviction was upheld on peal. The Court held that the acts of air afforded evidence of ownership and t the appellant, having been repeatedly uested to remove the obstruction and ing failed to do so, was guilty of wilfully tructing the highway notwithstanding his ing done no positive act to cause the ob ruction.

t may here be noted that apart from ligence it appears that where an obstruc has been caused in the highway there o obligation on the owner of the land or ee under sections 65 and 72 of the High Act, 1835, to light that obstruction or to n the public. This appears from the case son and Another *v.* Bray (1917, 1 K.B. *The Builder*, January 19, 1917). re a tree had fallen across a high in a gale of great violence, which found by the County Court judge mount to an act of God, so all element egligence was absent as regards the fall of the tree. The defendant, the tenant farm on which the tree grew, knew ad fallen at about 10.30 the next morn and at about 2 p.m. the road foreman he County Council informed him that ust remove the obstruction. The defend had sent two men, who worked with the nan at the tree, but the removal was effected that day and took four days to plete. The plaintiffs, driving along the at 5 p.m., collided with the tree and ined personal injuries and damage to car, and brought this action alleging gence in the defendant in not having re id the tree or given warning, and the ty Court judge had given judgment for laintiffs on the ground of negligence in ng the tree even for a short time with e to give warning. A Divisional Court sed this judgment, holding that although efendant might have been liable under n 72 of the Highway Act, 1835, for ly obstructing the highway if he had to remove the tree within a reasonable after having been called upon to do so e surveyor of highways, yet no obliga was imposed upon him by the Highway ither to light the tree or to warn per passing along the highway of the ob on. We should, however, hardly re end our readers to neglect to take such aution on the strength of this decision. mere fact that trees are suffered to ct a public footway was held in Walker rner (1875, I Q.B.D. 4) not to consti n offence under section 72 of the High ct, 1835, but there are statutory reme or this. Thus section 65 of the High ct, 1835, provides that if the surveyor hink that any carriageway or cartway is prejudiced by the shade of any hedges or by any trees (except trees planted for ornament or for shelter to any hop garden ground, house, building, or courtyard of the owner thereof), growing in or near such hedges or other fences and that the sun or wind are excluded from such highway to the damage thereof, or if any obstruction is caused in any carriageway or cartway by any hedge or tree any Justice of the Peace may summon the owner (which by section 5 includes the occupier) to show cause why the hedges are not cut or the trees not lopped, and an order may be made that this shall be done, and, in default, penalties are incurred and the surveyor may do the work and the expenses may be recovered from the owner or occupier.

This section only applies where the trees or hedges prejudice the highway by their shade or form an obstruction, but it has recently been supplemented by section 23 of the Public Health Act, 1925, which provides: "Where any tree, hedge or shrub overhangs any street or footpath so as to obstruct or interfere with the light of any public lamp or to endanger or obstruct the passage of vehicles or foot passengers or to obstruct the view of drivers of vehicles the local authority may serve a notice on the owner of the tree, hedge or shrub or on the occupier of the premises on which such tree, hedge or shrub is growing, requiring him to lop or cut the tree, hedge or shrub within 14 days, so as to prevent such obstruction or interference, and, in default of compliance, the local authority may themselves carry out the requisition of their notice, doing no unnecessary damage and may recover summarily as a civil debt the cost from the owner or occupier."

In the case of main roads maintained by a County Council, the powers conferred by this section are to be exercised by the County Council (subsection (2)). By subsection (3) any person aggrieved by any requirement of the local authority or County Council under this section may appeal to a petty sessional court within 14 days after the service of the notice.

This section, it will be seen, applies to trees, hedges and shrubs, but walls, fences and hedges are also dealt with in section 4 of the Roads Improvement Act, 1925. Subsection (1) of this section empowers the Minister of Transport or any County Council or other highway authority, where they are of opinion that it is necessary for the prevention of danger arising from obstruction to the view of persons using the highway to impose restrictions with respect to any land at or near any corner or bend in a highway maintainable by him or them to serve a notice:—

(a) Upon the owner or occupier of the land directing him to alter the height or character of any wall (not being a wall forming part of the structure of a permanent edifice), fence or hedge thereon so as to cause it to conform with any requirements specified in the notice, or (b) upon every owner, occupier or lessee of the land restraining them either absolutely or subject to such conditions as may be specified in the notice, from permitting any building, wall, fence of hedge to be erected or planted on the land.

There are certain provisos as to buildings, and then subsection (2) provides that any restriction imposed under the section while in force shall be binding upon the successors in title to the owner or occupier of the land unless he can prove that when he became owner or occupier he had, after making due inquiries, no reasonable cause to suspect that any such restrictions were in force. We may here interpolate the observation that such restrictions now require registration under the Land Charges Act, 1925 (see section 15, subsection (7)), therefore to prove ignorance, a search of the register would be necessary. It is to be noticed that under subsection (4) compliance with the requirements of a notice is not to be restricted by anything contained in a conveyance, lease or other agreement.

By subsection (3), if a person objects to comply with any requirement contained in the notice or objects to any restriction he can state his objection in writing to the authority by whom the notice was served within 14 days after receipt of the notice, and thereupon the question whether the notice shall be withdrawn as respects any requirement or restriction shall be determined as in the Act provided, that is if the parties so agree by a single arbitrator appointed by them, or, in default of such agreement, by the County Court (see section 9). By subsection (3) of section 9 the arbitrator or the Court can modify the order, requirement or restriction.

By section 4, subsection (5), the person served with a notice may consent to the Minister or other authority doing on his behalf anything necessary for complying with the requirements of the notice, but by subsection (6), subject to the provisions of this section, a person served with a notice and failing to comply with the requirements of the notice or acting in contravention of the notice shall without prejudice to any other proceedings which may be taken against him be guilty of an offence and liable on summary conviction to a penalty not exceeding £5, and any person so convicted shall within such time as the Court may allow do all things necessary to conform to the requirements and restrictions imposed by the notice, and if he fails to do so shall be deemed to commit a continuing offence and shall be liable on summary conviction to a penalty not exceeding 40s. a day for each day on which such failure continues.

By subsection (7) the person served with the notice shall be entitled to recover from the Minister or other authority any expenses reasonably incurred in carrying out the directions contained in the notice, and any person sustaining loss in direct consequence of any requirement, or proving that his property is injuriously affected by any restrictions, if he makes a claim within six months after the service of the notice may recover from the Minister or other authority.

From the wording of the subsection it appears that this time limit is not imposed where it is sought to recover expenses incurred, but only where there has been direct loss or injurious affection, but all these questions are to be determined as indicated above under section 9 by a single arbitrator agreed upon by the parties or, failing such agreement, by the County Court.

It would be an omission in referring to the statutory provision relating to highways if we neglected to call attention to an Act which we think is often overlooked, the Barbed Wire Act, 1893, as of late years an unusual use has been made of barbed wire. Section 3 of this Act provides: Where there is on any land adjoining a highway within the county or district of a local authority a fence made with barbed wire or in or on which barbed wire has been placed and such barbed wire is a nuisance to such highway it shall be lawful for such local authority to serve notice in writing upon the occupier of such land requiring him within a time therein stated (not to be less than one month or more than six months) after the date of the notice to abate such nuisance. If he fails to comply with such notice the local authority can apply to a court of Summary Jurisdiction, and such Court, if satisfied that the said barbed wire is a nuisance to the highway, may by summary order direct the occupier to abate such nuisance, and on failure on his part to obey the order the local authority may do what is necessary in execution

of the order and recover the expenses incurred in a summary manner.

By section 4, where the local authority are the occupier of the land proceedings may be taken by any ratepayer in the district.

By section 2, "barbed wire" means any wire with spikes or jagged projections, and the expression "nuisance" to a highway "as applied to barbed wire" means barbed wire which may probably be injurious to persons or animals lawfully using the highway. It appears to be optional to the local authority to put this Act into force, and they do not appear to be sufficiently active in the matter. From the above definition it is obvious that barbed wire adjoining a highway must be a nuisance, especially to dogs, and besides this statutory provision the use of it lays the occupier liable to action. Apart from the statute there appears to be a civil right to recover damages. In Stewart *v.* Wright (1893, 9 L.T.R. 480), the plaintiff was walking along a footpath when a gust of wind carried his coat against the fence and it was torn. No negligence in the erection of the fence was imputed, but it was held by the County Court judge that the fence was dangerous to the public and a nuisance and the plaintiff was entitled to recover damages.

THE INSTITUTE OF BUILDERS

Following is the list of successes in the 1927 Licentiate Diploma Examination of the Institute of Builders:—

A. Ayres, Rishton.
S. H. Baker, Hove.
W. J. Bennett, Ealing
H. Botsford, Hertford
J. A. Bowen, St. Helens.
S. D. Brand, London.
H. J. Brownjohn, London.
C. E. Carter, London.
T. Caulfield, St. Helens.
E. G. Cheek, Penarth.
A. K. Clark, Tewkesbury.
L. H. Clarke, Stroud.
S. Cleaver, Prescot.
C. G. Cottle, London.
N. V. Cox, Heanor.
R. E. Crewe, London.
T. Croft, Preston.
T. P. Dallow, West Bromwich.
W. F. Dobson, Brighton.
J. N. Duggan, Abergavenny.
G. B. Eckton, Blackburn.
E. R. Ellingham, Welling.
W. D. Freeman, Sutton.
W. W. Fussell, Southampton.
G. G. Gentry, Richmond.
L. J. Gillham, Portslade.
H. V. Gough, Wolverhampton.
I. A. Grant, Dundee.
S. J. Hale, London.
J. W. Haunton, London.
J. J. Hayes, Bristol.
F. Hughes, Westcliffe.
H. Jackson, Chesham.
S. G. Jackson, Southend.
J. H. Johnstone, Reading.
J. W. Jones, Burnley.
A. G. Keeble, Chesham Bois.
W. E. Kelsey, Sheffield.
W. J. Lacey, Hounslow.
L. E. Lowe, Bournemouth.
E. G. Miles, Uxbridge.
G. A. Mills, Bilston.
K. F. Mottram, Birmingham.
R. G. Norman, London.
L. J. Pollard, Stevenage.
R. G. Prebble, London.
A. W. Radford, Nottingham.
S. Rhodes, Bradford.
W. S. Roscoe, Earlestown.
H. J. A. Rudolph, London.
W. A. Sharp, Keighley.
G. F. Symes, London.
R. W. Triggs, London.
H. J. B. Tufton, London.
R. H. Webb, London.
D. J. Williams, Aberystwyth.
W. A. Withers, Bradley-Bilston.
T. Withnell, Leyland.
R. H. Wood, London.

Football Stand, Moseley.

Moseley Rugby Football Club propose to erect a stand on their ground at the Reddings, and a modified scheme has been approved by the local magistrates. Mr. J. A. Harper is the architect.

L.C.C. REPORT ON HOUSING AND RENT RESTRICTION

Through the courtesy of the Clerk to the London County Council we have before us the Joint Report of the General Purposes and Housing Committees of the London County Council, to which the Minister of Health particularly referred when announcing the intention of the Government to continue Rent Restriction as it is, for a further period of one year, and it is an impartial and carefully considered document. The Report, in the first place, contains interesting figures as to the construction of houses and flats in Greater London during the years 1920-1926, and we append the table:—

Houses and Flats Provided by

	LOCAL AUTHORITIES				Housing trusts and public utility Societies.	Private enterprise (houses of all classes).	To
	L.C.C.,	City Corp. and Met. B.C.	Outer London local Authorities.	Total.			
1920	268	169	712	1,149	59	1,434	2,
1921	851	2,059	6,799	9,709	312	2,906	12,
1922	5,497	2,096	4,465	12,058	530	4,319	16,
1923	1,132	525	825	2,482	208	7,578	10,
1924	1,443	360	444	2,247	173	15,021	17,
1925	2,016	805	1,065	3,886	251	19,404	23,
1926	4,669	898	2,735	8,302	466	24,729	33,
Total ..	15,876	6,912	17,045	39,833	1,999	75,391	117,

The Report points out that as regards the 85 Outer London local authorities, over the whole period they have provided little more than the number of houses provided by the Council, whilst in the last three years they have provided little more than half the number provided by the Council. Of the total number of houses and flats (39,833) shown above, provided by local authorities, 27,035 were provided under the Housing Act, 1919; 5,954 under the Act of 1923; 6,267 under the Act of 1924; and 577 were unassisted.

It is explained that the figures for private enterprise relate to houses of all classes, as it is not possible to make any very definite division between working-class and non-working-class houses under this head, for the reason that the rent used to be the test, but very few houses provided by private enterprise are built for letting, nearly all being offered for sale only.

Of the total number of houses and flats erected by private enterprise (75,391), 10,006 were within the County of London; 19,284 were subsidised out of public funds, a State grant being made in 6,445 cases under the Housing (Additional Powers) Act, 1919; 12,814 were subsidised under the Act of 1923; and 25 under the Act of 1924.

As regards the question of Rent Restriction, the most interesting figures are those given in the Report relating to housing progress as compared with the requirements due to increasing population. The Housing Committee reported in 1924 the requirements for working-class accommodation to meet the normal growth of population in Greater London might be computed roughly as 12,500 houses each year. The Report points out that, assuming working-class accommodation to be three-fourths of the total, the number of new houses required each year is 17,000, and this number has been exceeded considerably in the last two years; but taking the number of houses provided in the seven years, the average is only 16,750, or rather less than the estimated number to meet the normal growth of population, and assuming the shortage in 1919 to have been 50,000, there is still a considerable shortage. It is also pointed out that although the estimated proportion of working-class dwellings to others is put at three-quarters, in fact considerably less than one-half of the houses erected have been working-class dwellings. The Report then contains a summary of the provisions of the Acts relating to Rent Restriction, including Part II of the Act of 1923, to which we have recently called attention as affording some safeguards when Rent Restriction is removed, and then comes to the question of the continuation of those Acts.

The Report treats this question remarkably fairly. It recognises that a return to normality in all matters relating to housing is desirable at the earliest date possible, as artificial methods which operate contrary to principles of sound economics and to the laws of supply and demand are in themselves detrimental to the best interests of housing as well as to those of the community generally. It recognises the drawbacks attending restriction; that the fact that the owners are restricted from dealing with their property does throw a burden on the local authorities in the matter of slum clearance and the oversight of properties in a bad condition, for "in the past the principal agent for the removal of insanitary houses and the renewal of obsolete and worn-out houses was the owner." It recognises "that under the protection of the Rent Acts profiteering, sub-letting and overcrowding have assumed proportions that were never contemplated when the Acts were passed, and that the sufferers are in the main those of the poorer classes"; but it is pointed out that at the present moment in view of the house shortage shown above a further displacement of a part of the population might follow the suspension of control and add to the burdens of finding accommodation for those displaced, although, as the Report puts it, it is the matter of choosing the lesser of two evils, it recommends the continuation of Rent Restriction for one year.

The Report, however, points out that the Council's own experience a number of points have arisen under the Rent Acts which call for amendment, and that if any further extension of the Acts beyond December, 1928, should be contemplated by the Government, there would be time before that date for systematic and detailed amendments to be made, and it is suggested that, just as in the matter of new housing a return to normality is being sought by a gradual tapering away of subsidies, so also the Rent Acts might be amended by a graduated policy of relaxation operating at stated intervals.

NEW BUILDINGS IN LONDON

Bermondsey.—Offices.—On a site with the old baths and washhouses once stood in Spa-road, the Bermondsey Borough Council are proposing to erect new municipal offices. The site has been approved by the London County Council, and the sanction of the Ministry of Health has also been received. Messrs. G. Corderoy & Co. are preparing the quantities.

Catford.—Reconstruction.—Under the instructions of the Royal Arsenal Co-operative Society, plans are being prepared for the reconstruction of the Rushey-green branch.

Charing Cross-road. — Premises. — Mr. Charles W. Abrahams, of Wedmore-street, N.1, have just completed the demolition and excavation work at 111, Charing Cross Road, W.C., where new premises are to be erected. Messrs. J. Willmott, of Hornsey, are

builders, and Messrs. Taperell & Haase, of 7, Portland-place, W.1, are the architects.

City-road.—Premises.—With reference to the announcement which appeared in our issue of December 3, 1926, regarding the new premises to be erected for Messrs. Singer, in City-road, Messrs. Ashby & Horner have now secured the building contract. Mr. W. H. Lewis, 11 and 12, Finsbury-square, E.C., is the architect.

Denman-street.—Theatre.—Good progress is now being made in connection with Piccadilly Theatre, Denman-street, W.1. Messrs. Bertie Crewe and E. A. Stone are the architects. The general contractors are Messrs. Griggs & Son, of Victoria-street, S.W.1, and the steelwork is by Messrs. Archibald Dawnay & Sons, Ltd. The Adamite Co. is supplying "Colemanoid."

Dulwich.—Shop.—The Royal Arsenal Co-operative Society, Ltd., are proposing to extend the accommodation of the Lordship-lane branch by adding thereto one further shop, the freehold of which has been purchased.

Lea Bridge-road.—Cinema.—A large super-cinema, with a seating capacity of over 2,500, is to be built on a site adjoining the present Markhouse Cinema, Lea Bridge-road, Leyton, which will be incorporated in the scheme. Mr. George Coles, F.R.I.B.A., of 40, Craven-street, Strand, W.C.2, is the architect. The promoter is Mr. H. Pearl, of the Biograph Theatre, Victoria, S.W.1.

Little Earl-street. — Store. — Messrs. W. Frost & Sons (London) Ltd., are the owners of a site in Little Earl-street, W.C.2, where a new store is to be built. We understand that no architect nor builder has yet been appointed.

Merton.—Enlargement.—The whole of the Royal Arsenal Co-operative Society's premises at 128, High street, Merton, are to be enlarged.

Morden.—Branch.—On a site near the Underground Railway Station, the Royal Arsenal Co-operative Society, Ltd., propose to erect a new branch.

Old Kent-road.—Extension.—The Royal Arsenal Co-operative Society, Ltd., have now completed arrangements for enlargement of their premises at 1, Old Kent-road, S.E.

Peckham.—Shops.—It is stated in the report of the Royal Arsenal Co-operative Society that a building freehold site, at present occupied by three houses, at Nos. 133, 135, 137, Queen's-road, has been acquired and is to be reconstructed to provide a full range of shops.

Peckham.—Extension.—The Royal Arsenal Co-operative Society, Ltd., have entered into contracts under which the Society will obtain possession of four shops adjoining the Rye-lane branch. In acquiring this property the Society will make large extensions to their old premises.

Southall.—Cinema.—Mr. Clifford Aish, of 2, Bedford-street, Strand, W.C.2, is the architect for the new cinema which is to be built at Southall. The cinema will have a seating capacity of 2,000.

Tottenham.—Houses.—Tenders are being invited for the erection of 110 houses and sewerage works in connection with the fourth section of the White Hart-lane housing scheme. Mr. E. C. P. Monson, F.R.I.B.A., of Finsbury Pavement House, 120, Moorgate, E.C.2, is the architect, and the work is for the Tottenham Urban District Council.

Twickenham. — Cinema. — Plans for the "Rialto" cinema are now in course of preparation by Mr. F. W. Kinns, L.R.I.B.A., 14, Broadway, Woking.

Wandsworth-road. — Reconstruction. — To deal more satisfactorily with the development of this site, the Royal Arsenal Co-operative Society has acquired the freehold interest of four houses in Camellia-street, and it is the intention to proceed with the reconstruction of the branch.

Wimbledon-park.—Shops.—A contract has been signed by the Royal Arsenal Co-operative Society for the purchase of four vacant freehold shops and land adjoining in Arthur-road.

MIDLAND BUILDING AND ALLIED TRADES' EXHIBITION, BIRMINGHAM

The second Midland Building and Allied Trades Exhibition—organised by the Birmingham Chamber of Commerce (Inc.)—was opened on Monday at the Bingley Hall, Birmingham, by the Lord Mayor, Alderman A. H. James, C.B.E., J.P. This Exhibition, which will remain open until Saturday, September 17, has as its object the display of the latest developments not only in construction—where there are many new phases to be recorded—but in the allied trades, which are as essential to the builder as the raw materials with which primarily he is concerned. The Lord Mayor, in declaring open the Exhibition, said that the housing problem was not much less acute to-day than it was four or five years ago. In Birmingham, however, they had no reason to regret what they had done, for they might fairly and honestly claim that they were in the vanguard so far as the provision of houses was concerned. Still, more remained to be done, and in that direction the building and allied trades played the most important parts, for without their assistance and sympathetic co-operation, municipalities could hope for but little success. Regarding the Exhibition, he felt that such events were the means of giving impetus to trade by bringing before the public the latest designs in various phases of manufacture and industry. He would declare the Exhibition formally opened. A vote of thanks to the Lord Mayor—proposed by Mr. G. N. Haden, president of the Birmingham Chamber of Commerce—was heartily carried.

The Exhibition this year is a most composite, neat and effective one. Upwards of 70 firms are showing, and the majority of them give working demonstrations, which aid greatly towards effective display. We append some notes on the various products on view:—

Stand 6. H. R. Vaughan & Co., Ltd.—This firm, whose works are at Gateshead-on-Tyne and Preston, show a comprehensive display of the "Sphinx" brand roofing felts and dampcourses, in which they specialise. Four grades are shown of their "Rexoid" pure bituminous roofing, which, we understand, has given splendid results. It is guaranteed waterproof and, being pliable, cannot crack. One of the exhibits—a roof span covered with "Rexoid"—has been exposed to the weather for three years and has lost neither colour nor efficiency. Several types of dampcourses are on view, one of the best being the "Leadcore Bitumen," in which thin sheet lead is combined with a Hessian base, the whole being coated top and bottom with bitumen. We are given to understand that this firm uses bitumen solely and that no tar or any other like waterproofing substance is employed.

Stand 14. Standard Metal Window Co.—Here, by means of an attractive stand, are displayed steel casements, sashes, etc., of every description and for every use. Those contractors interested in the strength and attractive appearance of the metal window should visit this exhibit, where is also to be found a display of wood frames and leaded lights, for use with the steel windows. The works are at Houghton-street, West Bromwich (Telephone: West Bromwich 405), but there are London offices and showrooms at 47, Victoria-street, S.W.1 (Telephone: Victoria 5790)

Stand 17. Midland Joinery Works, Ltd.—This firm, of Burton-on-Trent (Telephone 685), are showing a good selection of wainscot, oak doors and casings, complete with pediment, and entirely British made. Window frames, fitted with steel casements, and specimens of inlaid tops suitable for bar-counters, tables, etc., add to a bright display.

Stand 30. Perkin & Co., Ltd.—This firm are exhibiting their "Rapid" stair housing attachment for spindle moulding machines in operation. This attachment, which sells at a moderate price, is applicable to any make of spindle moulder and, in addition to the rapid production of stair string trenching, will permit of many operations only possible hitherto on overhead routing machines. A pair of 15-rise strings is routed in 25 minutes or less, according to the number of pairs required. We learn that over 500 of these attachments are in use in all parts of the country. Other machines on the stand (mostly under power) include chain and hollow chisel morticer, new type tenoning and scribing machine, 12-in. surface planer, 24-in. band saw, wood trimmer, etc. The works are at Whitehall-road, Leeds. Telephone 27441.

Stand 33.—"Hurry" Water Heater Co.—A type of water heater, the "Dual Purpose," well suited to working-class houses, is on view at this stand. This heater—by means of an ingenious arrangement—may be used either for washing clothes or for giving hot water for the bath on the overflow method. The firm, whose address is 39, Broad-street, Birmingham (Telephone: Central 6026), are also the makers of the "Hurry" geysers and gas- and coal-heated portable coppers for housing schemes. The stand is of particular interest to municipal authorities, many of whom, we understand, have already employed these types of water-heaters on their housing estates.

Stand 36. Drew, Clark & Co.—"Ladders and steps for all purposes" well describes this exhibit, for there are many sizes of their "Diamond" patent extension ladders and patent auto-folding platform steps on view. In addition, there is a display of their more recent device for rapid and economical erecting of scaffolding. This is "Rap-Rig" patent scaffolding, for which it is claimed that it considerably reduces painting costs through its unit system, and speed of erection and its movability. The firm's address is "Diamond" Patent Ladder Works, Leyton, E.10. Telephone: Walthamstow 0458.

Stands 40-42, 64-66. Parker, Winder & Achurch, Ltd.—On stands 40-42, this firm, of Broad-street, Birmingham (Telephone: Midland 2940), are giving a display of concrete and concrete-mixers and equipment. We understand that several of their "Empire" concrete-mixers and some "Excelsior" screening equipment are being used in the Birmingham district, and that inspection of them under working conditions can be arranged. The firm are, we learn, sole concessionaires in the Birmingham district for the aluminous cement—Ciment Fondu. On stands 64-66, Messrs. Parker, Winder & Achurch's "Eagle" patent combination grates are being shown. The grates combine economy with convenience, and are very suitable for the small house. The firm are also showing various manufactures of Messrs. Scott & Simcock. These comprise:—Polished black and white floor tiles, polished surrounds for fireplaces, patent expanded concrete fencing in panels of 6 ft. × 4 ft. high, coloured glazed bricks in concrete, and glazed wall lining sheets for bathrooms, halls, etc.

Stands 38-39. Samuel Smith & Sons, Ltd.—The makers of the patent "Foresight" Range and the new "Foresight" Junior Combination Stove are exhibiting a complete display of modern grates, ranges, etc., commencing with the barless fitment, and showing grates or ranges to meet every need. They are drawing particular attention to the new "D" series of "Foresight" ranges, which show this range as of the closed pattern. Many advantages are claimed for this new model, there being no dividing partition to mar the hob space, and the doors are made detachable, and can be taken off and replaced at will. Notice is also brought to the No. 56 flat tile register as something new and effective in register grates. The address is Beehive Foundry, Smethwick, and

41, Colmore-row, Birmingham. Telephones: Smethwick 400, and Birmingham Central 6060.

Stand 46. Roberts, Glazebrook & Co., Ltd.—This firm, of Tyseley, Birmingham (Telephone: Acock's Green 498), are showing many types and shades of their paints and glazes, one of the most interesting being the "Permoglaze," a liquid glaze for walls, which is shown applied in a practical way to walls, plaster, concrete, ironwork, etc. The hard, tile-like surface demonstrates the usefulness of this product in places where the utmost cleanliness is required. Those interested in the protection of iron and steel structures, etc., will find an appeal in the "Carbolite" metal paint, which is most successful, we understand, in the prevention of rust.

Stands 26, 43-45. Goodman & Co.—On Stand 26, this firm, of Birmingham, are showing examples of general building materials not included on their other and larger exhibit, which is mainly devoted to concrete. They are calling special attention to a new method of securing wooden floors to a concrete base, by means of the "Bull-Dog" floor clip, for which they are the local agents. On their larger stand, 43-45, are shown numerous examples of cast-stone in various textural finishes that have for over two years been exposed to the weather. Various kinds of stucco are also on view, pleasing in texture and character and guaranteed not to crack. "Atlas White" Portland cement also features largely in the exhibit.

Stands 47-48. Horrell & Bowman, Ltd.—This firm has a very good display of "Triplex" grates. These, we understand, are very economical in operation, and, being guaranteed and scientifically constructed, there is nothing to go wrong. There are on display also a number of styles of fireplaces and mantel-pieces suitable for sitting-rooms. These are set with the attractive "Lava Lustra" tiles, which produce a shot effect, the fireplace being framed in mahogany of fine quality and graining. This firm's address is at 508-10, Moseley-road, Birmingham. Telephone: South 1636.

Stands 52-53. The Portland Cement Selling and Distributing Co., Ltd.—Greaves, Bull & Lakin (Harbury Works), Ltd., is one of three producing plants, of which the other two are the Ship Canal Portland Cement Manufacturers, Ltd., and the Holborough Cement Co., Ltd., situated respectively on the Ship Canal and the River Medway. The distributing company for these three plants is the Portland Cement Selling and Distributing Co., Ltd., of 20, Buckingham-gate, S.W.1. The symbol of this service is the "Red Triangle." All three cements can be supplied in 1-cwt. non-returnable paper sacks as ordinary Portland cement or rapid hardening cement, both of which are of the highest and dependable quality.

Stand 55. Simplex Floor Planing and Treatment Co., Ltd.—This firm, whose address is at 7, Finch-street, E.1 (Telephone: Central 6651), has an exhibit of patent electrically-driven machines for planing, sandpapering and polishing wooden floors. These machines can be used on all types of flooring, and the record of contracts satisfactorily carried out—which includes the levelling of the floor of the Inner Temple—is impressive. The machines on this exhibition are under power.

Stand 61. Expanded Metal Company, Ltd.—The exhibit of this firm, of York Mansions, Petty France, S.W.1 (Telephone: Victoria 8809), consists of samples of the company's various products, with photographs of a few representative works carried out on its systems. These products are known by the designation "Expamet," and the "Expamet" expanded steel reinforcement has been used extensively for over thirty years for concrete roads, foundations, paving, etc. Special attention is drawn to the "Ribmet" product for concrete and plaster work, which is a combined reinforcement and centering. The Birmingham representative of this firm is Mr. R. Spencelayh, at Well-lane, Allison-street. Telephone: Central 6795.

Stands 62-3. J. Sagar & Co., Ltd.—The display of this firm—whose works are at Halifax—is a most interesting one. First amongst their exhibits is the new double-spindle recessing machine (A.C.J.), for stair strings. This trenches or recesses the housings in stair strings, as required, in the manufacture of all kinds of staircases. Among the other machines under power are the semi-automatic chain-cutter and hollow-chisel mortising machine (A.C.O.), light type, for all kinds of mortising in hard or soft woods, and the (1Z2) pattern for general mortising in hard or soft woods. On show also is the chain-feed edging and sawing machine (A.C.F.), for ripping and edging boards straight and true at high-feeding speeds.

Stands 67-68. Rowe Bros. & Co., Ltd.—This firm, of Berkley-street, Birmingham, are specialising in high-grade sanitary fittings, grates and ranges for domestic and public buildings, rain-water pipes, tanks, etc., and lead sheets, white and red leads, oils, colours, etc. These are on view, as is also a new method of jointing satisfactorily thin copper tubing by means of a lead-filled joint, which ensures watertightness.

Stand 72.—Scaffolding (Great Britain), Ltd.—This firm are exhibiting their well-known tubular steel scaffolding, which may be used for all exterior and interior work. They have also one section of heavy suspended scaffolding, for use on steel-frame buildings. The units form a continuous scaffold right round the building, and the type of machine shown is the outcome of years of research and practical experience. Samples of "Conform" steel shuttering are also on exhibition, this for concrete retaining walls and centering. While the firm's head office is at 43, Lansdowne-road, Stockwell, S.W.8, they have a Birmingham office at 252, Highgate-road. Telephone: Victoria 187.

Stands 73-74. Celotex Company of Great Britain, Ltd.—A most attractive stand is that of Messrs. Celotex, whose exhibit is in the form of a Pavilion lined inside and out with this product. Celotex is too well known to require description, but it may be recapitulated that it is an insulating building board manufactured from Bagasse—the fibre of sugar-cane. It is, we learn, waterproof, vermin-proof, scientifically sterilised, and inherently durable. The following are among its main uses: Heat, cold, and damp-proof lining for walls and ceilings; sound-deadening; acoustical correction; roof insulation; exterior lining; plaster-base, etc. It has a mat-textured surface which provides an attractive finish when decorated with paint, stain, or distemper; alternatively, it may be left natural, its golden tan colour having a pleasing effect. We understand that production has increased from 12,000,000 square feet in 1921 to 350,000,000 in 1926-1927.

Stand 76. Frederick Parker, Ltd.—This Leicester firm are displaying a comprehensive range of road-making and quarrying plant. Their latest piece of plant is on view for the first time, this being the 10-cwt. "Monarch" hoist and engine. This can be used anywhere, as it is run in conjunction with a 3½ h.p. Lister petrol engine. Features of this machine are the band brake and cone clutch. Among other exhibits is the Parker O.C. mixer. This is a new model of 7 cubic feet capacity, notable for unusual lightness, compactness and rigidity. Power by 3½ h.p. Lister engine. It has an open type drum, having internal blades to ensure "perfect mixing and no grading." The loading hopper is of the accepted Parker design, giving a very light lift. The machine is convertible "on the spot" from side to end loading by a simple operation.

Stand 77. D. Anderson & Son, Ltd.—The main exhibit of this firm—whose factories for the making of the "Red Hand" products are at Stretford, Manchester, and London and Belfast—is the showing of the actual construction of a "Belfast" roof covered with 2-ply "Rok" and having a gutter formed in the felt. The roofing exhibits include "Rok" roofing, which was, we understand, selected for the Australian Government buildings, Canberra. The firm's mineral-surfaced "Rok" and "Rok-Flextile" strip shingles are supplied in strips which, when laid, give the appearance and solidity of slates or tiles. A variety of dampcourses also are on view.

Stands 87-88. Interoven Stove Co., Ltd.—On the attractive stand on which this firm, of 156, Charing Cross-road, W.C.2 (Telephone: Regent 2426-7), are exhibiting their products, cooking demonstrations are given daily with the "Super-Interoven." The exhibit includes "Interoven" and "Super-Interoven" convertible cooking and heating stoves (Pascall's Patents), for cooking all the meals, baking bread and pastry, and giving ample supply of hot water for baths and domestic purposes. It is then instantly convertible from cooking stove to an open-fire sitting-room grate. "Bewty" expanding barless fire fronts (Pascall's Patent), for modernising old-fashioned sitting- and bedroom grates at a small cost, and wrought welded range boilers of every description, etc., are also on view.

Stands 98-99. The "Builder," Ltd.—At an attractive stand, decorated in black and white, copies of *The Builder* and of *Architecture* may be obtained. This latter publication will deal in its next issue with cinema design and construction, with numerous plans and elevations of recently-built cinema-theatres. Books relative to the architectural profession and the building trade are also displayed and sold on this stand, including "Estimating for Builders," by J. H. Barns, F.I.O.B., the newest book on the subject; "The Law Relating to Dilapidations and Waste," by W. T. Creswell, Lic.R.I.B.A., Associate (late Fellow) of the Surveyors' Institution, Barrister-at-Law—a book which every architect, builder, surveyor and estate agent needs; "Houses with Three and Four Bedrooms"—a series of illustrations and plans; "Bungalows"; "Old London Illustrated," being a collection of valuable illustrations by the late H. W. Brewer, with descriptive matter by H. A. Cox, F.C.A., dealing with "Old London"; and "Approximate Estimating," by Alan W. Davson, F.S.I.

Stand 101. John Fowler & Co. (Leeds), Ltd.—The Fowler 7/5 hoisting mixer, comprising a standard mixer with power-operated loading skip, capable of turning out 5 cubic feet of mixed concrete per batch, and a winding drum and hoist mounted on the same frame and independently driven by a 5 h.p. Petter paraffin engine, which has ample power to run both mixer and hoist simultaneously, is on view at this stand. The Fowler tilting drum mixer, which may be used for both concrete and plaster, and whose capacity is 4½ cubic feet of unmixed materials, giving 3½ cubic feet of mixed concrete, is also shown. It has extra strong design, with channel frame and disc wheels, and an improved drum base and mixing blades, which will thoroughly mix hair, plaster, mortar, or first coat pebble dash as well as ordinary concrete. The firm's telephone number is Leeds 21641-2.

Stand 102. Sharp Bros. & Knight, Ltd.—This Burton-on-Trent firm is displaying several lines of good English-made doors and standard casement and sash windows. Mantelpieces, cupboards and dressers, and entrance gates of good construction are shown. This firm—which was founded in 1837—also manufactures shop-fronts in all woods, bank and bar counters and fittings, panelling in all hard woods, etc. Photographs and designs will be shown on request. Telephone: Burton 350.

Contractor's Estate.

Mr. James William Guthrie, of Beechwood avenue, Darlington, contractor, left £18,19[illegible] (net personalty £11,479).

(For rates of wages in the Building Trade in Scotland see page 409.)

CONTRACTS, COMPETITIONS, &c.

For some contracts still open, but not included in this List, see previous issues. Those with an asterisk are advertised in this number. Certain conditions beyond those given in the following information are imposed in some cases, such as that advertisers do not bind themselves to accept the lowest or any tender; that a fair wages clause shall be observed, that no allowance will be made for tenders; and that deposits are returned on receipt of a bona-fide tender unless stated to the contrary.

The date given at the commencement of each paragraph is the latest date when the tender, or the names of those willing to submit tenders, may be sent in; the name and address at the end is the person from whom or place where quantities, forms of tender, &c., may be obtained.

Following is a list of abbreviations :—Borough Surveyor, B.S.; Borough Engineer, B.E.; District Surveyor, D.S.; Clerk, C.; Town Clerk, T.C.; County Engineer, C.E.; County Surveyor, C.S.; County Architect, C.A.; Surveyor, S.; Engineer, E.; Borough Architect, B.A.; Architect, A.

BUILDING. PAINTING, ELECTRIC LIGHTING, HEATING, ETC.

A Successful Year.

The directors' report for the year ended May 31 last states that the profits of Messrs. Crittall Manufacturing Co., Ltd., for the year amounted to £163,285, an increase of nearly £50,000 as compared with the previous year. The directors recommend the payment of a dividend at the rate of 15 per cent. per annum on the £600,000 ordinary share capital, for the past year, leaving £29,273 to be carried forward as against £15,355 brought in to the present accounts.

Lift Makers' Alliance.

An alliance has been formed between the firms of John Bennie, Ltd., Glasgow, and Marryat and Scott, Ltd., Hatton Garden, London, E.C.1. Both are, of course, well known as makers of lifts. The alliance will facilitate the production by Marryat and Scott of extra heavy machines, while the Scottish firm will benefit in the matter of electrical and mechanical aid. The two businesses will be run as before, separately and in competition with one another.

PLYMOUTH.—Plans have been approved for extensions to Presbytery at Holy Cross R.C. church, for Rt. Rev. Bishop of Plymouth. Architect, L. F. Vanstone, 15, Old Town-st.—Alterations and extensions to the premises of Messrs. B. Taylor and Co., have been approved. Architect, L. F. Vanstone, 14, Old Town-st.—B.C. approved alterations to "Clifton Hotel," Clifton-st., for Mrs. E. Chillcott. L. F. Vanstone, architect, 15; Old Town-st.
ROMFORD.—B.G. provisionally agreed to purchase 26 and 28, Manor-rd., at £1,750, for use as children's homes. Repairs will be about £300.
SALFORD.—T.C. are to borrow £813 for setting back boundary wall fronting premises 4, 6 and 8, Camp-st., Broughton, and executing the necessary street works.
SHEFFIELD.—B.E. approved proposal to establish a nursery school, and approved plans of buildings, which are to be erected on site in Denby-st.
SPENBOROUGH.—U.D.C. are to erect 70 additional houses on Gomersal site. Tenders are to be invited.
STAPLEFORD.—Notts E.C. approved purchase of four acres of land near junction of Pasture-la., and Hicking-la., for provision of school for about 400 children.
STOCKTON.—R.D.C. sanctioned for an assembly hall at Witham-av., Preston, for Miss D. Lawrenson-Eaglescliffe.
SUNDERLAND.—Plans for Jewish Synagogue been prepared by M. K. Glass, F.R.I.B.A., of Saville-row, Newcastle. The building will accommodate 400 people.
TANKERTON.—W. Puttick, 71, harbour-st., Whitstable, has completed plans for cinema.
THIRSK.—Executive Committee of Lambert Memorial Hospital are introducing scheme for extension of building, which gives an addition of probably 8 new beds, and which may involve an expenditure estimated at, roughly, £600 to £700.
TORQUAY.—Land at Meadfoot, Ilsham Valley, is to be developed. Vanstone & Bull, architects, Midland Bank-chmbrs., Paignton.
TYNEMOUTH.—Corporation has approved plans for 82 houses on St. George's estate, Cullercoats.
UXBRIDGE.—An arcade with 30 lock-up shops is to be built.
WEYMOUTH.—T.C. passed plans: G. Chalker, pair of semi-detached houses, Khartoum-rd.; Smith & Lander, two pairs of semi-detached houses, Buxton-rd., between Clearmount and Khartoum-rds.
WORTHING.—Extension of promenade at east end of Worthing is proposed.
YARMOUTH.—Old Theatre Royal is to be pulled down and new theatre built.
YORK.—Plans been approved by Corporation for cinema at Goodramgate, to be erected by National Electric Theatres, Ltd., Grafton House, Golden-sq., London. Site of cinema will be that of Palais de Danse.

Brixton School of Building.

We have received a copy of the Prospectus and Time-Table of the School of Building, Ferndale-road, Brixton, for the session 1927-28. The evening classes begin on Monday, September 26, and enrolment week is from September 19 to 23. Mr. F. E. Drury, M.Sc., F.I.Sau.E., is the Principal-designate, and Professor Beresford Pite, M.A., F.R.I.B.A., is Director of Architecture.

The school has been established by the London County Council to enable artisans and others engaged in the building trades and allied professions to acquire an intimate knowledge of the principles that underlie the processes which they have to carry out in their daily work. Workshops have been provided and equipped for the practical teaching of the several building trades under conditions similar to those met with on buildings and in builders' shops. A School of Architecture, with courses of instruction in the history of building and for the study of architectural design and planning, together with the preparation of architectural drawings, forms part of the complete scheme of the work of the school. Lecture and class-rooms, drawing offices and laboratories have been arranged in connection with the workshops so that the practical work of the school may be combined with class studies in building construction, drawing, architecture, and the chemistry and physics of materials. There are also a library, common and refreshment rooms, for the use of students.

The Prospectus, which contains a number of illustrations of work in progress in different shops, contains full particulars of the subjects taught and all other information required by the intending student. All communications should be addressed to the Principal at the School, Ferndale-road, Brixton, S.W.4.

New Bridge for Paris.

To facilitate river traffic an old bridge, the Pont de la Tournelle, Paris, which joined the Ile Saint-Louis to the south bank of the river, has been demolished, and a new structure is being erected. The new bridge will be a single span of 75 yards, and will be the first in Paris to be built of reinforced concrete, though it will have an outer covering of stone.

THE SCOTTISH BUILDER

NEW BUILDINGS IN SCOTLAND

Buckhaven.—Cinema.—The main contracts in connection with the enlargement of the Palace Picture House have now been fixed. The architect for the scheme is Mr. G. C Campbell, Methil, Fife.

Carluke.—Theatre.—Plans prepared by Mr. J. L. Ross, 50, Main-street, Wishaw, for the new picture theatre at Carluke, Lanark, to be built by Carluke Cinema, Ltd., show seating capacity for approximately 1,000 persons.

Coatbridge.—Accommodation.—The question of the provision of additional accommodation for Coatbridge Secondary School has been adopted by the Lanarkshire Education Authority. The Authority will purchase three lots of house property adjoining the school at a total cost of £2,125 and expenses, and that on the sites of the buildings additional school accommodation is to be provided.

Dumbarton.—Houses.—Sixteen new houses are to be erected by Dumbarton County Council in the Cardross district. The houses will cost £6,300

Dundee.—Buildings.—Plans and sections of the following proposed new buildings, etc., have been lodged at the Office of the City Engineer:—Adelaide-place—houses for Mr. Wm. Little, Mr. A. Lickely, architect, 8, Panmure-street; Bank-street—warehouse for Mrs. J. H. Scott, Mr. G. Jamieson, architect, 20, Whitehall-street; Nethergate—store for the Trustees of St. David's Masonic Lodge.

Edinburgh.—Buildings.—The Dean of Guild Court has passed the following plans:—Mr. W. Brodie—store and toolshed at 42, Saughtonhall-avenue; Mr. C. H. Greig and others—four garages at Thorburn-road, Colinton; Messrs. Thomas L. Rae & Co.—nineteen bungalows at Kirkhill-drive and Gardens; Messrs. Smith & Murdoch—four bungalows at Hillview-terrace, Corstorphine; Mr. R. M'Gibbon—two bungalows at Corstorphine Park-gardens.

Elgin.—Hall.—Plans of a dance hall, billiards saloon, and shop, proposed to be erected at 29, South-street, by Mr. P. Civiera, have been approved by the Town Council.

Jamestown.—Improvement.—The Dumbarton County Council has approved of the arrangement come to by the Vale of Leven District Committee with the L.N.E. Rly. Co., regarding the strengthening and maintenance of the bridge which spans the Dalmonach Works railway line at Auchencarroch-road, Jamestown.

Paisley.—Reconstruction.—The reconstruction and enlargement of the Lorne Cinema has now been definitely decided upon, and Messrs. Gardner & Glen, 164, Bath-street, Glasgow, are preparing the necessary plans.

Appointment.

Mr. W. J. Noel Bryce, of Glasgow, has been appointed by the Perth District Committee as Road Surveyor in succession to the late Mr. Alex. M'Arthur

Fire Resistant Construction.

Special Report No. 8 on this subject, by Messrs. R. E. Stradling and F. L. Brady, has just been issued by the Department of Scientific and Industrial Research. Part I gives a brief outline of the effect of high temperatures upon building materials generally. Part II describes the experimental work carried out in the endeavour to elucidate, and then to improve, the fire-resisting properties of concrete. It is shown that by the addition of a pozzolanic material to Portland cement concrete a very considerable absorption of the lime (set free on hydration of the cement) can be brought about, the presence of this free lime being demonstrated to be the most serious factor in the deterioration of concrete under fire. The report may be obtained of H.M. Stationery Office, price 1s. 6d. net.

BUILDING TRADE WAGES IN SCOTLAND.*

The following are the present rates of wages in the building trade in the principal towns of Scotland. Every endeavour is made to ensure accuracy, but we cannot be responsible for errors that may occur:—

	Masons.	Bricklayers.	Carpenters, Joiners.	Plasterers.	Slaters.	Plumbers.	Painters.	Labourers—Masons', Bricklayers', Plasterers'.

*Carter & Frankland £182 1

Painting two lodges, etc., at Roundhay Park, and the Mansion, Park Cafe, etc., at Roundhay Park—
*L. E. Wilkinson £269

ESTIMATING ON RIGHT LINES

Everyone whose business it is to quote for building work should master the principles upon which estimating is based. These principles are clearly explained and illustrated in

'HOW TO ESTIMATE'

by J. T. REA,

a unique and invaluable work which is not excelled in thoroughness or in scope by any similar book known.

Fourth edition (now ready). 540 pages. Price 15s. net (by post 15s. 9d.). Containing thousands of prices and hundreds of examples of analysis, showing how a builder can make up rates for himself. In view of the difficulty of fixing standard prices under present conditions, the author has included an important series of Adaptation Tables and Percentages (corrected to February, 1927). *which show how rates may be adjusted to meet variations at any time.*

Before purchasing any other book on this vitally important subject, you are invited to inspect this—the standard work which is in use by over 30,000 builders.

A Copy will be sent by return, and your Remittance refunded if the Book does : : not satisfy your requirements : :

B. T. BATSFORD, LTD.
Publishers, 94 High Holborn, London, W.C.

LEEDS.—Painting of the Civil Court, Town Hall for the T.C. :—

THE BUILDER

A JOURNAL FOR THE ARCHITECT AND CONSTRUCTOR

WITH WHICH IS INCORPORATED "THE BRITISH ARCHITECT."

OL. CXXXIII. No. 4415. SEPTEMBER 16, 1927.

THE INTERNATIONAL CONGRESS

THE proceedings of the Eleventh International Congress of Architects, the first genuinely international assembly of its kind since 1914, afford evidence of the advantage of resuming these triennial exchanges of opinion, and the Royal Institute of British Architects we think, to be congratulated for having taken a wise step in timating that it could only participate in such a congress hen it became possible to make it truly international by the clusion of representatives of all civilised countries. As a sult of this and other similar expressions of opinion the recent ngress included delegates from twenty-six countries in the d and new worlds, the only great State not represented being e Union of Socialist Soviet Republics, which could, perhaps, sufficiently justified by the fact that the definition "civilised untries" was questionable in its application to the present gime in Russia.

The Congress was remarkable not only on account of the nanimous resolutions arrived at on several important ques-ns, but for the fact that (in spite of wide differences of race, nguage, local conditions and needs) there was an underlying d fundamental similarity in most of the problems which ured on the agenda and a general agreement (after these atters had been debated) as to the methods to be adopted in eir solution.

Many of the subjects have been periodically discussed in eat Britain, and among these the most interesting was at of the recognition of the status of the architect and the otection of the title by law. In the discussion of this problem ere was clear evidence that architects from all countries re agreed on the need for the legal recognition ot the title of hitect, and this view was reinforced by the opinion of official legates from countries such as Italy, Portugal, Spain and ngary, where such recognition and protection has been in ce long enough for its operation to be appreciated and the ects estimated.

During the debate it also became evident that a problem ich is causing anxiety to many British architects is also parent in many other countries; the growth of official and nicipal architecture to the detriment of what was termed "free" architect. This particular problem did not figure the agenda and the informal conversations with reference to gave no indication of a solution. The views of members re probably fairly represented by the remark of a German egate who (referring to conditions in that country) said t architects were feeling the pinch of competition on two es; on the one hand there was the municipal and public itect, and on the other there was the big contractor, who er plans important buildings himself or employs an architect small salary, to do this in his office. This view was shared the representatives of many other countries, including the ted States of America, and undoubtedly was a factor in ducing a general agreement that there was an urgent and need for the re cognition and legal protection of the title architect" in all countries, and the equally general con-ion that, as a corollary, it was necessary that all architects ld be members of professional societies limited to their profession and accepting and enforcing strict rules of essional conduct on their members, to ensure a reasonable dard of professional practice, common to all civilised ntries. This, it was felt, would be of great value in any hange of views on architectural co-operation in the future.

he Congress was probably somewhat optimistic in the final graph of the resolution on this subject, and went further is practicably feasible in expressing the view "that an itect" who is in possession of the legally recognised title is own country, should have the free right to practise in other country in which the title of architect is protected by law." Reciprocity presents an aspect of Registration which we do not imagine has been considered, and one which might raise a certain number of difficulties in our own country and also in France, though it is obviously the logical complement to universal protection of the title.

Among the other subjects on the agenda was the problem of the relation between the *Architecte-Conseil* and the *Architecte-Constructeur*, or in other words, the architect as a professional adviser and artist or as a man who not only plans a building but is also actively engaged in the work of building. On this subject, after an interesting debate, it is satisfactory to note that the Congress unanimously agreed to a resolution which made it clear that architects and contractors should be entirely distinct and separate; the Congress indeed went further and instructed the Permanent Committee "to proceed forthwith with the drafting of an international code of practice which should define and regulate the relations of the architect to the execution of his works and the moral side of his profession, with the object of finding a formula which should be acceptable to all countries."

To those who have any experience of practice abroad it will be evident that the acceptance of this resolution marks a considerable advance, and that if the desired "common formula" can be evolved it will materially assist in raising the international status of the architect to the level which is regarded as essential by the R.I.B.A. and its allied societies, and will therefore facilitate international relations between ourselves and other countries.

Whether changing conditions will gradually produce an entirely new conception of the function of the architect is another matter; one sees interesting portents in the growth on one hand of the official architect, while on the other looms the great organisation of the up-to-date contractor who, when necessary, retains the services of an eminent architect to deal with some special problem of design or construction, or employs a young member of the profession as one of his permanent staff. That this should become the generally accepted practice appears improbable, in spite of the fact that the general public in all countries does not regard the services of an architect as being essential for anything in the shape of a small house, a factory or a moderate-sized office block, and has no conception that here, as in other professions, such as that of the engineer, the doctor or the barrister, the fully-trained architect (by the exercise of his skill and professional knowledge) can save much more than the modest fee which constitutes his reward.

The cure in our own, as well as in other hands, would seem to be in the continual and persevering endeavour to educate the public. This would probably have already produced some results had not the war thrown up an entirely new race of clients, endowed with considerable business capacity but sometimes deficient of any appreciation of the beautiful, or even of the practical advantages of good planning and composition. But this is too intricate a subject to be treated here, and we will therefore conclude our survey of the work of the International Congress by mentioning that among the other matters discussed was the question of the Regulations for International Competitions. The resolution passed endorsed the existing regulations (as printed in the R.I.B.A. Kalendar) but added a recommendation that a clause should be added making it obligatory for the jury of any international competition absolutely to respect these regulations.

To sum up, the general impression left on our minds by the proceedings of the Congress is that it marks the commencement of a new era in architectural co-operation, and that if the spirit of mutual goodwill and compromise is maintained, much may be achieved by common action in the coming years.

NOTES

Sir John Simpson and the R.I.B.A.

We publish this week on page 419 the correspondence which has passed between Mr. Walter Tapper and Sir John Simpson with regard to Sir John's supersession on the Council of the British School at Rome. We cannot imagine that the matter can be allowed to remain where it is, and we hope that an official explanation may throw a more favourable light upon a distinctly unfortunate incident.

The Future of London.

Do we realise what are the ultimate forces which govern our lives and our environments? At the present moment it would, we suppose, be impossible to forecast what is to be the next definite procedure, and what is to be its character, in regard to the future of Waterloo and Charing Cross Bridges. Yet how the future quality and amenity of this great centre of London will depend on what is done! As architects we are chiefly concerned for a fine and dignified city development. As suburban ticket-holders we want to get into the West End as quickly and comfortably as possible. As railway shareholders we want to see our share values protected. As ingenious inventors of Charing Cross new bridge schemes we hope to see our projects realized. As owners of property in and about the area of the projected improvements we hope to see our interests protected and our holdings improved in value. And so on—we each argue for our own hopes and visions, whilst meantime certain forces are at work which will eventually decide it all for us. We may have suddenly sprung upon us a scheme which is carried through even if it is opposed to all our best hopes for a fine and beautiful architectural development. All the influences which can be exerted for the attainment of the finest city ideals should be brought to bear on this outstanding problem in the development of London. The London Society, if it is to be worthy of its name and its mission, should put forth all its effort to maintain a claim for something higher than momentary money values in the settlement of an issue so vital to the beauty and amenity of London.

Guidance in City Improvements.

We are aware of the many difficulties which surround us in this matter; but what we feel so seriously about it all is that some scheme or course of action may be adopted which will be bitterly regretted by those who have the highest interest of London at heart. If we had some really authoritative body to appeal to in the matter of great London improvements we should know where we are. But even an enlightened and energetic body like the London County Council h apparently certain limitations to power, and is, of course, unable to impo its desires over the heads of all sorts public companies and authorities. T Royal Commission may advise, but th is its only function. Thus we are left in position of some uncertainty so that a protest or intervention falls powerless the ground. The holiday season will so be over and then we may look for a renew of activity in the various projects f city improvements.

Dublin's "Civic Week."

A welcome sign of Dublin recovery from the tribul tions of recent history is t "Civic Week" which t city will hold from the 17 to the 25th of this month. An interesti programme of events designed to s forth Dublin's history, commerce, a attractions has been arranged. It i cludes historic and industrial pageant lectures, picture exhibitions, concert competitions of different kinds, danc and sports. A welcome feature from th architectural point of view is a Tow Planning Exhibition, under the directi of Mr. Manning Robertson. Speci reduced fare facilities for Briti visitors are available during t week, and many will doubtless tak advantage of this favourable oppo tunity of visiting the capital of o neighbour isle.

The Scottish-American War Memorial, Princes Street, Edinburgh.

Mr. R. Tait Mackenzie, Sculptor. Mr. Reginald Fairlie, A.R.S.A., Architect. (*See page* 433.)

Our Public Statues.

The complaints in a contemporary that our public statues are neglected, and that there appears to be no one responsible for keeping them in order, if only partially true, may suggest that our public statuary does not reach that point in our regard when we should be more solicitous for its welfare. And though there is good statuary in public places and, it must be added, some very bad, the public interest is not sufficient to secure the recognition of its important contribution to the beauty of our cities. How different is the case in France, where the art of the sculptor is so much more regarded. A visit to Antwerp reveals to us the greater pride there is abroad in their famous men. Statues of poets and painters, whose works are the glory of the city, occupy the principal situations in their public squares, and testify not only to an appreciation of statuary, but of pride in native achievement. It is true that war memorials have increased the demand for statuary in public places in England, but it is the lives of the great poets, scientists, sculptors and painters that we could wish to see commemorated, and we may take a lesson from Antwerp in the civic pride which glorifies the masters which have given lustre to its name.

London Garden Guild.

There is something particularly agreeable in the encouragement of garden culture, not only for the pleasure which such pursuits include, but for the charm thus added to otherwise dull surroundings. As an occupation for the leisure of the Londoner, there is much to interest him and reward his labours. The recent exhibition of the London Garden Exhibition Society in the Temple Gardens shows how much may be done to give charm to the smallest back garden, or even yard, in the great Metropolis. Some 12,000 people entered for this competition, and its importance in promoting the natural adornment of neglected spots and unsightly places in all parts of London is a welcome contribution to the improvement of its amenities. There are so many ways in which this charm of nature may be brought to ameliorate barren places. The window-box, the roof garden, the yard, may all receive the attention which the care and love for flowers and creeping plants merit, while they provide the most innocent and agreeable of pleasures.

More Freedom for Building.

The Ministry of Health in the Annual Report for 1926, which will be published some time this month, will no doubt refer to the exceptional progress that has been made lately in bringing by-laws up to date. By-laws are often criticised because they are old-fashioned and therefore restrict new methods of construction and the adoption of alternative materials. Several times during recent debates in Parliament on Housing it has been urged from all quarters that out-of-date by-laws were not only unreasonable but were contrary to the national interest. It is sometimes forgotten, however, that as long ago as 1912 the Local Government Board urged all local authorities, both urban and rural to bring up to date any by-laws of a restrictive type, and in 1914 a Departmental Committee was set up to consider the control at present exercised in England over the erection of buildings and the construction of streets by means of by-laws and local regulations, and their effect upon building and development, and to make recommendations. The work of this Committee was interrupted by the War and their Report was not presented until 1918.

A House at Holmbury St. Mary; Foot of Stairs.

Mr. Oliver Hill, F.R.I.B.A., Architect.

Model By-laws.

Since that date three series of model by-laws have been issued by the Ministry of Health. It is, of course, open to any local authority adopting any of these model by-laws to propose additional safeguards, if justified by local circumstances. There has been a great advance in the past six years. In 1921, 12 series were confirmed, in 1922, 30, in 1923, 82, in 1924, 194, in 1925, 385 and in 1926, 380. It may now be said, indeed, that the main part of the work of revision has been carried out by agreement. At the same time the Ministry of Health has statutory power to require any backward Council to revoke any by-laws which it is satisfied are, or are likely to be, an impediment to building of any class. This power is not limited to housing, but looks forward to the whole future of building in order to ensure that proper methods of construction for any class of building shall not be restricted.

Our Cotswold Possessions.

The Cotswold country and its beautiful old buildings are amongst our most valued possessions, and it is good to hear of further efforts for the preservation of their charm. The Cheltenham Town Council have agreed to purchase the Leckhampton Hill estate of 387 acres for £5,600, for preservation as an open space, which thus adds another piece of natural beauty for the enjoyment of the public, at a very small cost. At the same time, we learn that a landowner in the Cotswolds has left provision in his will for the free gift of land to those who build on it in the true Cotswold manner, which must be approved by his trustees. This is a pleasant change from the old time when such public common land was appropriated by private individuals.

GENERAL NEWS

Architect's Estate.

Mr. Oliver Williams, of Eden-terrace, Northend-road, Londonderry, architect, left £2,626 (personal property).

Library for League of Nations.

The offer of Mr. Rockefeller of a donation of £400,000 for the establishment of the League library at Geneva has been accepted.

Mr. F. G. Minter's Estate.

Mr. Frederick George Minter, of Norfolk-street, Park-lane, head of F. G. Minter, Ltd., building contractors, of Ferry Works, High-street, Putney, who died on July 31, aged 68, left £257,093, with net personalty £192,419.

Suggested Tube Railway for Manchester.

The Underground Railway Committee of the Manchester Corporation, which has been considering the building of a tube railway in certain parts of Manchester, has decided to recommend the construction of an underground system at a cost of £25,000,000. The scheme comprises an inner circle and a fifty-mile system into the outlying districts.

Rural Industries in Kent.

The Development Commissioners have made a grant of £460 in aid of the further revival and development of rural industries in Kent during the coming year. This grant will be administered by the Kent Rural Community Council. All inquiries and communications concerning rural industries in this county should be directed to Major Shoeten Sack, the Secretary to the Council, at 13, Earl-street, Maidstone (Rural Industries Bureau).

New Aerodrome.

A new aerodrome for a separate unit of the Royal Air Force is to be erected at Boscombe Down, near Amesbury (Wilts), as a Home Defence station. A derelict aerodrome at Boscombe will be renovated and new quarters built on a 500-acre area which the Government purchased about two years ago. Work will be begun in October The estimated cost is £271,000.

R.I.B.A. Statutory Examinations.

The R.I.B.A. Statutory Examinations for the office of District Surveyor under the London Building Acts, or Building Surveyor under local authorities, will be held at the R.I.B.A., London, on October 19, 20 and 21. Applications for admission to the examinations, accompanied by the fee of £3 3s., must be received at the R.I.B.A. not later than Monday, October 3. Full particulars of the examinations and application forms can be obtained from the Secretary, R.I.B.A.

Public Works Loans.

Loans amounting to £40,510,073 were approved by the Public Works Loan Commissioners during the financial year ended March 31 last, while the amount actually advanced during the year was £37,187,448. This sum was advanced on 6,573 applications, the largest number ever made in the fifty-two years of the existence of the Public Works Loan Board, whose annual report was published on Saturday. In the previous year (1925-26) 5,505 advances were made for sums amounting to £29,170,880, prior to which the largest number in any year had been 4,460, amounting to £50,506,088 in 1921-22.

The Lincoln Churches.

Increasing protests are being made against the proposal of the Corporation of Lincoln to sell and demolish the churches of St. Benedict and St. Peter-at-Arches. Although the Corporation has approached the Ecclesiastical Commissioners on the ground that the sites occupied by these old churches are needed for the accommodation of the increasing motor traffic and for new or wider roads, it is reported that there is no immediate likelihood of the churches being pulled down. The architect of the Society for the Preservation of Ancient Monuments has visited Lincoln and is making a report on the whole question.

London's Squares.

The construction of underground garages beneath London squares is a suggestion which will be placed before the Royal Commission on London squares by the Incorporated Society of Auctioneers and Landed Property Agents. The Society will also state that "They think it will be necessary to consider the future of each square separately. Where, for instance, houses are the primary need, development schemes ought not to be ruled out, though strict conditions should be laid down as to the class of houses to be erected."

The Marne Monument.

A site, which is being offered to the French nation by American subscribers, has been chosen near Meaux for the monument commemorating the first Battle of the Marne. Ground has been bought adjoining the Meaux-Soissons road, about half a mile from the former town. It is expected that the monument, of which Mr. Frederick MacMonnies is the sculptor and Mr. Thomas Hastings the architect, will be unveiled next year. The monument, which will be about 65 ft. high, has as its main feature a figure symbolising France supporting two soldiers mortally wounded.

Centenary of Telford's Bridge, Conway.

A great deal of well-directed and painstaking effort has been put into the preparation and production of the historical pageant and pageant play, by the presentation of which, on six days of this week, the ancient borough of Conway is celebrating the centenary of the opening of Telford's suspension bridge over the river Conway. The play, which follows in the Castle grounds, is by the Rev. A. E. Jones, of Penmaenmawr, who is also responsible for the history and scenery of the pageant proper. It is prefaced by an interesting prelude in which Telford, the bridge builder, appears and recalls that he was himself a Celt and a poet as well as an engineer.

The Court House at Winchelsea.

On the initiative of the Mayor of Winchelsea, the old Court Hall, the most interesting secular relic of mediæval Winchelsea, has been opened to the public. The original fireplaces, the arms of the various bailiffs, and a fourteenth-century painting of St. Leonard may be seen in the hall. The building is oblong in shape, with a gabled roof and a panelled chimney, and is substantially the same in form as when it was built by Edward I. The present hall was probably rebuilt in Tudor days from materials of the older buildings.

Under the little garden east of the prison yard of the Winchelsea Court House a mediæval flooring of tiles has just been found. The pavement is 15 ft. by 9 ft. The tiles, which are 10 in. square, are red, but with a surface of yellow or green. It is probable, suggests the *Times*, that there is more of the flooring under a brick path which is used for access to the stairway to the Court Room, and under the house east of the garden. The surrounding walls contain blocked arches and windows, and hint that a thorough investigation of this site would repay the trouble. There are suggestions that a building of importance stood there long before the reign of Edward I, and that it was probably of Saxon origin.

Town-Planning Institute: Annual Country Meeting.

The ninth annual country meeting of the Town-Planning Institute will be held at Winchester from Thursday, October 6, to Sunday, October 9. A full and varied programme has been arranged. It includes a visit to Southampton, to inspect the Ordnance Survey Department and the Docks; tours in and around Winchester, where a visit will be paid to the large housing scheme of the Corporation, designed by Mr. W. Curtis Green, A.R.A., and a char-a-banc tour of the New Forest, including Romsey, Lyndhurst, Beaulieu, Lymington, and Brockenhurst. Copies of the programme may be obtained on application to Mr. Alfred R. Potter, Secretary, Town-Planning Institute, 11 Arundel-street, Strand, W.C. 2.

Restoration of St. Bartholomew's.

The work of recovery and restoration which has been in progress during the past nine months at the Church of St. Bartholomew the Great, in West Smithfield, is nearing the end of its first stage, and it is hoped that the east cloister abutting on the site of the vanished chapter house will be completed next month. In the course of the excavations discoveries have pointed to the existence of a north cloister, and the authorities are considering the possibility of acquiring further property adjoining the church, in order that their original scheme of excavations may be extended. Remarkable success, according to the *Times*, has attended the work so far carried out. Up to 1905 the cloister was being used as stables, and rough walls covered with plaster obscured the ancient architecture. A part of the stables was acquired in that year, and the three north bays of the cloister were restored. There was then found to be 7 ft. of earth on the floor. In 1923 the remainder of the five bays of the cloister were purchased from stable-keepers, in order to celebrate the 800th aniversary of the founding of the priory and the hospital. The earth has been cleared away from the cloister floor and the ancient entrance to the Dorter Stair has been discovered. This consists of Norman work of about 1160. It would seem that when the cloister was rebuilt, in the fifteenth century, this entrance to the Dorter Stair was left incomplete, but was incorporated in the new work. The same principle has been followed, and it has been incorporated in the recent restoration. In all, three old arches have been brought to light in this cloister, and, considering the period that has elapsed since they were last touched, they are wonderfully well preserved. The biggest of these is the great entrance arch of the chapter house. The former floor level in the cloister is indicated by the discovery of some of the original tiles, black and yellow alternatively *in situ*. In the course of the work a curious stone coffin, filled with earth, was found.

COMPETITION NEWS

Town Hall Extension, Accrington.

Accrington Corporation is to invite competitive designs for extensions to the Town Hall and Municipal Buildings, and an assessor is to be appointed by the R.I.B.A.

COMPETITIONS OPEN.

Municipal Buildings and Business Premises, Herne Bay. Premiums: £150, £100 and £50. Professor A. E. Richardson, F.S.A., F.R.I.B.A., assessor. Apply Clerk to Council, Westminster Bank House, Herne Bay. Deposit of £1 1s. required:	Particulars published in Sending "Builder," in date	July 8 Oct. 1
Municipal Buildings, Wimbledon. Premiums: £200, £150 and £75. Mr. H. V. Ashley, F.R.I.B.A., assessor. Apply Mr. Herbert Emerson Smith, LL.B., Town Clerk. Deposit of £2 2s. required:		July 15 Nov. 3

Church of St. Vincent Ferrer, New York City.

The late BERTRAM G. GOODHUE, Architect.

THE REBUILDING OF DUBLIN

By FELIX HOLT, A.R.I.B.A.

For the past eight years Dublin has been occupied in the rebuilding and reconstruction of her public and historical buildings destroyed in the Rebellion of 1916 and 1920, and the almost complete rebuilding of her main street, once known as Sackville-street and now rechristened O'Connell-street. It was this street that felt the effects of the revolution most heavily, practically the whole of the east side having been destroyed, and the west side suffering little better fate.

Progress has been, of necessity, slow, but that much of O'Connell-street which has been rebuilt gives to an admirer of the old some comparison to work upon. The General Post Office, the one predominant building in old Sackville-street, is still the outstanding note in the new O'Connell-street. Although it was practically destroyed in the first revolution, the main façade fronting O'Connell-street was fortunately left standing untouched like a large screen wall. This building is being reconstructed now, but, apart from the front façade, will be nothing like the original building, to judge from the work already completed. Shops are being placed along the side, together with arcades. This work is being carried out by the Board of Works. It seems a pity that economic necessity prevents this strictly classical building (which was designed by Francis Johnston in 1814) from being reconstructed on the original lines.

In the rebuilding of the opposite, or east, side of O'Connell-street, some sort of uniformity has been attempted by putting the main cornices at the same level, in the manner of Regent-street, only with less happy results. Each building has been designed without any regard for its neighbour, and the consequent effect is very unsettling. This is accentuated by the fact that some of the buildings are built completely in granite or Portland stone, while their neighbours are stone and bright red brick. The design of most of them (which for the greater part are banks, shops, and offices) is modelled on a style which does not find much favour at the present time in England. Façades are overcrowded with hard, square-cut detail, with consequent loss of refinement and lack of dignity.

On the same side of the street, just past where the Nelson Monument still stands, despite the oft-repeated threats to pull it down, there is a large derelict piece of land, with a frontage of some three hundred yards. Here, before the second revolution, stood a number of Dublin's better-known hotels. So far, the only attempt to rebuild on these sites has been in the cases of the Hannan and the Gresham Hotels. The Hannan is as yet little more than a steel skeleton, and, therefore, no idea can be formed of its design. But the Gresham is completed and was recently opened to the public.

It has been designed by Mr. Robert Atkinson, F.R.I.B.A., and strikes a completely new note in Dublin architecture. Standing, as it does at present, with ruins and waste land around it, the impression it at first gives is one of cold aloofness. Faced completely with Portland stone, it is designed with great breadth of feeling and restraint. A symmetrical elevation to O'Connell-street truly reflects the disposition of the rooms behind. At the ground floor an order of Ionic pilasters is carried throughout. The main entrance, centrally placed, is emphasised with a fan-shaped glass marquise. The building sets back about two feet at the first floor, except for the ends, which are ramped forward to the original face, which are only about three feet wide, and are carried right up through the main cornice, which ramps forward in like manner. These ends are the one weak point in the design of an otherwise pleasing front, but, no doubt, if the building is flanked on either side by other buildings of equal height, this weakness will disappear. The building is crowned with a Mansard roof, with a centre pediment composed of two massive scrolls and two urns, which gives a wonderfully finished appearance.

One enters directly into the main hotel lobby, which is carried out in a light-coloured French stuc. Opening directly from this lobby, on the right side, are the restaurant and tearoom. Both these rooms reflect the Ionic pilaster treatment of the front, with circular arches in between, which are filled with mirror glass, and give an impression of greater space than actually exists. Directly opposite the main entrance and opening off the main lobby is the Winter Garden. This has a vaulted ceiling and the walls are finished with a rough surface of the appearance of rough-cast. The treatment of this room seems oddly out of place with the rest of the hotel. The bedrooms start at the first floor, and are placed each side of a central corridor. Each bedroom or suite of rooms has a separate colour scheme, and great ingenuity and thought are shown in arriving at these, with, in most cases, very happy results. The principal idea in the carrying out of this is in the use of primary colours, which reminds one forcibly of the effect obtained by the same process on the Continent. This entirely new departure in Dublin building sets a standard which the city will do well to keep before it as the work of rebuilding progresses.

The *Irish Independent* newspaper building (the successors of the *Freeman's Journal*) has been erected on a new site in Upper Abbey-street, off O'Connell-street. This is one of the most successful of the post-revolution buildings. The front is carried out in stone with brick infilling, and is symmetrically designed. It has an order of heavy Doric columns above the ground floor, and a large slated attic story which shows up well from the street. The architects have shown restraint in the design, and have not overloaded it with small detail, which is all too common a characteristic of most of the other new buildings in the city. But, like many modern buildings which make a bid for boldness, it has an inclination to be clumsy.

Dublin's most interesting public buildings from an architectural point of view are the Customs House and the Four Courts, and, unfortunately, they suffered heavily in the revolution. The former is situated on the North Quay and fronts the river. The choice of site for this building was perfect, as its proportions could be well seen from many points in the city. It was designed in 1780 by James Gandon, who was a pupil of Sir William Chambers, and it was the best known of Dublin public buildings. It had restraint and dignity, but practically all that remained after its bombardment in the second revolution were the outside walls. The fall of its dome, which stood some 125 feet high, robbed Dublin of its most outstanding feature.

Although the work of reconstruction has been going on at this building for some time, little has been done to the interior or in the replacing of the dome. The exterior is assuming something of its old appearance, and is being carried out in exactly the same manner as originally. (In passing, it may be remarked how little have the outside walls of this and other public buildings been damaged, although their interiors are completely gutted.) It will be interesting to follow the rebuilding of the interior of this building, as a decidedly unique proposition occurs. Should it be rebuilt exactly as it was, with its 150-years-old ideas and inconveniences, or should it be replanned and possibly ruined for the sake of efficiency and progress? An admirer of the old Customs House may feel apprehensive on the point.

The Four Courts, which contained the Law Courts, barristers' chambers, Law Library, etc., and where, also, were stored the public archives of Ireland, has a similar position to the Customs House, facing the Liffey, but above O'Connell Bridge. The first design for this building was prepared in 1786 by one Corley, who died after building the western wing. The completion of the work was entrusted to James Gandon, who built an eastern wing similar to the western, placing the main entrance hall and courts centrally between these two wings and joining them and the central pavilion with screens. Little is known as to how much of his predecessor's ideas Gandon carried out, but it will be admitted that the results are both clever and original, although in mass and detail something is strangely reminiscent of the earlier work of Robert Adam. It was in this building that the revolutionary forces in the second rebellion made one of their last stands, and it suffered very heavily internally, due to artillery fire, by which, also, the dome was wrecked. Reconstruction is now in progress, and the dome and its base have been rebuilt, to all outward appearances, exactly as before. It is a similar type of dome to that on St. Paul's Cathedral, with an interior and exterior dome. But here the outside dome has no lantern and is very flat in appearance. The reconstruction work of the exterior, as in the case of the Customs House, is being carried out with great care, and is, as far as possible, an exact copy of that which was there before, with very happy results. Fortunately, the main façade to the Liffey, on which there is a great deal of well-preserved carving, was very little damaged. The free-standing groups of carving over the entrance screens would have been irreplaceable. A great deal of ingenuity is being shown in the patching and repiecing of damaged work. The front colonnade of Corinthian columns has been so well repaired that it is almost impossible to tell the new from the old, this effect being helped by the existing columns having weathered almost white on their front. As in the case of the other public buildings, very little work has yet been carried out in the reconstruction of the interior, and from an inspection of the building little idea can yet be formed of the intentions of the authorities.

In the new Dublin, public buildings will retain externally all their old charm; but in the rebuilt O'Connell-street, and in the streets surrounding it, the old individuality and restfulness have disappeared, to be replaced by haphazard building of unpleasing contrasts. Sufficient forethought has not been given to the task to make it a pleasing whole. Individual buildings by succeeding generations mark steps of progress and may have their charm; but extensive building over a limited space of time must be well ordered to give that unity which such wholesale building demands.

Stratford Memorial Theatre.

At the concluding performance of the Shakespeare Festival at Stratford-on-Avon on Saturday, Alderman Archibald Flower, chairman of governors, said he hoped the building of the new memorial theatre would start before Christmas. Their own town, of less than ten thousand inhabitants, had contributed nearly one pound per head to the rebuilding fund. The competition for the design of the new theatre has not yet been decided. The names of the three English and three American architects selected by the assessors to take part in the final competition were announced in *The Builder* for July 29.

CORRESPONDENCE

[While we are glad to publish letters on professional and other matters of interest to our readers, it must be understood that we do not necessarily endorse the remarks of correspondents, who will oblige us if they will express their views as briefly as possible.]

Sir John Simpson and the R.I.B.A.

[We have received for publication the following copies of correspondence which has passed between Sir John Simpson and Mr. Walter Tapper, P.R.I.B.A.]

September 3, 1927.

My Dear Simpson,—I am so sorry about the School of Rome matter. You will, I am sure, believe me when I say that neither myself or the Council had any idea of wounding your feelings in this matter. I am indeed sorry, and if you will kindly await my return I will, if I may, come and see you, and endeavour to explain matters.

I have just come from Avignon and the country round about. Great people the Romans, were they not?

With my kind regards,

Yours sincerely,

Walter Tapper.

9th September, 1927.

The President,
Royal Institute of British Architects,
9, Conduit-street, W.1.

Dear Tapper,—Your rather tardy reference to my letter to Mr. MacAlister is the first intimation I have received either from you or from him that it has reached you. I observe that the regret you now express is not for your action but for its effect, at which you seem to be surprised!

It would be futile to "endeavour to explain" this matter. Either proper consideration was given to it and the insult was deliberate, or, slovenly and indifference has led to blundering discourtesy. You and Mr. MacAlister (who, I understand, gave the Council no information) may impale yourselves on whichever discreditable horn of the dilemma you prefer.

As members of the Institute ought to be fully informed, I propose to publish the present correspondence, but have no intention of entering into any further discussion.

Yours sincerely,

John W. Simpson.

Sir,—It was with amazement and pain that I read Sir John's letter in your last issue, and at once beg you to publish this protest, which I am quite sure will receive the support of all those Licentiates who were interested in the work of "Unification." That Sir John Simpson of all men should have received such treatment from the R.I.B.A.—which he has served so well—that he is forced to resign his membership!

John E. Yerbury.

The Parthenon Frieze.

Sir,—It is with the greatest diffidence and hesitation that I ask you once again to grant me a brief space to say how much I have enjoyed Professor Lethaby's article on the Parthenon frieze which appeared in your issue of September 2, and to give an account of a little incident which came under my notice at the Highland Cattle Show held in Edinburgh in July last, and which confirms Professor Lethaby's opinions.

On the opening day of the show I was going round the stalls of the two-year-old stallions when I was startled by the resemblance of the attitude of one of them to some of the typical equestrian figures in this famous frieze. The stalls were boarded in all round with the usual dado front. This stallion was evidently suffering some discomfort from the heat and from itch. It was leaning against the back partition and rubbing slowly back and forward. The whole pose, with the arched neck and one forefoot up, gave the impression of a magnificent piece of sculpture, and in the half light looked most startlingly like a low relief. The sculptor of the Parthenon frieze must have been a lover of horses, and if he did not have a stud of his own must have had access to some wealthy Greek's stud, or perhaps was allowed to use the horses used in the chariot races as his models.

Great art belongs to no age, or rather belongs to all ages, and it is obvious that if we are ever to get back to great art in sculpture it must be through decorative realism and not through mere psychological individual interpretations. Mere sketchy photographic interpretations will lead us nowhere, but close observation and deep analytical anatomical research with an alert faculty for seizing the decorative lines is the only road to follow if we are ever to equal or emulate the great masters of bygone ages.

Unfortunately I had no camera with me on the opening day of the show, and although I returned with a high-speed camera two days later this special stallion referred to was quite comfortable and had its head looking out of the stall.

William Davidson.

Edinburgh.

Architectural Assistants.

Sir,—I have been very interested in a recent controversy on this subject. As one of those awful persons, an engineer to a local authority who employs an architectural assistant, I take up the cudgels on behalf of at least a section of my profession. It happens that many of my colleagues have had dual training both on the architectural or building side and in engineering. I suggest that the real contention underlying adverse criticism of officials in charge is that all beautiful work in a town is carried out by the architectural assistant and not by the engineer or surveyor to the Council, who nevertheless gets the credit.

Many engineers in fair-sized towns are so situated that in any one year they not only have a big housing programme but a good deal of other building work to undertake, or work which calls for tasteful appearance as, for example, bridges. It is impossible for *one* architectural assistant to undertake every one of the jobs. Some of the work, therefore, has to be given to engineering assistants under the direct instruction of the engineer.

Where a consistent policy of an attempt at beauty is obviously carried out, within the financial limits imposed by Council and Government Departments, and where not only an architectural assistant but various engineering assistants have been engaged on plans, who is responsible for this policy and for design? The architectural assistant or the man at the top? If there is only one job of outstanding merit in a town, then some claim might be made that the architectural assistant was responsible, but where a consistent policy is followed it cannot obviously be the architectural assistant who is responsible.

I know, and others know, that very much of the architectural work undertaken by some municipal engineers is nothing but a disgrace as regards design. Names, however, come readily to mind of engineers to local authorities who have carried out architectural work of a very high standard.

Coming now to the actual question of salaries. Some years before the War, in the office near London where I was engaged, the following "inside" salaries were paid:—

Chief architectural assistant, 50s. per week.
Other assistants, 25s. to 30s. per week.
Pupils, 7s. to 11s. per week.

Comparative "outside" salaries were:—

Builder's manager, 4 guineas per week.
Builder's foreman, 3 guineas per week.

From these figures it would seem that architectural assistants' salaries to-day do not compare unfavourably with those of their predecessors. With regard to the practice of architectural assistants undertaking evening and week-end work, this sort of thing is, I believe, frowned upon, and rightly, by trade unions.

E. G. T.

The Liverpool Cenotaph.

Sir,—In reference to the suggested site for the Liverpool War Memorial, according to the Liverpool Red Book, in December, 1911, the City Council (presided over by Lord Derby) decided to proceed with the suggested memorial to King Edward, a statue to be erected on the south-east corner of St. George's hall, with flights of steps, and "involving interference with the podium wall." This was after "an acrimonious debate." I believe a tender was afterwards accepted for about £2,500.

A corresponding statue to the late Queen would apparently have been on the opposite corner, near St. John's gardens, and over the gateway used, I believe, for prison vans. In the Church Congress handbook for 1904 the St. John's gardens are referred to as the future Civic Valhalla (in connection with the King's Memorial, etc.).

I suggested that the St. John's gardens be extended to cover the tramway sidings and underground lavatories in the Old Hay market, and the cenotaph be erected in front of the existing War Memorial, but, of course, without effect.

ARCHITECTURE IN DALMATIA.—II

By MARTIN S. BRIGGS, F.R.I.B.A.

The numerous learned people who do not know where to look for Dalmatia on the map, and who are still more vague as to its present ruler, are always inclined to brighten up when one speaks of Spalato; such are the blessings of a classical education! Most of them can tell the story of Diocletian and the cabbages, as related by Edward Gibbon, Gent., and they may even become eloquent about the vague and sordid details of that emperor's end. So it happens that Spalato, which does not hold a candle to Ragusa for picturesque situation or even for historical interest, is by far the most famous name on the Dalmatian coasts to English people. It may also be added that it is generally mispronounced. Like most other people who have travelled in Italy, I always pronounced it to rhyme with "tomato" (which is not an Italian word), until I was corrected this spring, and now I have learned to stress the second syllable instead of the third, because the word is derived from the Greek name ("aspalathos") of a local weed. But anything is better than the official Slavonic title of the town, "Split."

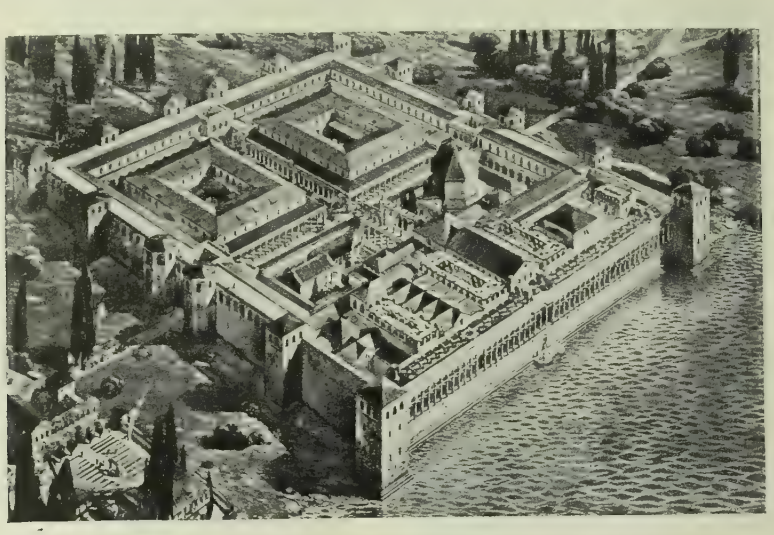

Fig. 5.—Diocletian's Palace at Spalato, from the restoration by MM. Hebrard and Zeiller.

The visitor arrives in Split, or Spalato, as I prefer to call it, at breakfast-time, having been denied any sight of the beautiful city of Zara during the night, if he has travelled on a Yugoslav boat, because Zara is now, thanks to the inscrutable decisions of statesmen after the Great War, an Italian colony. That omission prevents him from obtaining a complete sequence of examples of Dalmatian architecture, for, as Sir Thomas Jackson's chronology shows, Zara contains a number of early Romanesque churches bridging the gap between the Byzantine style of Parenzo and the late Romanesque of Traü. Nevertheless, Spalato is an excellent starting-place for a Dalmatian tour, because it contains one of the great Roman buildings of the world, and the pre-Roman remains in Dalmatia are negligible to the ordinary architectural tourist. Moreover, Spalato is very nearly a town of one building; in spite of its praiseworthy efforts in town-planning, so that the suburbs that have grown up round the old palace town, forming the nucleus of the present city, are being well laid out.

Diocletian's palace in its prime (see fig. 5) must have been a magnificent building, if, indeed, so complex a structure can be called a building. Born of humble parents in the neighbouring Roman city of Salona, Diocletian rapidly climbed the rungs of the military ladder, and in 284 was chosen as Emperor by the troops at Chalcedon. He lives in history as the author of cruel edicts against the Christians, but one feels that he must have been a born genius in several directions, and, like many other "self-made" men who have succeeded in life, he evidently possessed a flair for architecture. Certainly he had a gift for government and for administration. There is a strong case for recognising the Emperor Hadrian as a great architect. The case is not proven, and I find it hard to believe that Hadrian may not have claimed the credit for work done for him by architectural "ghosts," but, undoubtedly, there is a possibility that Hadrian did actually design buildings. Nothing is known of Diocletian's architect at Spalato, and when one realises that this great emperor abdicated his sovereignty in 305, to retire to a site adjoining his birthplace, one feels that at least he may have selected the exact position for his palace and probably given general directions to his technical advisers as to its lay-out and plan. Like many Roman towns (*e.g.*, Aosta in Italy, Chichester and Silchester in England), the rectangular plan follows the lines of a Roman camp, with two main streets intersecting at right angles in the centre, thus dividing the quadrangle into four smaller quadrangles. The streets were colonnaded, as was usual in Roman towns in the East (*e.g.*, Palmyra and Timgad). At Spalato there were three land-gates and one sea-gate. The main approach from the land was from the Roman city of Salona on the north. The site sloped up from the sea, so that the great walls, which were over 80 ft. high towards the sea, were only 57 ft. high at a point on the north. Sixteen massive towers rose above the circuit of the walls, one at each angle, two at each land-gate, and others intermediately. It was a stormy age; Diocletian had made many enemies, and he was taking no risks. The sea-front is a magnificent conception. This vast cliff of stone, some 600 ft. long and 80 ft. high, was lightened by a beautiful colonnaded *cryptoporticus* or open gallery running along its entire length. From this fine promenade, commanding views of the blue Adriatic, opened a palatial suite of apartments, public and private, including baths and a library. Within the two southern quadrangles stood two temples, still practically intact, one octagonal and the other rectangular. It is well known to architects that Diocletian's palace is not only important by reason of its size and its monumental lay-out: it also contains the germ of mediæval architecture in the new use that is made of arcades.

Fig. 6.—The Peristyle of Diocletian's Palace, after Robert Adam, 1764.

Fig. 7.—The Peristyle of Diocletian's Palace to-day.

As one sees it to-day, it has sadly changed since Adam's time as regards the view from the sea. Modern buildings have been erected on a new quay built in front of the old sea front for about half its length. On the right of the Romanesque *campanile* that was built by Diocletian's octagonal temple (now the cathedral) in the middle ages may be seen the sturdy angle-tower of the palace, but most of the remainder is lost in a jumble of roofs. To the left of the new buildings the quay recedes back nearly to the old façade, but even in this half of the front the effect is largely destroyed by modern buildings, though a few bays of the colonnading still stand out above shops and houses. But the whole circuit of the external walls is still easy to follow, and for a large part o

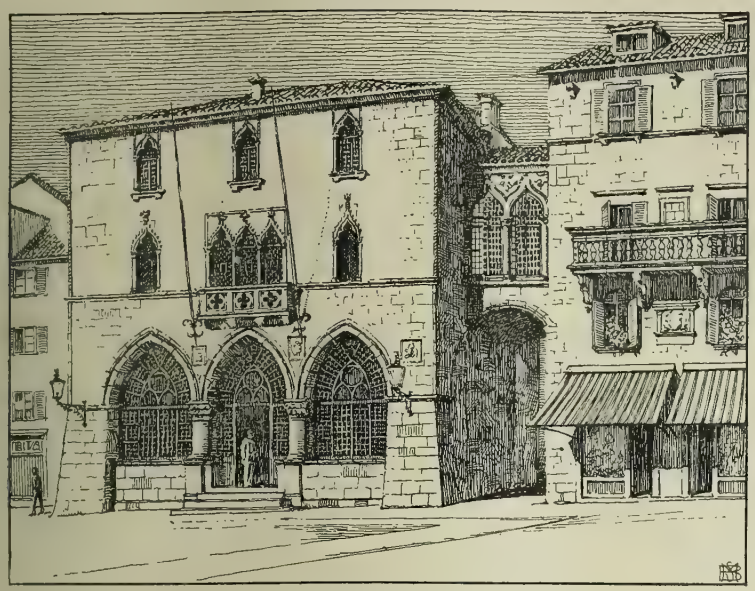

Fig. 8.—**The Old Town Hall at Spalato.**
Drawn by Mr. M. S. Briges.

their length they are preserved with their gates, while the Porta Aurea (the principal gate) is almost complete. Within the walls so much remains in the central portion of the palace that its former magnificence is easily recalled. The two temples and the peristyle between them are in excellent preservation, and in my opinion have suffered little from restoration. Figs. 6 and 7 show a corner of the peristyle as it was in Adam's time and as it is to-day. By comparing them it will be seen that little has changed here during the last century. Probably the palace would have been altered very little, so massively is it built, had it not been occupied first as a town in the seventh century, when refugees from the neighbouring Roman town of Salona flocked within its massive walls to escape the fury of barbarian invaders from the east. Gradually it was altered and built up till only the portions that I have mentioned remained intact, and its octagonal temple came to be used for Christian worship soon after Diocletian's death, a curious fate for the shrine, if not the mausoleum, of one of Christendom's bitterest enemies.

Apart from the palace and its mediæval accretions, including the beautiful *campanile*, there are few buildings of note in Spalato; fig. 3 represents the "Old Town Hall," a restored relic of the Venetian period, which might well have come direct from the Grand Canal itself, for the long centuries of Venetian rule over most of the Dalmatian towns explain the character of their architecture.

An architect visiting the town should not fail to see the very interesting collection of relics from Salona preserved in the museum at Spalato. The venerable *monsignore* who explained them to me was there more than forty years ago when Sir Thomas Jackson was studying Dalmatia. Salona itself is something of a disappointment, for though the ruins are extensive enough they consist mainly of foundations. An excursion there from Spalato may be combined with a visit to Clissa, a remarkable mediæval fortress perched on a rock high among the mountains which encircle the city.

Still more interesting architecturally are the towns of Traü and Sebenico, within reach of Spalato by motor-car. Both are full of Venetian, Gothic and Renaissance buildings. At Traü the *campanile* (fig. 9) and west doorway of the cathedral should be seen, also the Palazzo Cippico and some of the smaller churches. Sebenico is a larger place, but its chief architectural attraction is the really remarkable cathedral with a stone barrel-vaulted roof and cupola erected in the fifteenth century by Giorgio Orsini, and the Loggia (1522) opposite to it in the Piazza. All these buildings are described and illustrated in Sir Thomas Jackson's *Dalmatia*.

(To be concluded.)

An Engineer's Estate.

Mr. John Harold Woodward, M.Inst.C.E., M.I.E.E., of Ness Cottage, Hillsleigh-road, Campden Hill, W., and of Queen Anne's-gate, S.W., electrical engineer, left £61,420 (net personalty £59,341).

Fig. 9.—**Trau. The Cathedral.**

"THE INTERPRETER GEDDES"*

It is as well to explain at once that this interesting book is about Professor Patrick Geddes. We will assume that our readers know much about Professor Patrick Geddes; and we feel sure that the more they know the more they will enjoy this conscientious biographical study of one who, in the estimation of many people, "stands as a vigorous institution rather than a man." Mr. Lewis Mumford, in a preface to the book, suggests some such definition, in sense if not in actual words. The late Israel Zangwill contributed an introduction (covering 32 pages) to Miss Defries' book, and we shall possibly do the greater service in quoting what he wrote: "In playing the Boswell to Geddes, as well as in sketching his main doctrines, Miss Defries enables the full personality of the sage to impinge upon us, and she is to be congratulated upon the share her unpretentious work must have in diffusing some of the most seminal ideas of our own generation, and in bringing a prophet to honour in his own country. . . . And if Professor Geddes cannot be called the father of all who handle civics and reconstruction, he is, at any rate, the big brother, and it is in his architectonic personality that all these characteristic movements and impulses of our day are gathered up." And so Mr. Zangwill encouraged Miss Defries in her task. Her personal contact with Geddes commenced in 1913, in Chelsea, at Crosby Hall, when in answer to an urgent 'phone call she was told by Coventry Patmore's daughter-in-law, "I have been asked to rope you in for the Masque of Learning." The Professor was organising the "Masque," and the authoress was duly roped in. In the same year she was invited by Geddes to help him with his "Cities and Town-Planning Exhibition," a feature of the Ghent International Exhibition. There, in Ghent, she stayed for a year, helping the Professor's son Alasdair, who was killed in the war. All the incidents of the making of the British exhibit at Ghent are delightful reading, as are all the other chapters dealing *inter alia* with "Cities and Town-Planning," "The Outlook Tower at Edinburgh," "Art and Sex," "Cities in Devolution," "Scotland and France," and "Jerusalem." In the last-named connection there is a plan and elevation view of the University of Jerusalem designed by Professor Patrick Geddes and Mr. Frank Mears. The building of the Hebrew University was one of Geddes' earliest dreams in life. As he says, the Old Testament has dominated Scottish education and religion for centuries. In a letter to Miss Defries he wrote: "I have been fortunate in getting the assistance of Frank Mears, who has given me my long-dreamed Dome of Synthesis with hexagon-base—the historic Star of David as well as the expression of the unification of the arts and sciences in life anew—really fine architectural form—more 'floating' than ever before, so that, where the pillars stand which support other domes, he hangs the lamps." And it is a pleasure to read all that Miss Defries records of what the great mystic has told and written to her of his dreams and beliefs about the re-Judaising and re-Christianising of the Golden City, wherein Jew and Gentile are to live side by side in perfect amity. Patrick Geddes is a veritable Hercules for work, who "believes in building the Kingdom of Heaven from the earth upwards — rather than hanging from the sky rope-ladders which never reach the ground."

Sketches of Old London.

We illustrate this week some sketches of Old London by Mr. Joseph Pike. Subjects such as those which the artist depicts are rapidly disappearing, and sympathetic records of these fragments of an older London have an architectural as well as a sentimental value and interest that become greater with the passage of time.

The Gresham Hotel, Dublin.

The Gresham Hotel was one of the many buildings which were destroyed during the disturbances of 1919. Mr. Robert Atkinson, F.R.I.B.A., was entrusted with the charge of preparing plans for the new building, which is part of the scheme for the rebuilding of O'Connell-street approach by the Institute of Architects of Ireland. The hotel façade is designed on the lines of the late eighteenth-century Dublin building tradition, and this façade in Portland stone is very dignified, as our illustrations show. The hotel's site is about 180 ft. deep by 120 ft. wide, and the ground floor comprises a large winter garden round which are grouped the large restaurant, a smaller restaurant, the ballrooms (not yet built) various retiring rooms and cloakrooms, and, of course, the main entrance hall. There is provision for about 120 bedrooms, a proportion of which have bathrooms *en suite*. The basement contains yet more public rooms including a grillroom and smoking-room. The decorations of all the public rooms and bedrooms have been carried out in tasteful style, and the introduction of fine wrought iron work — both for the chandelier and various hanging and wall lamps and for the fine *marquise* to O'Connell-street—furthers the atmosphere of taste that runs through the whole building. The kitchen is fitted on most modern lines, including a refrigerating plant. The heating throughout the hotel is on the panel system, whereby the walls are heated, and no pipes, radiators, or grilles show. For the convenience of guests, a garage has been built at the back of the hotel.

The general contractors were McLaughlin & Harvey, Ltd., Dublin; and amongst the principal sub-contractors were :—Lambourne & Co., Manchester, David Colville & Co., Manchester, steelwork; Richard Crittall & Co., Ltd., London, heating and ventilation; Cosgrave & Co., Dublin, sanitary fittings; A. G. Brutz, Dublin, electric lighting; Carter & Co., Poole Dorset, Carterazzo mosaics; T. B. Colman & Sons, Ltd., Hove, Sussex, revolving door; Bostwick Gate Co., London, Bostwick gates; Richard Crittall & Co., London, kitchen fittings; Waygood-Otis, Ltd., London, electric lifts; Sturtevant Engineering Co., London, vacuum-cleaning installation; Trussed Concrete Steel Co., Ltd., London, Hy-rib reinforcement; Alex. Malcolm & Co., Dublin, plastering; Automatic Sprinkler Co., Ltd., Radcliff, near Manchester, fire hydrant; Roberts Adlard & Co., London, roofing tiles; Pinchin, Johnson & Co., Ltd., London, paints; Hobbs, Hart & Co., London, strongroom and locks; G. Matthews, Ltd., New Cavendish-street, London, fireplaces; Walter Macfarlane & Co., Glasgow, metal fanlights; O'Hara & Co., Dublin, fitting of Luxfer metal windows and Luxfer pavement lights; Brooks, Thomas & Co., Dublin, fitting of Crittall steel doors and screens; Bagués, Ltd., London, entrance canopy, bronze handrails, and wrought-iron balustrades; Hollis Bros., Hull, wood-block floors; Building and Insulation Co., London, Binal partition blocks; C. W. Harrison & Son, Dublin, marble work; J. Logan & Co., Dublin, marble paving; and Charles Macintosh & Co., Manchester, rubber flooring.

Wandsworth County School, Southfields.

The Wandsworth Secondary County School was established by the Governors of the Wandsworth Technical Institute in September, 1895, and has now been transferred to new premises and placed under the control of the London County Council as from September, 1927. The school (including site, buildings, and furniture) has cost approximately £70,000, and has been erected on a site of about seven acres facing Sutherland-grove, Southfields. This site has a sharp fall in the ground diagonally from the north-west angle towards Sutherland-grove. The school building is set back from the road on the highest portion of the site, the portion in front and at sides being reserved for playing-fields, tennis courts, and tar-paved playground. The building is planned around three sides of a quadrangle, that to the front being left open above the entrance screen wall. The principal entrance is from the quadrangle and admits directly to the assembly and dining-hall.

The south wing is occupied on the upper, ground and first floors with classrooms, and there are additional classrooms on the west side of the hall and on the east front of the quadrangle, 18 rooms in all, providing accommodation for 505 boys. On the north wing are situated the gymnasium, art room, and the science laboratories over. The kitchen quarters are adjacent to the hall on

PARTHENON STUDIES.

By W. R. LETHABY.

VII.—THE FRIEZE—*Continued.*

I now offer a restoration of the head of emeter, which is destroyed except for aces of the outline (Fig. 3). She only of all e assembled gods seems to be alone, and she ans forward in reflection with her raised ght hand touching some drapery. The ly place in which I find any interpretation ggested is in some of the beautiful old ustrations in the Museum books (Ellis, 1833 r example). In these the drapery just entioned seems to be understood as a shawl the shoulders. It was rather the remain- g traces show a veil covering the head ig. 3). Compare a statue of Demeter at the point of departure. A small photograph of the drawing is shown at the Museum under the Aphrodite, and included in *Sculptures of the Parthenon*, while a large reproduction of the same drawing was given in *The Builder* about the same time. Part of the bust of the relief of Aphrodite is lost, but the way in which the sleeve falls on the arm shows that it had slipped down, uncovering the shoulder, just as the drapery of the great pediment statue does; her feet were crossed and her left arm was extended. The female companion, against whom she leans, also resembles the companion of Aphro-

Fig. 3.

erlin, where the hand is raised as on the ieze. Since writing this I find that Kekulé d Schrader would identify the original atue, of which this and another at herchel are copies, as a work of Pheidias. o find the exact type in the Parthenon is important point of evidence. The statue s a veil over the head, leaving the front ir exposed, and falling over the shoulders actly like the figure on the frieze. Several the famous grave slabs at Athens were idently inspired by the mourning Demeter the frieze, and in them we find the veil d raised hand (Fig. 4, the grave slab of acrestrate, is one of these). The noble meter of Cnidos in the Museum has a ilar type of veiled head.

In 1909 Mr. J. E. Platt, then at the Col- e of Art, made a restored drawing of the ires of Aphrodite and her companion at suggestion. I had been impressed by likeness of the Aphrodite to the reclining idess in the east pediment, and that was dite in the pediment. Either the pair bore the same names in both places or there was an artistic fault in making them so much alike. The companion figure on the frieze is now generally named Artemis, but no one would suggest this identification for the figure in the pediment. On the other hand, Dione or Peitho have been put forward. Petersen named both the great figure and the relief Peitho. Michaelis gave this name to the relief, and Pottier has argued for the identification (see Collignon). Furtwängler, who decided for Artemis, himself wrote: "The female figure is supposed to be either Artemis, or, on account of her proximity to Aphrodite, Peitho; finally, Dione, the mother of the goddess of love, has been suggested as also in the eastern pediment." Of this figure, which he decides to call Artemis, he adds: "The goddess probably held a flower in the daintily raised right hand." May we not believe that Artemis would have held a more significant attribute than this? But I doubt the flower; I had been puzzled by the gesture of this figure, her hand held up and forward with the fingers drooping, until one day, while doing a careful piece of work with my right hand, I found my left in a similar position. It is a typical gesture with dancers, and some of the riders of the frieze have a hand lifted in a similar way; it seems to be a natural reaction to close attention. The goddess is absorbed in watching the procession.

Finally, I find that Lechat calls the figures in question Dione and Aphrodite, both those in the pediment and in the frieze. This is done without any discussion, but on the whole I believe this is the best solution of the puzzle. The conditions are: (1) The pair of figures are the same in the pediment and on the frieze; (2) The reclining figure of the frieze is certainly Aphrodite; (3) The reclining figure in both cases is supported by another in such a way as to suggest relationship. Since Mr. Platt and I made our restoration a fragment of the missing foot of Aphrodite's companion has been added; it rested on the toes, to lift the knee against which the other figure leaned.

Beyond the gods, between them and the head of the procession, are two groups of men spectators, who have been called magistrates. "Perhaps they may be the ten Athlothetae who controlled all the arrangements: they have also been interpreted as mere typical citizens; recently attempts have been made to identify the ten figures with the ten legendary heroes whose names were given to the ten Attic tribes." Some years ago, in working at the sculptures of the Temple of Ephesus, I came to the conclusion that the reliefs carved around some of the columns might best be explained as representing a birthday procession to the temple, and that one group of figures were citizen spectators, men, women, and children. The subject was traditional, but the actual design seems to have been inspired by the frieze of the Parthenon, and this is in favour of the simplest explanation being given to the groups of spectators on the frieze. At Ephesus as well as at the Parthenon, objects preserved in the temple treasury were carried in the procession.

Fig. 4.

The procession of the Parthenon frieze is headed by two marshals who come close up to the groups of citizens. The marshal on the left had a fragment with a foot on it attached to the figure, which, in 1924, I was able to show was a woman's foot. I had been long convinced that it was too small and delicate for the male figure. Looking for a place which would receive the little piece I could only find the position between figures 2 and 3 of the frieze. A drawing of 1674, however, shows the foot of 3 in a different pose. Mr. Arthur Smith, the Keeper of the Department, was good enough to make the trial, and it was found that the broken edges fitted together accurately, thus showing that the artist, drawing from a distance what was partly hidden by a projecting band along the bottom of the frieze, misread what he saw. This small readjustment has resulted in quite a considerable restoration of the figures 2 and 3.

Some restorations may be made by the help of the old drawings of 1674, Pars and others. Fig. 5 was drawn for me many years ago by a student at the College of Art by comparing the existing remnants with the engraving of Dalton. Much more remains of Fig. 6, but it is badly damaged in the upper part.

Many vase paintings derived their designs from the frieze. A vase painting figured in the *Archæologische Zeitung*, 1878 (see also Reinach, Vol. I, 333), which represents a

youth about to mount a horse, is copied very accurately from the group 25 on the south side which is now in bad condition. For a group of Aphrodite, and Eros holding a parasol, see Reinach's Vases I, 99; and in the same collection are figures of Aphrodite fully draped which resemble the sculptures of the frieze and eastern pediment. Another

Fig. 5.

little point which may here be mentioned is that there must be some mistake of adjustment between two slabs on the south wall of the Museum gallery, on which is a chariot with a warrior whose arm is thrown backwards (No. 68). An inch or two too much room has been given at the junction of the slabs so that the man's upper arm is impossibly long and awkward. Notice that the man's head is turned round and his left shoulder must have come close up to his chin; the body, moreover, is too wide (Slabs XXIII and XXIV).

Painting and Gilding.—Examination of the frieze will show that certain details required colour to explain them. Hera's veil, for instance, is for the most part like the plain background (Fig. 1), and would need to be brought out by colour. A large patch of dark colour on a white ground seems still to remain on an uncleaned fragment, the inside of a shield on Slab XXIV. Details were also added in colour, some of which have been mentioned. I have found dim traces of eye-pupils, and Pars showed these in many cases.

About 1800 the slab in the Louvre was described by A. L. Mellin in these words: "Before this precious marble had been cleaned it retained traces not only of encaustic colouring, which according to usage the Greeks applied to sculpture, but also of true painting, of which some parts were covered, a custom belonging to the processes of the infancy of the art of which it is not yet free. The ground was blue, the hair and some parts of the body were gilt." The tone of apology gives this testimony all the greater weight.

Westmacott, the sculptor, an earnest student of the marbles, wrote in 1854 "the darker and decided colour of the background —for it appears on examination that even now there are many remains of blue colour discernible—may be accounted for as a means of giving distinctness to the figures." He objected to the effect of some casts which had a harsh blue background, and added: "But the grey, white, black, and brown horses, and their flesh-coloured riders, with their gilded hair, so perfect in their simple art, are here degraded into toys" (*Archæol. Journ.*, Vol. XII).

A trustworthy old German scholar, O. Müller, also wrote: "There are traces of gold and painting on the draperies and hair." Again, a writer in the *Revue Archéologique*, 1880 (i, 325) refers to "the tender gilded reliefs of the frieze."

Dodwell described the frieze of the Theseum: "The armour and accessories have been gilt, the drapery is generally green, blue or red; the open air is painted blue." A fearless restoration of the colouring and gilding of the central slab of the Parthenon frieze has recently been illustrated by Dr. A. B. Cook in his *Zeus*. Such a coloured print is necessarily harsh, and fails, just as the drawing does, to suggest the grace and sweetness of the original, but looking on it as a diagram it may be said that the whole frieze was painted and gilt much like that. It should be welcomed as a bold advance. It would be an easy thing to get casts of parts of the frieze restored by a modeller and to have them painted and gilt. If the help of some of our many Art schools was called in, surely such practical work as this would be really instructive in the sea of abstract teaching as how to do nothing in particular. Again, the experiment might be made of lighting one or two slabs from below to see how they would appear under the conditions of light for which they were wrought.

Execution and Date.—The workmanship of the frieze is astonishingly minute and accurate, it is very different from what modern critics teach us as "artistic." At the centres of the wheels may be seen the mark of a compass. The execution may best be studied at the Louvre, where a well-preserved slab is placed so low that it may really be seen the heads being nearly on the sight level. I have noted "Even the veins of the hands and creases on the palms and over the knuckles are indicated: compare the soft little hands and delicate nails of the women polished finish." The hands throughout are almost specially wonderful; see, for instance those of Ares clasped over his knee at the British Museum.

The frieze is generally described as "a continuous band of sculpture in low relief." Yet it is hardly low relief as strictly understood. Many details are undercut, and the profile faces are often relieved from the ground in such a way that more than half the face was represented, the nose being free and the further eye indicated. The general manner of the relief was to define the edges sharply against the background and to preserve a flat surface; that is, as much as possible of the original plane face of the slab was maintained. This indeed is the typical principle of relief sculpture as differentiated from modelling. In sculpture the evidence of the block from which it was hewn must remain.

The upper part of the torch of Demeter was entirely detached from the ground, so were some horns of the cattle; parts of chariot wheels were not only free from the ground but in places some details were indicated on the ground behind the wheels. The lifted hand of Apollo, which is broken away must have been free from the ground. Notice that this balanced the undercutting of the torch of Demeter. The woman in the central group extended a hand which was partly undercut, and the girl next to her seems also to have had a hand which was free from the background.

The drill was very largely used in the carving: not only were little accented points formed by the drill, but in the furrows of the drapery chains of drill-marks may be seen. The right hand margin of the extended veil of Hera is outlined with a row of drill marks. The drill was the favourite tool of the sculptor of this part of the frieze. The figures seem to have been finished to a polished surface. On the background marks of a fine claw tool or drag may be observed.

The way in which the general subject matter of the frieze is related to the group of slabs proves that the whole design must have been settled before the slabs were cut to size. At the same time it is clear from

Fig. 6.

e way in which the joints come at suitle places that the final drawing of the sign depended on an exact knowledge of e size of the slabs, and that it was done place most probably. The perfect conuity of the work over the joints shows th certainty that the actual carving must ve been done after the slabs were fixed. e may not doubt indeed that it was rought after the peristyle was covered by e roof and under the conditions of lightg that it would receive in the completed ork. The fitting of the bronze accessories nd the finishing of the work with painting nd gilding would require a scaffolding, and oubtless this completion was done from the me scaffold that the sculptors used. Prossor Beazley, in the most recent word on ne subject (1927) gives, from an interpretaon of the records, the following dates to ne sculptures: "447 to 442 for the metopes, 42 to 438 for the frieze, and 438 to 433 for ne pediments," but it would require very recise records to convince me that the work as divided up in such a way. Furtwängler lso said: "The pediments seem somewhat ater than the frieze." On the other hand, here are some correspondences between the gures of the gods on the frieze and those f the eastern pediment which were above hem, and it is reasonable to suppose that he lesser followed the greater work. The gures of Aphrodite and her companion in he frieze seem to be copied from two of the o-called "Fates" in the pediment. We nay hardly doubt that the master in charge of the sculpture foresaw and "designed" the most important task at the very beginning f the time, and that work on the great sculptures went on concurrently with the building. From merely practical reasons the great figures, we may suppose, were pressed forward so as to be ready as soon as the structure was ready to receive them. The main scaffolding would have been needed for raising and fixing them, so that nothing was finished until they were in place, and, further, the serious work of adding the bronze-work and doing the painting and gilding even then remained. We might easily think that the frieze was the last work undertaken.

ONE-ROOMED FLATS.

On a site adjoining Ashtead Park, "The United Women's Homes Association," founded in order to meet the needs of single or widowed women who find difficulty in obtaining suitable accommodation, have erected a number of one roomed flats that can, if necessary, be converted into three-roomed family flats. There are a bathroom and w.c. to each three tenements: hot water is obtained from a geyser, controlled by a separate 1d. in the slot meter in each bathroom. The rent of the one-roomed flats is from 5s. to 6s. a week. This experiment, it is reported, has proved so successful that some 80 one- and two-roomed flats are now being built in the Hampstead Garden Suburb, while at East Acton, on a site overlooking the White City, one-roomed flats are being arranged on three floors running around a central courtyard. Each flat comprises a living room with a bed recess at one end, and at the other a work recess containing a sink with draining-board, a small gas cooker of the oven-griller type, a 5-ft. bath with table top fixed, a geyser for the supply of hot water, a built-in larder, and two store cupboards.

Mr. Barry Parker, F.R.I.B.A., is the consulting architect.

"Old Cotswold Lines."

Mr. George Frederick Moore, of Burton-on-the-Water, Gloucestershire, has empowered his trustees to convey free to suitable persons land for building (including land for a garden) on the left-hand side of the new road leading from Burton-on-the-Water to the station (the right-hand side is not to be built on), provided that the buildings to be erected thereon shall be erected "on old Cotswold lines," and the plan and design approved by his trustees.

THE SCOTTISH AMERICAN-WAR MEMORIAL, EDINBURGH

One of the most hopeful signs about international relations to-day is the increasing friendliness between English-speaking races. This generous War Memorial, gift of naturalised Americans of Scottish birth or extraction is a fitting and sincere expression of the bond which unites them to the old land. Much has been written and many photographs have appeared in the Press about this Scottish-American War Memorial in Edinburgh, but we feel that it is only fitting that we should add our tribute to what has been said.

To the late Mr. John Gordon Gray, a scholar and thinker, President of the St. Andrew's Society in Philadelphia and an officer of the Transatlantic Society, the whole credit of the idea of this memorial must be given. To Dr. Ellis Paxson Oberholzer, his friend, and Secretary of the English-Speaking Union, and a well-known historian, fell the carrying on of the negotiations after Mr. Gray's death, which made the final realisation of Mr. Gray's dream possible. Other names which must be recorded as having given their time and labour to the furthering of the project are:—Mr. John Peter MacBean, Past-President of the St. Andrew's Society, Philadelphia; Mr. John Cochrane; Mr. David Halstead; Mr. Benj. R. Hoffman, President of the St. Andrew's Society, 1927; Rev. Alexander MacColl, Chaplain; Mr. A. Reed McIntyre; and Mr. Hilson H. White.

Space will not permit of a detailed account of the various sketch models and designs for this memorial or the controversy as to the best site and the various sites suggested and discussed. The site finally adopted is certainly a romantic one. On the main walk on the upper terrace of Princes-street gardens which runs from the west end to the Mound, at the foot of the upper sloping bank and axial with the centre line of Castle-street, it occupies a prominent position. For three generations Edinburgh architects have been trying to persuade the town council to raise this sloping bank into a terraced walk, but if this is ever done now this Scottish American War Memorial will either have to be incorporated with this terracing or removed to another site. But who can tell what future town councils, or even present town councils, will do?

The difficulties of carrying out this Memorial must have been great with the architect on one side of the Atlantic and the sculptor on the other. Dr. Tate McKenzie, of Philadelphia, was the sculptor, and Mr. Reginald Fairlie, A.R.S.A., the architect. Messrs. Colin Macandrew were the builders, and Mr. Alexander Carrick, A.R.S.A., was sculptor for the stone carving and lettering. Dr. McKenzie visited Scotland several times and made his studies from the soldiers at Redford Barracks for his figure frieze.

The Memorial consists of a screen wall with parclose return ends, with pedestal dies and cavetto inverted trusses at the ends of the main frieze. Projecting piers run up through the curtain wall at the ends of the bronze frieze. A stone seat runs right round the whole inner face and abuts between the pilaster piers. On a raised platform in front of this curtain wall is seated a colossal figure of a Highlander on a plain pedestal block. The stone of the memorial is from Ravelston quarry, and is the finest sandstone in Scotland for work of this description. The figure of the Highlander and the frieze are in bronze.

The whole figurework of the sculpture is of a realistic nature and will appeal to the minds of the people. In the twelfth, thirteenth, fourteenth and fifteenth centuries (speaking of Gothic work) sculptors were undoubtedly of the common people, and the common people understood the somewhat archaic and decorative types of work done during these centuries, but now art is largely unrecognised by the lower classes, and it is doubtful if they understand or appreciate anything but realistic art. In Gothic times we occasionally find sculptors who, in great moments, rose to an almost classic perfection in their art, St. Margaret's of Lincoln being probably one of the finest examples of stone figure work in this country executed during the middle ages. Of animal figure work in the same class, but somewhat more realistic, we have the famous lizard corbel in the north choir aisle at Wells Cathedral.

The figure of the Highlander seated with his rifle across his knee, ready to spring to his country's call, is symbolic of Scotland, and his earnest gaze, directed toward Edinburgh Castle, which crowns the rock in front of him, suggests that its traditions of a thousand years of fighting warriors has inspired him to play his part in the great struggle at any price. The pedestal is 3 ft. high, and on it is inscribed: "The Call, 1914." "A tribute from Men of Scottish blood and sympathies in America to Scotland." "'A people that jeopardised their lives unto death in the high places of the field.' (Judges v, 18)."

Behind this bronze figure is the curtain wall with a bench. The wall rises to a height of 14 ft., and contains a frieze 25 ft. long by 4 ft. high, showing the response to the call. The frieze is divided into three sections. The figures are all marching to the right, as if making for the Waverley station to entrain for Glencorse *en route* for France. The first group depicts "the pipes;" the second a recruiting party; and the third a band of recruits consisting of miners, shepherds, farm servants, clerks, gamekeepers, fishermen, and various other types of men who joined the Standard to fight in freedom's cause. From a regimental point of view, the step of these men seems rather long, but this artistic licence is no doubt to show their eagerness to answer the call. Artistically, as a composition, we feel that if this frieze had been designed on a central axis (unsymmetrically but balanced, of course) it would have been finer. In the work of such men as Donatello or Benozzo Gozzoli (in painting) such a frieze as this would have been continuous round the four walls of a room. However, we do not make this criticism in any ungenerous spirit, and we fully realise how ably Dr. McKenzie has interpreted the spirit of the age. Mr. Reginald Fairlie is to be congratulated on the simple and effective manner in which he has designed and detailed the architectural setting to show off and harmonise with the sculpture.

The two ceremonies connected with the unveiling were notable for their picturesqueness. At the Usher Hall the mediæval touch was given by the town councillors in their robes of scarlet and ermine, and the mace- and sword-bearer, and the halberdiers with their pikes. On the platform, with the councillors on the right and our American friends on the left, we had a subject which must have delighted the heart of any decorative artist present.

In the afternoon, in brilliant sunshine, the memorial was unveiled, and the simple impressiveness of the proceedings was all that could be desired. Dr. McKenzie, Mr. Reginald Fairlie, and all concerned in the success of this undertaking, deserve the wholehearted thanks not only of natives of Edinburgh but of all Scotland.

Stone Merchant's Estate.

Mr. Edward Edwards, J.P., of Penlan House, Quaker's-yard, Merthyr Tydfil, Glamorgan, retired stone-merchant, who died on February 22, aged 82, left £4,523, with net personalty £4,407.

ELEVENTH INTERNATIONAL CONGRESS OF ARCHITECTS

AUGUST 29 TO SEPTEMBER 4. THE HAGUE, ROTTERDAM AND AMSTERDAM.

(*Continued from page* 381.)

THIRD SESSION.

THE third business session of the Congress took place on Thursday, September 1, in the Hall of the University, Amsterdam, under the chairmanship of Lt.-Col. H. P. Cart de Lafontaine (Great Britain). The proceedings opened with a brief address of welcome by Alderman J. ter Haar, representing the City Council. This was followed by the reading of congratulatory telegrams from various foreign delegates and members of the C.P.I.A. who had been unable to attend the meetings of the Congress.

The Chairman then introduced the subject for debate—the question of the professional status and duties of the architect as an "Architecte Conseil," or as an "Architecte Constructeur." He asked delegates to limit their contributions to the discussion to ten minutes and not to waste time in reading the communications and reports already printed in the Congress handbook, which could be taken as read.

The Polish delegate opened the discussion and outlined some of the difficulties which the question presented in his country. In his concluding remarks he said the Polish delegation wished to submit a resolution that the title of "architect" should be reserved to men with a professional and technical training, and that all members of a properly constituted architectural society should be forbidden to act as contractors as well as architects.

Mr. Fairweather (American Institute of Architects) outlined the distinction between architects and contractors in the United States of America, and said there was no act protecting the title of architect in his country, but that in the various professional societies limited to architects the rules of professional conduct were strictly observed.

He also referred to the publication by the A.I.A. of books of standard designs for small houses, which, he suggested, might afford a solution of the difficulty of producing good designs for cheap housing.

Herr Bierbauer (Hungary) supported the proposal that the Congress should pass a resolution in favour of the separation of the functions of the *Architecte-Conseil* and the *Architecte-Constructeur.*

Herr Franseck (Hungary) suggested that what was necessary was that the title of "architect" should be protected by the State and that a clear distinction should be made between the functions of the *Architecte-Conseil* and the *Architecte-Constructeur.*

Sig. Calzabene (Italy) said that architects and engineers in Italy belonged to professional societies (Syndici) for each profession; if they acted as contractors they must cease to be active members of the professional society and join one of the syndicates of contractors and builders. He was not quite clear as to the exact significance of the terms *Architecte-Conseil* and *Architecte-Constructeur.*

Here a delegate interposed a question. "Does the architect prepare plans, etc., and hand these over to another 'architect' whose sole concern is the supervision and direction of the works?"

Signor Calzabene replied that this had been the customary procedure in Italy up to last year.

Herr Schluckabier (Germany) said that in Germany there were about 2,000 architects and 4,000 contractors and builders. The architects felt the pinch of competition from municipal architects on the one hand, and contractors and builders on the other. There appears to be a general view in Germany that anyone could build and that an architect was an unnecessary luxury. In their country the architect could completely control all building, and he could be either the "private architect" (*privat architect*) or the architect-contractor. He concluded by expressing the hope that the Congress would pass a resolution supporting the view that there should be a complete separation between architects and contractors.

Señor Bermudes (Portugal) observed that in Portugal this question did not arise, as there was already a complete distinction between the profession of architecture and the work of the contractor.

Professor Jezek (Czecho-Slovakia) said there was no legal protection for the title of architect in his country. He thought a law protecting "free architects" was necessary and desirable.

Ir. Otter (Holland) remarked that the situation in Holland was difficult, because their architects were sharply divided on the question of whether the architect should also carry out building works or whether he should be merely the professional adviser. He suggested that no resolution limiting or defining the functions of the architect should be voted by the Congress, as in some countries (and especially in Holland) it would produce a difficult situation (cries of dissent). He suggested, as an amendment to the proposed resolutions, "that the XIth International Congress of Architects, having heard the views of all delegates, considered that the relations between the *Architecte-Conseil* and the *Architecte-Constructeur* should be deferred until agreement had been reached in each country represented."

M. Antonescu (Roumania) said that the great majority of architects in Roumania are builders as well as "*diplomés.*" In Bucharest they had succeeded in getting the municipal council to pass an Act whereby the building owner was obliged to employ the architect who signed the plans submitted for approval to carry out the work of construction. He hoped the Congress would pass a strong resolution on the subject of the profession of the architect and the business of the contractor, and suggested this should contain a clause urging the Governments of all countries to insist that architects should belong to some professional society or syndicate limited to qualified architects only.

Ir. Blauw (Holland) supported this proposal. He considered that an architect should be remunerated by fees only and not by the profits of a contracting business.

Ir. Otter (Holland) rose to oppose the proposed resolution which he thought would not be accepted by a number of well-known Dutch architects.

M. Antonescu (Roumania) then suggested that all that was essential was for the Congress to pass a resolution defining the functions of the architect and of the contractor.

Signor Annoni (Italy) rose to explain that the Italian delegates had not clearly understood the meaning of the words *Architect-Conseil* and *Architecte-Constructeur* when his colleague Sig. Calzabene had spoken. In Italy the architects and the contractors were separate and distinct, but in large undertakings a second architect was sometimes employed to take charge of the work of construction.

Herr Schluckabier (Germany) remarked that they seemed to want some clear answer to two questions: "What is an architect?" and "What is a contractor?"

Lt.-Col. Cart de Lafontaine (Great Britain) said that in England the conditions under which architects practised were strictly professional. An architect was a professional man and was remunerated for his services by fees only; a contractor was a business man and received profits on his various undertakings. The speaker then gave one or two recent examples of the manner in which infractions in the rules of professional conduct by their members were dealt with by the R.I.B.A. for such cases as advertising, participating in a business such as that of a contractor or estate agent, etc., and said that the essence of the matter under discussion seemed to lie in the enforcement of a strict discipline by professional societies, as it would not be much use saying an architect could not also be a contractor unless there were penalties for infringement of this rule. He agreed that the definition on the agenda was somewhat confusing, and suggested that in drafting any resolution to be passed by the Congress it would be better to use the words "architect" and "contractor" to distinguish the two distinct functions which they were considering.

M. Verrey de Sinner (Switzerland) explained the situation of architects in his country, and supported the proposal that a clear distinction was desirable between the functions of the architect and the contractor.

Señor Bellido (Spain) said that in Spain the title "architect" was protected by law and was reserved for properly qualified men who could not also be contractors.

The Chairman then read the various draft resolutions which had been submitted by delegates, and said that he proposed first to put the resolution drafted by the Italian delegates in consultation with M. Poupinel, General Secretary of the C.P.I.A., as this appeared to give effect to the views expressed by the majority of speakers

This draft resolution was as follows:—

"The XIth International Congress of Architects, assembled at Amsterdam on September 1, 1927, takes note that the delegates of all countries are agreed that the separation of the functions of an architect and a contractor or builder should be clearly defined. It requests the Permanent Committee to prepare without delay an international code regulating the relation of the architect to the execution of his works and the rules of professional conduct with the object of finding a formula which should be applicable to all countries. The official delegates and the *Comité Permanent International des Architectes* are requested to take all necessary action to give effect to this resolution."

This resolution was unanimously agreed to on the Chairman's assurance that a paragraph should be added referring to the desirability of instituting professional societies restricted to properly qualified architects and that the amended draft should be re-submitted at the concluding meeting of the Congress.

The meeting then terminated.

FOURTH SESSION.

CHAIRMAN: HERR SIXT (Germany).

The fourth business session of the Congress was held during the afternoon, and consisted of a series of short papers on the progress of architecture, illustrated by lantern views of recent work in Belgium, Holland, Germany, and Norway. There was no discussion.

With this meeting the official business of the Congress terminated, except that after the lunch at Hilversum the various resolutions—as amended by the C.P.I.A.—were put to delegates and approved without further discussion.

Social Functions and Visits.

Having disposed of the business side of the Congress a few notes with regard to the social functions and the visits to new buildings may be of interest. The first part of our stay in Holland (writes one who was present) was at The Hague, which is one of the most attractive towns in Europe. Canals, tree-planted avenues and a large tract of unspoiled woodland are the special features one remembers. In actual fact we had little time to see the city until, on Wednesday, August 31st, a motor trip to the recently built suburbs gave a rapid impression.

The new quarters are especially interest

ing and quite different in their conceptions of architectural design from anything we have seen. The essential characteristic of this new expression of architecture is the importance attached to the mass, the courageous plain surfaces of beautiful brickwork of uniform colour and the preference for horizontal lines. Window openings are generally twice or three times as long as their vertical height, and long lines of balconies with solid brickwork fronts emphasise the prevalent horizontal lines. Cornices and architectural trimmings are rigidly suppressed, but in some instances a freakish tendency is shown in joinery, which is inferior to the brickwork in design and execution.

The effectiveness of these new housing schemes is largely due to the subordination of the individual house to the composition of a whole street, and this, while artistically satisfactory, does not seem so attractive from the point of view of the architect. In the majority of cases it appears that at The Hague, at Amsterdam and other towns the plans for these new buildings are prepared, either by the builder employed by the co-operative building society, in which case the architect has to fit a façade as best he can for a small fee (the figure for £2 per house frontage was mentioned in one case), or else the whole scheme is in the hands of an architect employed by the municipal authority. In spite of these obvious difficulties, the results are extremely interesting. A detail worth noting is that excellent effects are produced by raking back the joints in the brickwork about half-an-inch instead of pointing. This is especially effective in giving emphasis to certain parts of the façade in buildings of three or more stories. Space does not permit of a detailed description of the unusual effects produced by whole stories of brick on edge walling and various ingenious methods of bricklaying which appear to be quite possible in these artists in brickwork.

In the case of the ordinary country house for a private owner where the architect has more liberty the result is, at first sight, rather unexpected, as the majority of better-class building of this type follows much more on traditional lines and is apparently inspired by English work of a similar type.

Turning after this digression to the social functions, these included a banquet at the Hotel "De twee Steden" at The Hague on the first day of the Congress, at which Ministers of State and important personages made the customary speeches of welcome, and which was followed by an official reception in the Knights' Hall, or Ridderzaal, at the Binnenhof; a similar function at the new Town Hall in Rotterdam after a day of sightseeing, which included a motor trip round the town and a steamer excursion round the wonderful port and docks with a halt for tea at the air port of Waalhaven. On Wednesday afternoon, August 31st, a visit was made to the fascinating old city of Delft, and to the Technical University and school of architecture, under the direction of the President of the Congress, Dr. Slothuwer, who is also the Director of the School of Architecture, and, in the evening, on the party's return to The Hague, the municipality invited members to see the display of fireworks in honour of the Queen's birthday.

On the following day the delegates moved their headquarters to Amsterdam, and after a day of official business were received in the new Exchange buildings (by Berlarge) by the Burgomaster and City Council. Later still a most delightfully artistic soirée was enjoyed through the ingenuity and art of our hosts, the Federation of Dutch Architects (B.N.A.).

On Friday the morning was spent in a motor trip round the new quarters of the city of Amsterdam, lunch was taken at the "Y. Pavillion," and a trip round the canals in motor launches followed.

Next day a visit was paid to Hilversum, where some of the most interesting examples of modern Dutch architecture were seen. Especially attractive were the three schools by M. Dudok, architect to the Municipality of Hilversum, and members heartily endorsed the vote of thanks and appreciation accorded to the Burgomaster, the Council and their architect at the subsequent reception before leaving for Amsterdam to attend yet another function, a gala concert, which was graced by the presence of H.H. the Prince Consort.

The proceedings terminated with an official banquet, when farewell speeches and votes of thanks were made by the representatives of all the nations and cordially endorsed by those who had spent such an interesting and agreeable week in Holland.

SCHOOLS OF ARCHITECTURE, ART AND BUILDING

Glasgow School of Architecture.

The calendar has been issued of the Glasgow School of Architecture, which is under the superintendence of a joint committee representative of the Royal Technical College and the School of Art. For the purposes of the degree of B.Sc. in Architecture, the curriculum comprising the courses for the degree is recognised by the University of Glasgow, to which the Technical College is affiliated. The co-relation of office pupilage with the courses of study is provided for, and the Council of the Glasgow Institute of Architects approve the alternative schemes of study under which attendance at the School of Architecture is combined with the serving of an office pupilage. In the calendar particulars are given of the degree, diploma, and certificate courses, and of the scholarships and bursaries open to students.

Royal College of Art, South Kensington.

We have received the prospectus for 1927-28 of this college, whose principal is Professor William Rothenstein, M.A., A.R.C.A. (Hon.). The college comprises five main schools, viz., architecture, design, engraving, drawing and painting and sculpture, in which the teaching affords students opportunity to acquaint themselves with the broad principles as well as with the practice underlying each of these important branches of art. The School of Architecture, of which Professor J. Hubert Worthington, M.A., A.R.I.B.A., is the Principal, provides an auxiliary course for the schools of drawing and painting, design and sculpture. Students from these schools are expected to take a course in architecture unless exempted for some special reason. This course deals with the relation of the Arts to Architectural History and Practice; the spaces and forms of buildings that are decorated in colour or enriched with Sculpture; the employment of the Crafts in furnishing and completion; and the study of geometrical draughtsmanship for technical purposes. The syllabus includes historical study, embracing the arts and crafts associated with building, and lectures and exercises in design. Full particulars may be obtained upon request to the Registrar.

"Clerkenwell" Technical Evening Institute.

This junior Technical Evening Institute, which is conveniently situated at Compton-street, Clerkenwell, E.C.1, will reopen for its new session on Monday, September 19. Enrolment of students—under the direction of the head of the Institute, Mr. James Finch, will take place from September 19-23. Only students who were under 18 years of age on the 1st August, 1927, will be admitted (except for certain non-vocational subjects), and, unless attending a Day Continuation School, they will be required to attend for an approved course of instruction covering three evenings (six hours) a week. For the non-vocational subjects indicated in the time table students over 18 years of age will be admitted. Woodworking, carpentering, engineering, electrical and metal-working are amongst the various trades taught. Full particulars may be obtained from the Principal.

Manchester Municipal College of Technology.

The Manchester Municipal College of Technology has developed from the Manchester Mechanics' Institution, founded in 1824, in Cooper-street, until to-day it is of University rank and attracts students from all parts of the world. The Owens College, which was opened in Manchester in 1851, has grown into the Victoria University of Manchester. A Faculty of Technology in the University was established in 1905, with the Principal of the then School of Technology as Dean of the Faculty, and with the heads of the Mechanical and Electrical Engineering, Applied Chemistry, and Architecture departments of the School of Technology as Professors of the University. The Department of Architecture is now confined to Owens College. The University Courses provided by the College of Technology lead to the degrees of Bachelor and Master of Technical Science and Doctor of Philosophy (B.Sc.Tech., M.Sc.Tech., and Ph.D.). Amongst these courses are Municipal and Sanitary Engineering, and Building. The former of these is a three years course in the Faculty of Technology and leads to the degree of B.Sc.Tech. and to University Certificates. There is also a three years part-time evening course, leading to Associateship of the College. The Associateship Courses in Municipal Engineering, Sanitary Engineering, and Town Planing provide training for students wishing to qualify in the professional work associated with these branches of engineering. The courses also prepare students for the examinations in Sanitary Science and Engineering subjects conducted by the Institution of Municipal and County Engineers, by the Royal Sanitary Institute, by the Surveyors' Institution, and by the Royal Institute of British Architects.

The Building Course is a three years part-time evening course, also leading to the Associateship of the College. Architecture courses are provided at the School of Art, which include classes in building construction, sanitation and hygiene, held in the college of Technology. These courses prepare students for the examinations of the Royal Institute of British Architects. Special attention is invited to the part-time day courses in Structural Engineering and in Reinforced Concrete Engineering, which are designed to meet the requirements of draughtsmen and designers in these professions. Application for full information should be made to the Registrar, at the College.

Two New Roads.

If the scheme is carried out, a new Kent by-pass road will cost about £200,000 a mile to construct. The scheme has been provisionally approved by the North-East Kent Joint Town Planning Committee, and the bypass will extend from a point between Cobham and Strood to Rainham, and will include another bridge across the Medway at Temple Marsh.

A scheme to widen the Chester main road from New Ferry to Bromborough—a distance of nearly three miles—at a total cost of £120,000, was submitted to the Bebington and Bromborough Urban District Council, and a proposal to contribute £20,000 towards the improvement was carried by thirteen votes to nine. The road is to be widened to 60 ft., and towards the total cost £60,000 is to be contributed by the Ministry of Transport and the remaining £40,000 by the Cheshire County Council.

Noted View Saved.

To save the Parkstone (Poole) golf links from being built over, the members of the golf club have purchased the land from Lord Wimborne at a cost of £20,000. The club intend to preserve the links, which has fine views over Poole Harbour.

THE LONDON BUILDING ACTS AND THEIR APPLICATION—XXVII

BY H. V. MILNES EMERSON, A.R.I.B.A.

Section 154.—Payments to surveyors for ordinary and special services.

(1) There shall be paid by the builder, or in his default by the owner or occupier as the case may be, of the building or structure in respect whereof the same are chargeable to every district surveyor in respect of the several matters mentioned in Parts I. and III. of the Third Schedule to this Act, the fees therein specified or such other fees not exceeding the amounts therein specified as may be directed by the Council.

Sections 155 and 156 relate to fees payable by the Council to the district surveyor concerned. Section 175.—Periods when surveyors are entitled to fees.

(1) At the expiration of :—

Fourteen days after the roof of any building has been covered in, or, the completion of any work by this Act placed under the supervision of a district surveyor or any special service in respect of any building structure or land performed by a district surveyor, the district surveyor shall be entitled to receive the fees due to him from the builder employed in erecting such building or structure, etc., or from the owner or occupier of the building or structure, etc., concerned, and such fees can be recovered in a summary manner if payment is refused.

NOTE.—The owner or occupier at the time the work was carried out is liable for these fees and not the owner or occupier at the time the notice was given. Tubb *v.* Good (L.R. 5 Q.B. 443). If the builder for whom the district surveyor made his survey becomes insolvent, the district surveyor cannot recover from the lessor as owner. Evelyn *v.* Whichcord (31 L.T. (O.S.) 96).

Section 154 states that the builder or the owner or occupier shall pay the fees due to the district surveyor, but it has been asserted that in the event of neither of these persons fulfilling his obligations, and if the notice form has been signed by the architect, surveyor or other deputy, the district surveyor is entitled to proceed against them for the recovery of his fees. As before mentioned, it is advisable if the architect or surveyor has occasion to give the required notice to the district surveyor, to state at the time that he is not to be held liable for the district surveyor's fees.

The fees payable to the district surveyor for services under the 1894 Act have been revised and are now in force until the end of 1928 as follows :—

The Third Schedule.—Part I.

On new buildings :—

	£	s.	d.
For every building not exceeding 30 sq. ft. in area and not exceeding 10 ft. in height	0	12	6
For every building not exceeding 400 sq. ft. in area and not more than two stories in height ...	1	17	6
For every additional story	0	6	3
For every additional square or fraction of a square	0	3	2
For every building not exceeding 400 sq. ft. in area and of one story in height	0	18	9

NOTE.—It has been held that a surveyor cannot charge a fee upon each set of chambers (or flats) as a separate building; he can only charge in respect to the entire structure. Moir *v.* Williams (1892 : 66 L.T. 215).

Surveyors are entitled to fees upon reservoirs, they being buildings or structures under section 138. Moran *v.* Marsland (1909 : 100 L.T. 374).

The district surveyor is entitled to his fees in proper cases under section 145, *i.e.*, notices to be given to surveyor by builder. Westminster City Council *v.* Watson (1902 : 87 L.T. 326. Akers *v.* Danberry (L.J.K.B. 315).

On Additions, Alterations or Other Works.

	£	s.	d.
For every addition or alteration or other work to which the provisions of this Act apply, made or done to or on any building after the roof thereof has been covered in, one-half of the fee charged in the case of a new building calculated upon the area of the whole building.			
For inspecting the arches or fire-resisting floors over or under public ways	0	12	6
For inspecting the formation of openings in party walls (for each opening)	0	12	6
For inspecting the closing of ditto	0	12	6

Provided that in case of public buildings, buildings constructed of concrete and buildings divided into separate sets of chambers or tenements by party structures the fees hereinbefore specified in this part of this schedule shall in every case be increased by one-half.

NOTE.—It has been held that in the construction of a series of arches for cellars under a public street the district surveyor was entitled to a fee upon each distinct building to which any given number of arches were allotted. Power *v.* Wigmore (27 L.T. 148).

On Chimneys and Flues.

	£	s.	d.
On the construction of a furnace chimney, shaft or similar shaft for ventilation or other purposes, in addition to the fee for any other operation in progress at the same time if not exceeding 75 ft. in height	2	10	0
If exceeding 75 ft. and not exceeding 100 ft.	3	2	6
For every additional 10 ft. or portion of 10 ft.	0	12	6
On the carrying of a flue from an oven, stove, steam boiler, furnace or close-fire into an old flue ...	0	12	6
On certifying that a chimney breast in a party wall may be cut away	0	12	6

NOTE.—In view of the recent cases in which old buildings have cracked or collapsed, it is important that the architect should satisfy himself that due notice has been given and the necessary certificates obtained from the district surveyor under the Acts before the work is commenced.

On Certifying Plans.

	£	s.	d.
For examining and certifying plans of an old building	2	12	6

On Wooden and Temporary Structures.

On inspection of any wooden structure or on inspection of any structure or erection put up on any public occasion the same amount as for a new building calculated on the area of the structure or erection without reference to the area of any building to which it may be attached or in or on which it may be put up.

NOTE.—External stands would come under this part, but temporary movable seating inside a building or a platform over a public bath to convert it into a hall would not apply.

Where there are not more than four adjoining or nearly contiguous structures in the same ownership, the fees on each dangerous structure are as follows :—

(1) For making a survey of the structure reported as dangerous and certifying opinion thereon :—

	£	s.	d.
If the structure does not exceed 4 squares in area and 2 stories in height	0	9	6
If exceeding 4 squares	0	12	6
For every additional story above two	0	3	2
(2) For each inspection of the structure and report as to completion or progress of the works ...	0	6	3
(3) For inspecting the structure before the hearing of the summons and attending the Court to give evidence :—			
If one structure only	0	12	6
If more than one structure (for each structure)	0	6	3
(4) For inspecting the structure before the hearing of the summons against the occupier (the owner having failed to comply), and attending the Court to give evidence :—			
If one structure only	0	12	6
If more than one structure (for each structure)	0	6	3
(5) For every adjournment of the summons	0	6	3
(6) For superintending the erection of shoring (including needling when requisite) and hoarding ...	0	12	6
(7) For shoring without hoarding or hoarding without shoring ...	0	9	6
(8) For supervision, including when the Council execute works under an order of the Court	0	6	3

Fees Payable for Special Services.

	£	s.	d.
For superintending the construction of floors and partition walls to stables under section 70 of this Act, per building	0	6	3
For superintending the construction or overhanging oriel windows, per building ... ... (See section 73, subsection 6.)	0	6	3
For superintending of any oven, copper, steam boiler or stove to be used for trade purposes and not heated by gas ... ... (See section 66, subsection 1.)	0	12	6
For superintending the fixing of pipes for conveying heated air or hot water or steam at high pressure (for each floor of building on which pipes are fixed) ... (See section 66, subsections 2, 3, 4 and 5.)	0	12	6
For services relating to the erection of buildings on low-lying land, per building ... ... (See section 122.)	0	6	3

Building By-laws: Work of Revision.

Mr. Neville Chamberlain, it is reported, is viewing with satisfaction the very great advance that has been made in the past three years in revising local by-laws. Old-fashioned by-laws have restricted building in many cases. The Departmental Committee on the subject pointed out that "there is no more reason why a person building a palace or a factory should be afflicted by unreasonable by-laws than a person who puts up a workman's dwelling." Additional justification for the revision of old by-laws has been the shortage of houses, the scarcity of bricks, and the progress made in discovering new materials and methods of building construction. Pressure has been brought to bear upon all local authorities, says the *Manchester Guardian*, with the result that in the past three years nearly a thousand new series of by-laws, based on one or other of the three model series recommended by the Ministry of Health, have been confirmed. In 1920 there were six series confirmed, in 1921 12, in 1922 30, in 1923 82, in 1924 194, in 1925 385 and last year 330. Substantially it may be said that the work of bringing up to date by-laws which seriously impeded building development has now been accomplished although in the opinion of some architects the new model by-laws of the Ministry of Health are too vague in some respects.

RCHITECTS' & BUILDERS' INQUIRY BUREAU

are glad to give questions and answers, but cannot t responsibility for contributed replies, especially on matters.

y we appeal to our correspondents to submit their es on paper of a size easily filed, and written as ly as possible, or, better still, in typewriting?—Ed.

Extras.

[Reply to "Enquirer," September 2.]

IR,—Why was the bill approximate? o was paid for preparing the incomplete ? Why should builders (who give esti- tes without charge) be also asked to throw bill provided for the purpose into the ste paper basket and prepare their own? Enquirer" has my sympathy, but surely should seek redress from the person who pared the incomplete bill. Probably the lder has suffered also.

Another Enquirer.

The matter appears to devolve upon ether the quantities formed part of the tract or no. Personally we have never rd of approximate quantities forming part a contract, and presume this not to have en the case in this instance. This being the contractor would have to provide all ngs clearly shown on the drawing if this s the basis of the contract, but our corre- ndent must not make use of this approxi- te bill of quantities for schedule prices for iations, except that variations would have bear a fair relation to the cost of the con- ct work. It would appear that the contract de was a little loose, to say the least, and becomes a matter for both parties to take e broad view, and agree that only things sonably to be expected should be treated part of the original contract. The whole ng rests on what the contract stipulates. l that our correspondent can find out by mining the document.—Ed.]

Building Lines.

Sir,—I shall be glad if one of your readers quainted with the question of building lines l give me the benefit of his advice. e question concerns a wedge-shaped site in rural district, with a main road on the one verging side and a secondary road on the er converging side, the secondary road eting the main road at the point of the dge. There are no existing buildings on her of the roadways which might be taken fixing a building line, and the rural dis- ct authority has taken upon itself to fix a ilding line of 60 ft. from the centre of the dways in each case. Is the local authority powered to do this? If so, under which t? Curious.

Cornice, Wall and Ceiling.

IR,—It would be of interest to know the ognised relationship between cornice, wall, ceiling: (*a*) from a decorative standpoint example, in decorating a room, is it cor- to treat the cornice as part of the ceiling, should it follow the wall treatment?); from a design or constructional point of , is the cornice considered part of the or ceiling, for the purpose of treatment?

W. D. J.

Right of Light.

[Reply to "S. S.," September 9.]

R,—If the owner of the factory has dy acquired a right of lights over the ens, he has no right, however, to en- e that right in the manner described, and owners of the gardens are entitled to ruct the excess of light, also the projec- of the windows when open, which are red to. It is not, in the circumstances, asy matter to devise an effectual means oing this, and at the same time allow e owner of the factory receiving that . etc., to which he was originally en- , no more nor less. The only way is to an action in the court for an injunc- to restrain what is complained of.

If, on the other hand, as may be, the owner of the factory has not enjoyed the original amount of light for nineteen years and a day unobstructed, he has not acquired a right to light over the gardens in question; and in this case, although he cannot be prevented from making what apertures he wishes in his wall overlooking the gardens, the owners of the gardens can, and should, erect hoardings on their own land in front of the apertures, blocking out the light thereto, and thereby preventing a right of light over the gardens being acquired.

Law.

English Oak.

[Reply to "Sense," September 2.]

Sir,—I have no wish to prolong this correspondence, but would emphasise my claim that personal examination is the best method. The best builder and the best tradesmen with the best intentions in the world are not infallible, but I am quite sure both would welcome a sensible specification. History—well, who can get at the history of timber to-day?

Honour and Arms.

Road Construction.

[Reply to "Drysite," August 26.]

Sir,—In laying out the roads of an estate, a broad view of the conditions as a whole must be borne in mind. Your correspondent may rest assured that though the conditions immediately affecting his land may appear unsuitable, no surveyor in his senses would make up the roads by several feet without some very good reason, probably related to surface drainage and gradients generally, and that were the roads made the easiest way in this particular spot, probably a very much larger length of road elsewhere would be adversely affected. Pro Bono.

Overhanging Barge Board.

Sir,—Your correspondent "Law's" reply upon the above question implies that one-half of a party wall belongs to each of the adjoining owners. I have always been under the impression that the adjoining owners were party owners of the whole of a party wall, and that either party after service of the necessary notice might raise the party wall to the full thickness, provided it is in a fit condition to stand the additional weight. If this is the case, does it not rest with the owner exercising such right properly to cope the top of the wall so raised? And would not the carrying over of the roof and barge board be one legitimate way of doing so without prejudice to the rights of the other owner? I ask the questions purely for information Foggy.

Elm Weather Boarding.

Sir,—Can you inform me whether it is necessary to use elm weather boarding in single lengths, or whether the butt joint is permissible, and in the latter case, what is the usual way of securing the joint between the ends of boards, whether by putting zinc or lead under, or what? Amateur.

Gas Fumes and Brick Wall.

Sir,—Where some gas-stoves have been fixed the fumes evidently play on to the back of the flue, as large patches of grease can be seen on the outside walls. Is this in any way detrimental to the brickwork?

T. W. B.

Colouring Grey Stone Floor.

Sir,—A customer of ours has, in an old house, a grey stone floor which he desires to colour red. We shall be obliged if you can let us know what he could use to do this work. Readers.

Composition Floor.

[Reply to "Mersea," September 2.]

Sir,—With some of the poorer class of composition floor, the surface is so hard and impermeable that condensation troubles are often attributed to porous concrete. I have in mind a floor that simply swam with moisture during muggy weather, particularly after a cold spell, but the concrete was perfect. The remedy is good ventilation and central heating. Your correspondent may, however, be really troubled with a porous floor, and half measures are not much good in those cases. The composition should then be taken up and the surface concrete waterproofed before laying new good-class composition.

Drastic.

(*Continued from page 422.*)

the north side, and over them a library and lecture-room are provided. Advantage has been taken of the sloping site to obtain the extra height required for the gymnasium and to provide accommodation for the heating chamber, workshop and cloakrooms, these being entered from the students' entrances at the eastern ends of the school. The lavatories, W.C.s, etc., are adjacent, and are masked to form an entrance screen to the quadrangle.

The building is faced externally with red bricks with a brown brick base, and Portland stone dressings are sparingly used to the principal entrances. The roofs are covered with Cornish slates. The building is heated by the low-pressure hot-water system, and in addition the two staff-rooms have open fires. Electric lighting is installed throughout.

The building has been designed in the Architect's Department under the personal supervision of Mr. G. Topham Forrest, F.R.S.E., F.R.I.B.A., F.G.S., Chief Architect to the Council. The contractors are Messrs. Walter Jones & Sons, Ltd., of 64, Victoria-street, S.W.1.

Plans of this school were given in our issue for April 15, 1927.

Christ Church, Willaston, Cheshire.

The extensions and alterations to this church, which was originally built about the middle of the last century to accommodate 160 people, consist of a new north aisle and arcade, providing accommodation for 80 extra seats, new choir and clergy vestries, and heating and organ chambers. This part of the work on the north side of the building forms the first part of a scheme involving similar additional seating space on the south side, with the addition of a tower and side chapel. The total cost of the first portion, recently completed, was about £6,000, including a new organ by Messrs. Nicholson, of Worcester. The building has been carried out in stone, quarried near the site, with grey Westmorland slates. The opening up of the main wall of the original building involved the storing of existing stained-glass windows, which were replaced. This fact governed the form of the tracery in the principal windows. The small organ screen is carried out in Austrian oak.

The general contractors were Messrs. H. A. Clegg & Sons, of Chester; and the following were sub-contractors:—E. O. Griffith, Liverpool, carving; J. A. Hodgson & Co., Liverpool, slating and plaster; Williams & Watson, Ltd., Liverpool, casements and glass; Hollis Bros., wood-block flooring; Killick & Cochran, Liverpool, central heating.

Mr. Bernard A. Miller, A.R.I.B.A., is the architect.

Beacon Lodge, Seaford, Sussex.

This house is situated on high ground and commands a distant view of the sea and Downs. It is built partly of old materials, and the roof is covered with old tiles. The hall has oak timber and plaster panelling. Wood-block floors are laid throughout the ground floor. A folding partition divides the drawing-room from the study, so that one large room can be formed for dancing when required.

Messrs. Underdown & Duke, of Seaford, were the architects, and the builders were Messrs. Bravery & Funnell, of Seaford. Metal casements and leaded lights were supplied by Messrs. George Wragge, Ltd., of London and Manchester.

THE BUILDING TRADE

THE TRADE UNIONS CONGRESS

The 59th Trade Unions Congress opened at Edinburgh on the 5th inst., when Mr. George Hicks delivered the presidential address. The addresses usually delivered at the Congress express what are known as extremist views, that is to say the views of those who consider the whole economic system of this country fundamentally wrong, and who look for Utopia in a nationalised State. That is a comparatively simple issue, and one which at some time, no doubt, will come to be decided by the electorate as a whole, but the nationalised State always presented to the Congress is not a State to be formed and guided by the majority of the nation, but a State solely directed by Trade Unionists, and their methods, especially as demonstrated in the General Strike, have so far failed to captivate the bulk of the nation. Mr. George Hicks, in his address, naturally referred to the Trade Unions and Trade Disputes Act, describing it as a tyrannical Act which would prevent the Trade Unions from proceeding in the full light of day and drive them to subterranean activities, but he carefully omitted any mention of what may be termed the parent of that Act—the General Strike—in which "in the full light of day" the Trade Unions were able to display their activities and their powers of tyranny, upon which the bulk of the nation expressed no doubtful opinion, and after taking steps to preserve their own freedom looked to the Government for protection.

If the General Council of the Trade Unions Congress after the General Strike had frankly admitted that they had made a mistake in calling that strike, and given the least assurance that it would not be repeated, there would have been no Trade Disputes Act, at any rate in its present form, and if now the Trade Union leaders recognise that a general strike is a form of domination which the nation will not tolerate, all the really contentious sections of that Act will remain a dead-letter never to be put in force, but it is a significant fact that the General Strike has never been strongly repudiated by Labour leaders as a whole, and we understand that resolutions are even to be brought before this Congress from some quarters advocating its adoption. Let the Congress show a firm hand in repudiating the General Strike rather than exerting rhetoric against the Act and little will be heard of the strike sections in that Act in the near future.

Mr. Hicks referred to the position in the coal-mining industry, and then dwelt upon unemployment, lack of housing accommodation, and slums—some of the blemishes to be found in every nation—and attributed all defects to the capitalist system. "Lives that were now blasted by suffering, ill-health, dirt and disease, could be made good and useful. This madness prevailed because the capitalist system existed and was maintained in being by a rapacious and numerically small class which had concentrated in its hands the power of political control and economic domination." We do not know where Mr. Hicks finds this small class holding a concentration of political powers in its hands. The suffrage is all but universal, and every class is represented in Parliament; the so-called "capitalists" which were denounced in past times—the land-owners—have almost ceased to exist, and wealth is far more widely spread than before and held by no small class nor by those described by Mr. Hicks as having done no work but as living idly on "interests, profits, and rents." Mr. Hicks said it was futile and impossible to legislate against "class consciousness," but that is a vague term, and there are signs that class-consciousness is really becoming confined to those who either will not work or who will only work under such protective conditions that the products of their labour cannot find purchasers in the open market.

We wonder whether the Russian workers would recognise that the President was speaking of them when he spoke of the "conquests of the Russian workers" which must be defended and maintained, a passage in his address which was followed by a reference which we can only give as reported: "In every country there were a number of governing men, statesmen, soldiers, naval men and diplomatists, who seemed to possess abnormal homicidal tendencies and who played with horrible instruments of death and destruction like children playing with razors," and he referred to the "war mongers." Is Mr. Hicks's ideal State, the Russian State, described by him as "that Government of peasants and workers," free from these "war mongers," or is not the Soviet Government the most militant State in the world at the present time? Have not the Government of that State also shown some homicidal tendencies in a time of so-called peace in their own country?

It is refreshing to get away from all this and to end our notice of this Presidential address with a passage where Mr. Hicks dwelt upon the desirability of consultation between employers and employees, a passage which, we think, deserves to be given in full. "We all know—employers as well as trade unionists—that the vexatious, toilsome and difficult period through which we are passing is a transitional period. Much fuller use can be made under these conditions of the machinery for joint consultation between employers and employed. We have not reached the limits of possible development in this direction. It is more than doubtful whether we have seen the fullest possible development of machinery for joint consultation in particular industries, and practically nothing has yet been done to establish effective machinery of joint conference between the representative organisations entitled to speak for industry as a whole. There are many problems upon which joint discussion would prove of value at the present time. Such a direct interchange of practical views between representatives of the great organised bodies, who have responsibility for the conduct of industry and know its problems at first hand, would be of far greater significance than the suggestion which has been made in certain quarters for a spectacular national conference under Government or other auspices to discuss a vague aspiration towards 'industrial peace.' Discussion on these lines would bring both sides face to face with the hard realities of the present economic situation and might yield useful results in showing how far and upon what terms co-operation is possible in a common endeavour to improve the efficiency of industry and to raise the workers' standard of life. It is important that our movement should frame a clear-cut and coherent policy on practical lines. We should not be deterred by allegations that in entering into such discussions we are surrendering some essential principles of trade unionism. On the contrary, they will lead to a much clearer understanding on the part of our own organised movement of the immediate practical objectives at which we ought to aim and for which we are entitled to use the influence and power with which this Congress is invested."

If the Congress follows this voice of its President and ignores the other, the 59th Trade Unions Congress will mark a new departure and invest its deliberations with a statesmanlike quality too often absent from its proceedings.

After the reference in the speech of the President of the Trade Unions Congress to the importance of joint consultation between employers and employed, the main interes in the proceedings of Congress centres in th debate on Industrial Peace, which purporte to take the form of a reply to the Prim Minister's appeal for co-operation to forwar the peaceful development of British industry

Mr. Bevin moved the following resolution "This Congress having noted the repeate appeals of the Prime Minister to the leader of labour on the subject of collaboration fo industrial peace, points out that no section o the community is more desirous of industria peace than the workers. It is compelled however, to inform Mr. Baldwin that th greatest hindrance to a response to thes appeals is the legislative and industrial polic pursued by him and his Government an especially their attacks on the wage standard and liberties of the workers and the de liberate class bias displayed in the Trad Disputes and Trade Unions Act. The imme diate repeal of such repressive legislatio would be the best evidence of the sincerit and honesty of Mr. Baldwin and his Gover ment. Failing this, Congress declares tha the country should be given an immediat opportunity of pronouncing a verdict upo the present Government's policy." Thi resolution was carried unanimously.

Mr. Thomas said that when the Prim Minister drew attention to the responsibilit of the Trade Unions Congress he recognise that the Trade Unions Congress was entitle above all people to speak for the industria workers. If that statement be accepted fo the purposes of argument, it may be aske how has the Trade Unions Congress voice the desire of the workers for industrial peac which this resolution asserts exists?

The President in his address referred t the extremely difficult position in the coa mining industry and advocated nationalisa tion. What was the attitude of the Gover ment towards this difficult position? A sul sidy had been granted for many months t give time to have the position examined b a special Commission, and that Commissio issued a report which did not recommen nationalisation, but which contained recor mendations which the Government was pr pared to accept if the other parties to t matters in dispute would agree. The Mine Federation, as is well known, adopted slogan which made acceptation of the Repo impossible. What then was the contributi to peace made by the Trade Unions Congres They called the General Strike. We have wish to revive old controversies, but the facts have a direct bearing on the abo resolution. Mr. Thomas stated that 4,500,0 Trade Unionists were affected by the Tra Unions and Trade Disputes Act, and bef that legislation was introduced they sho have been consulted, and he concluded speech on the above motion by saying t the only honourable course for the Pri Minister to take was to challenge the e torate.

Mr. Thomas is a man who has proved h self entitled to the respect of all people whose honour cannot be impugned when sees facts clearly, but on this occasion does not appear to see that in May, 19 the Trade Unions Congress, which he alle speaks for 4½ million Trade Unionists ou a population of some 47 million, did challe the electorate, not at the polls, but, so speak, in the streets, and the nation answe that challenge in no uncertain way; t themselves took up the burden laid down the Trade Unionists and carried on the v of the nation until better counsels prev with the General Council of the Cong and the General Strike was called off. nation asserted with no uncertain voice 4½ million Trade Unionists did not repre the nation, and that such an attemp over-ride the Government could not tolerated in the future. The Government

hasten to introduce legislation, but ed a long period to elapse before the e Unions and Trade Disputes Bill was duced, and, as we have said in our note e presidential address, if in that inter- ome absolute assurance had been given ehalf of the Congress that the General e was a weapon that would not again sorted to to coerce the nation, it is more doubtful if any legislative steps would been taken.

e attitude now taken by the Congress ly that taken by the Labour Party in ament, when a private member at- ted to move the introduction of a clause e Trade Unions Bill relating to conciliа- and the Government, though saying a clause could not find a place in that promised a full inquiry. The Labour y declined to discuss conciliation unless Bill was dropped. The clauses in that which were mainly objected to were only clauses which safeguarded the nation being coerced into action by a very l minority, and that of one class, yet is characterised by Mr. Bevin as "class lation." Let these facts be faced and hink it must be admitted by fair-minded ons that what the Congress is doing, king as Mr. Thomas asserts, for the kers, is not to demonstrate their desire peace in general, but their desire for e at their own price with liberty to ce the nation into any course which they k fit.

ne way to peace lies open before all par- and the Act, so far as those sections are erned, can be rendered a dead letter if Trade Unions recognise their true func- s and do not attempt to coerce the nation. ustrial peace is essential if this nation is old its position, and every single member he community will suffer if ill-feeling in ustry continues. It would be an impos- e task to persuade the community that as relude to peaceful negotiation a Statute ch prohibits coercion and intimidation t first be withdrawn, for neither of those elements likely to beget good feeling in walk in life. It is perfectly true, as rted by Mr. Bevin and Mr. Thomas, that re are a great number of trade disputes ch are settled every year by peaceful hods which attract little public attention, the reason for this may well be that y are settled at an early stage before the nents of coercion and intimidation are ught into play by those involved in the pute. The origin of many disputes has, reover, been disagreement between two ies on the same side, the third party ing no direct interest in the question in e but being dragged into the dispute. To ve at a settlement it is essential that all ies should negotiate on equal terms, and is the desideratum to be aimed at—an ality of contracting power between dis- nts. The community are always anxious ee fair play on all sides, but to coerce the munity is to render it a party to the ute.

ter on in the proceedings a resolution passed unanimously relating to the Trade ns and Trade Disputes Act in the follow- erms:—"This Congress hereby affirms its rmination to maintain in their entirety ights and liberties which the past efforts he organised workers have secured, in- ng the full right of combination by all ers and the application of the strike to sed as and when and in what manner be found necessary either to secure im- ements in their working conditions, to lish a rightful status of labour in the mic life of the country, or to resist any npts to depress the workers' economic tions. This Congress pledges itself to steadfastly for the repeal of this itous measure and calls upon the work- class of Great Britain to exercise its t political power to remove from office present Government, which, dominated rganised capital and hereditary class ege and prejudice, has so unscrupu- lously used its position to injure the industrial and political organisation of the workers."

As regards the first part of this resolution, it does not necessarily indicate a course which will contravene the Act, unless in taking the action it indicates the organised workers take steps which will either directly coerce the Government of the day or indirectly do so by inflicting hardship on the community. As regards the last few lines, it deals with a state of affairs which exists only in the imagination of the Congress, but Mr. Clynes appears to have used a very dangerous argument when, as reported, he condemned the Act especially because "it was not merely an Act against a class or state of things, but was directed against the Opposition in the House of Commons." Here he expresses in a few words the disadvantages, pointed out long ago, of granting political powers to industrial organisations. If the representatives of industrial organisations have a seat in Parliament as members of a Party, they cannot complain that legislation on industrial matters is aimed at their political Party. Such an argument would apply to almost every piece of legislation passed by Parliament at the instance of any Party.

A resolution to set up a standing advisory Committee to advise affiliated associations on the effect of the Act seems, however, a practical step, especially in the obvious state of misunderstanding, and such a resolution was passed.

Mr. Clynes's allusion to the representatives of more than 100,000 workers who, on account of the Act, would never attend the Congress again, was apparently a reference to the representatives of the Civil Service Unions.

The Congress, by an overwhelming majority on a card vote, decided to break off negotiations with the All-Russian Council of Trade Unions, a decision which, in view of the communications received from that body, will commend itself to all persons who consider that responsible bodies in this country cannot suffer interference in the management of their domestic affairs from foreign sources, and Mr. Clynes put the matter admirably when he said: "Unity in appearance was unity without value, and a unity which was a forced and artificial relationship was positively harmful and had no value for the well-being of the workers of the world. International action, to be of advantage to the workers, could continue only upon a basis of mutual recognition of each others' position." Yet, in a resolution which followed the above, the Congress condemned the Government for terminating the Trade Agreement with Russia upon grounds to which the above statement, with very slight alteration, would apply.

There were not many resolutions relating to purely industrial matters. A resolution was carried expressing concern at the failure of the Government to deal with the problem of unemployment and protesting against the exclusion of home and out workers from the Unemployment Acts. Discussion took place upon the Report of the Blanesborough Committee on Unemployment Insurance, and a motion was carried protesting against the action of the Labour representatives "in signing such a despicable report." That Report was unanimous, and our readers have had an opportunity of considering and recognising its merits. Miss Margaret Bondfield made a spirited defence of her position, and pointed out that the representatives must be free to exercise their own discretion. If we remember rightly, when, in the Osborne case, before political powers were granted to the Trade Unions by statute, it was claimed that a levy could be made to support members in Parliament, one of the objections raised in the Supreme Court of Appeal—the House of Lords—was that Members of Parliament could not represent one section of the electorate, but their duty was to represent the whole electorate. It has long been recognised that Members of Parliament are not mere delegates bound to vote according to direction, but they must be free to use their own discretion. The Labour Party will injure its own position in the country if it takes the view that when it selects representatives to represent it on any Committee, those delegates are mere puppets bound by absolute instructions to vote mechanically.

Resolutions were passed as regards factory legislation; the failure of the Government to codify and amend factory legislation was deplored, and a resolution was passed advocating a 48-hour week in factories. The question of a further Act dealing with Workmen's Compensation was raised in another resolution, which should incorporate such reforms as to industrial diseases and other matters as might be deemed necessary after consultation with the affiliated organisations, and which should make it compulsory upon employers to insure their workpeople against accidents and industrial disease. It was announced also that the General Council had decided, on the representation of the National Association of Approved Societies, to set up a department to deal with health research.

This can only be an incomplete notice of some of the proceedings at this Congress. It was to be anticipated, we suppose, that the Congress would have to raise a protest against the new Act, and allowance must be made for some exaggeration in undertaking a difficult task, but we trust the debate on this subject will not have obscured the statesmanlike observations made by the President upon the steps that can be taken to secure peace and prosperity in industry by practical consultations between those who represent employers and employed, and the proceedings on the last day on which Congress met afforded evidence that this had not been the case, for a resolution to the effect that Congress condemns all industrial peace arrangements having as their basis the indefinite continuance of capitalism and wage slavery and declaring that it is the business of the trade union movement to organise the workers for the struggle against capitalism, was not accepted, the previous question being moved and carried by a large majority, and several speeches were delivered showing a strong desire to forward peaceful methods, but we can only quote one sentence of Mr. J. Beard: "Any fool can start a strike, but it takes a little bit of common sense and sometimes of courage to settle one." We may add to this: anyone can talk of abolishing the capitalistic state, but no one can point to a satisfactory working model on any other basis.

British Standard Engineering Drawing Office Practice.

Recommendations for British Standard Drawing Office Practice, dealing with a standard procedure for submitting drawings, tracings, and blue prints, to be adopted by manufacturers and contractors, have just been published by the British Engineering Standards Association. This publication is of interest to all those engaged in industries where drawings are used. Considerable care has been expended by the committee in its preparation, so that no hardship should fall on any firms should the recommendations contained in the report not be in strict accordance with their usual practice. To cover this contingency a "Note" has been included which suggests that purchasers should not enforce the manufacturer or contractor to make new drawings to comply with the B.E.S.A. recommendations if the latter already has old drawings and tracings in stock which would serve the purpose.

The scope of the report covers the over-all sizes of tracing cloth and paper, position of drawing number, date and name, indication of scale, method of projection, types of lines and writing, dimension figures, relative importance of dimensions, indication of material on drawings, screw-threads, flats and squares, and tapers, together with explanatory diagrams. Copies of the report may be obtained from the British Engineering Standards Association, 28, Victoria-street, London, S.W.1, price 2s. 2d.

Bolland; lock-up garages, Green-la., estate, -igh, for Turner & Stidworthy; extension of House, Rowington, for Col. W. Ward: 2 houses, ady-av.; Green-la., estate, for Johnson & n: 8 houses, Glendower-av., Whoberley estate, eigh, for A. Barratt.

THE SCOTTISH BUILDER

NEW BUILDINGS IN SCOTLAND

Aberdeen.—Extension.—An extension of the buildings at King's College, Old Aberdeen, to provide a new examination hall, etc., at an estimated cost of £30,000, has been approved by the Plans and Sewerage Committee of the Town Council. Plans for the erection of an additional three houses, at a cost of £3,750, have also been approved.

Blantyre.—Hall.—Building operations have been commenced on a miners' welfare scheme at Blantyre. The ground extends to about four acres, running between Victoria-street and Craig-street. The building is to be of one story, with frontages to Craig-street and Calder-street. The plans show a large hall for 300 persons.

Edinburgh.—Houses.—Tenders are now being invited for the erection of 266 houses on the Prestonfield housing site. The houses are for the Town Council. Mr E. J. MacRae, A.R.I.B.A., is the architect.

Glasgow.—Police Station.—Application is being made by the Town Council for the erection of a new police station at Millerston.

Glenafton.—Improvements.—The Board of Health has approved the plans of a proposed X-ray and electric lighting department at the Glenafton sanatorium, for which a loan of £3,000 will be authorised. The work is for the Ayrshire Glenafton Sanatorium Committee.

Inveraray.—Housing.—The Town Council has decided that a suitable site is necessary for erecting dwellings of a modern type.

Kirkcaldy.—Houses.—Forty-eight houses are to be erected for the District Committee. Mr. G. B. Deas, of Central-chambers, Kirkcaldy, is the architect.

Kirkcudbright.—Housing.—The Scottish Board of Health has approved the estimates of the Town Council for a block of 16 houses to be erected in Kilndale-terrace. The total estimated cost of the scheme is about £6,800.

Montrose.—Bridge.—Work has commenced upon the new ferro-concrete bridge across the River Southesk in place of the present suspension bridge, and boring operations are expected to commence next week.

Architect's Appointment.

Mr. Walter L. Allison, architect for the Seafield estates in Strathspey, has been appointed estate agent for the Earl of Drogheda in County Kildare, in succession to Major Dewar.

Roadside Tree Planting.

Roadside tree planting is the subject of a report just issued by a sub-committtee of the Joint Regional Planning Committees for North-West and South-West Kent. The sub-committee, of which Sir William Geary is chairman, deal with the planting of trees on arterial and through county roads which have, or it is hoped will have, adequate margins. The sub-committee consider that the London to Tunbridge Wells main road, with the exception of the arterial sections between Bromley and Sevenoaks, and the Tonbridge to Hastings main road, also the Tonbridge to Maidstone road, is generally too narrow between the boundary fences to permit of trees being planted. Further, they say that many sections of these roads are of such alignment that trees would obscure the view of traffic and be a source of danger. The new arterial roads, which are 60 ft. to 100 ft. wide, and the London and Folkestone road so far as it has been widened, where the margins vary from 15 ft. to 30 ft. each side, are suitable for tree planting. In Kent there is room for only one row of trees on each side of the carriageway. Should two rows be planted, the sub-committee consider that inconvenience might be caused to neighbouring houses, and in time, unless periodically lopped, the trees would be an obstruction to traffic.

BUILDING TRADE WAGES IN SCOTLAND.*

The following are the present rates of wages in the building trade in the principal towns of Scotland. Every endeavour is made to ensure accuracy, but we cannot be responsible for errors that may occur:—

	Masons.	Bricklayers.	Carpenters, Joiners.	Plasterers.	Slaters.	Plumbers.	Painters.	Labourers—Masons', Bricklayers', Plasterers'.

TRADE NEWS

Brick Chimneys.

'e learn that Messrs. P. C. Richardson & (Middlesbrough), Ltd., have just received order to provide all materials and erect—uding excavations and reinforced concrete ndations—a huge brick chimney 363 ft. h by 19 ft. 6 in. internal diameter at the for Messrs. the Branston Artificial Silk Ltd., at Burton-on-Trent. Apart from contract, they are already building a k chimney at Wolverhampton 365 ft. high 18 ft. 8 in. internal diameter at top.

Essay Competition on Copper Roofing.

he judges in the above competition, or-ised by the A.A.S.T.A., have awarded eight prizes (presented by Messrs. art & Son, Ltd., of 346-350, Euston-road, W. 1) to the following :—A. F. Beer eter), S. R. Day (Hanwell), A. J. Clayton imbledon), P. S. Hudson (London), W. sham (Aberdeen), S. E. T. Carter (East wich) and E. W. Talbot (Weymouth). the recommendation of the judges an itional prize was also awarded to Mr. vney, of East Dulwich.

Travelling Exhibit of Radiators.

he travelling exhibit of the National liator Co., Ltd., consisting of an installa- of the "Ideal" Cookanheat and "Ideal" sic Radiators, will demonstrate as fol-:—September 16, Hibbs' Garage Parking nd, Princes-drive, Colwyn Bay; Septem-17 and 19, Red Parking Ground (corner onway-road), Llandudno; September 20 rnoon) and 21, City Parking Ground, gor; September 23, The Bailey Head, estry; September 24 and 26, Horse Sale , Smithfield-road, Shrewsbury.

Foundation Concrete.

he Penobscot Tower Building, Detroit, SA., is 47 stories high, and the caissons d to a depth exceeding 100 ft. below nd level. There were certain difficulties nstruction, we learn, owing to the fact test borings indicated the presence of ur-bearing waters. We understand that rchitects specified "Super Cement" for undation concrete, which will require 20,000 barrels, approximately 3,400 tons. s "Super Cement" is manufactured by a s identical with the "Submarine" made in England and of English origin.

Grandison Tombs, Ottery St. Mary.

E. Terrell, managing director of the Stone Company, Ltd., Seaton, Devon, oprietors of the Beer Stone Quarries, e as follows :—"I have read with much t the report of the Exeter Congress of ritish Archæological Association, and I n your issue of September 2, page 345, is made of the beautiful Grandison at Ottery St. Mary. It may be of e to your readers to know these were e in Beer Stone A.D. 1360. We have an illustrated pamphlet with an ex-photo of same, and shall be pleased to copy to any of your readers."

The Building Exhibition, Belfast.

irst Housing and Building Exhibition Belfast was concluded at the Ulster Wednesday last. The exhibition was on Friday, September 2, by the Right Wm. G. Turner, P.C., D.L., Lord rof Belfast, who, in declaring the ex-open, said that the good that such ns did in displaying new methods uction was limitless, and he heartily ulated the organiser, Mr. T. Percy upon his achievement.

uilding exhibition is, we understand, link in the chain of industrial exhi-of strong commercial value which Belfast is to organise in Belfast, licy has been maintained of keeping its exclusively to housing construc-building arts and crafts, thus im-posing a standard which is of great value both to exhibitors and visitors from the architectural and engineering professions and the building crafts.

Postal Courses of Instruction.

On September 17 will be opened at Sheffield the new and enlarged premises of the Bennett College of Sheffield. This institution devotes its activities to supplying through the post, in easily assimilated form, a complete technical or commercial education for ambitious men and women. All the commercial professions and technical trades are taught by post, and the College specialises in preparation for examinations. Those who are in doubt as to a career or the best means to advancement in a chosen profession may write to Mr. J. H. Bennett, F.R.S.A., M.I.M.E., at the Bennett College, Sheffield.

Concrete Lumber.

Recently we spent an interesting morning going over the Park Royal works of Messrs. Novocrete and Cement Products Company, Ltd. This firm has recently made a unique development in building material — "Novocrete Lumber"—which has several advantages over certain methods of building construction. "Novocrete" is a substance containing roughly three parts by weight of treated soft-wood sawdust and one part of a special cement preparation. It is fire-proof, rot-proof, vermin proof, and can easily be sawn, nailed, or screwed. These are advantages which make for quickness of construction in addition to efficiency of result. The method of house building with "Novocrete" is very much simpler and quicker than with some other methods. Upright posts—from 10 ft. to 12 ft. long—are concreted into the foundations, and the "Novocrete" lumber, which is supplied in panels 1¼ in., 1½ in., or 2 in. thick, is nailed or screwed on to the side of the posts, giving an exterior and interior wall with a space equal to the side of the post in between the walls. This air-space acts as an additional insulating medium. The panels may be washed over on the exterior with a distemper, or painted, while the interior may be papered direct on the surface without plastering. Floor and roofing tiles are other products of this firm, which has perfected a system of roof-covering which does away with battens and enables a much longer span than is usual. These tiles weigh little more than half the weight of the ordinary product, and—owing to their resiliency—are not liable to breakage. Many tests on the fireproof qualities of "Novocrete" have been made, and we quote one from experiments made by the Department of Scientific and Industrial Research :—

"3 *in.* '*Novocrete*' *Slab.*—The 'Novocrete' slab supported the 2 cwt. load for four hours while exposed to the flame. At the end of this period the slab was removed and allowed to cool. It was then tested by a gradually increasing central load to destruction without the application of flame. The failing load was 502 lbs."

Full information of these products and all photographs and blue prints referred to in the above report are extant, and copies will be sent if desired upon application to the company at Stonebridge Works, Park Royal, N.W.10.

Moler Insulating Material.

On Thursday of last week we had the pleasure of being present at the formal opening of the new works and plant at Hythe, Colchester, of the Moler Products, Ltd., of 8, Old Jewry, London, E.C. 2. These new works have been built in order to produce, under the best conditions, the partition blocks, insulating bricks and insulating composition made from "Fosalsil" earth or moler, as it is sometimes called. This substance—which is obtained in Denmark—consists of minute shells, invisible to the naked eye, known as diatoms. Each shell contains innumerable little cells each separately sealed which give to the moler peculiar insulating properties. The substance—which is known to the Germans as Kieselguhr—is analogous to silt, and is a good example, so we understand, of a natural insulating material combining mechanical strength and good fire-resisting properties with lightness and low cost. The plant and methods of manufacture of the "Fosalsil" are good, and are designed to give the maximum speed with the greatest efficiency of product. The moler earth is unloaded at the riverside and a conveyor belt carries the earth from the storage supply (5,000 tons) to the separating plant, which frees it from stones. Then to the disintegrating plant, from which another belt elevator conveys the earth to the hoppers, whence it passes to the mixing plant. Here, by the addition of water, the moler earth is converted into a plastic mass which reaches the brick- and slab-making plant. The shaped products are then treated in the drying kilns and finally fired in the gas-heated burning kilns, from which eventually they are loaded direct on to the trucks lying in the railway sidings and bays. The engine-room, boiler-house, and gas-producing and electricity machinery are also worthy of attention. The factory, indeed, has been planned upon model lines, and with room for considerable extension. An interesting effect is that produced upon the colour of "Fosalsil" by the action of heat. In its original state the earth is of a neutral, yellowish colour, but firing produces a soft vermilion colour, very pleasing to the eye. From tests carried out by Messrs. David Kirkaldy & Son, we learn that the crushing load for hollow partition blocks is half a ton per square inch, while the weight as compared with the ordinary clay or terra-cotta partition block of similar size is one third lighter. If the products can be put on the market at a price comparable to the ordinary brick or partition block, there is, we feel, a future for "Fosalsil" productions. The visit over the works was concluded by a luncheon at the "Cups" Inn, Colchester, at which Mrs. Alderton—deputising for Sir Laming Worthington-Evans, Bt., Secretary of State for War — proposed the toast of "Moler Products, Ltd.," to which the chairman, Mr. J. A. Agnew, replied.

Worthing Extension.

Worthing Town Council has approved the application for a Provisional Order to extend the boundaries of the borough by the absorption of the adjacent parishes of Derrington and Goring-by-Sea. The extension will add nearly 6,000 acres to the existing area of the borough, and transfer property of over £26,000 rateable value.

Health Week, 1927.

The movement known as Health Week was instituted in 1912, and this year's celebration takes place from October 2 to October 8, when local authorities throughout the country will endeavour to focus public attention on matters of health. The immediate purpose of Health Week is to make health during the week the chief topic of public concern; to secure the recognition of the fact that disease is a thing which can, and should be prevented; to impart sound information as to public and personal hygiene, and to build up a public opinion which will not tolerate a high disease rate or excessive infant mortality, and which feels as a personal reproach the sight of an ill-nourished or neglected child. Its ultimate object is to set up a high ideal of health and to bring to all that zest in life which only perfect health can impart. Mr. E. White Wallis, O.B.E., F.S.S., 90, Buckingham Palace-road, London, S.W., is the secretary, from whom full information may be obtained.

Joinery Works' Owner's Estate.

Mr. William George Wakeham, of Plymouth, head of Messrs. W. G. Wakeham & Son, the Eagle Steam Joinery Works, Coxside, left estate of the gross value of £44,844, with £6,388 net personalty.

NEW BUILDINGS IN LONDON

Beckenham Hill. — SCHOOL. — Mr. F. A. Walters has received the Lewisham Borough Council's approval to the erection of an elementary school and caretaker's house at Beckenham Hill.

Brompton.—ENLARGEMENT.—The Brompton Oratory Roman Catholic Central School at Brompton is to be enlarged.

Croydon.—SCHOOL.—Tenders are being invited by the Croydon County Borough for the erection of a central school at Winterbourne-road, Thornton Heath, with accommodation for 300 scholars. Mr. W. H. Ashford, A.R.I.B.A., of 32, Paradise-street, Birmingham, has prepared the plans.

Denmark-hill.—HOME.—Messrs. F. Griggs and Son have just secured the contract at £263,034 for the erection of the William Booth Memorial buildings, Denmark-hill, S.E. The work is for the Salvation Army, and Mr. J. Morriss Viner, L.R.I.B.A., of 23, Knightrider-street, E.C.4, is the architect.

Deptford.—ADDITIONS.—Messrs. Barclay, Perkins & Co., Ltd., of Park-street, S.E.1, have received the Deptford Borough Council's approval to an addition to "The New Cross House" P.H., 316, New Cross-road, next to Laurie-grove.

Downham.—SCHOOLS.—The London County Council has selected two more sites for the erection of further elementary schools at Downham.

Lewisham.—HOUSES.—In Newquay-road, Lewisham, Messrs. T. A. Boughton, builders, of Lee Green, are to build 26 houses.

Lewisham. — HOUSES. — The Lewisham Borough Council has approved the plans submitted by the London County Council for the erection of 325 more houses on the Downham estate, Lewisham.

Lewisham. — SCHOOL. — The Ministry of Health has approved the sale of land on the Grove Park housing estate to the L.C.C. for the erection of an elementary school. The site is 1½ acre.

Little Argyll-street.—St. Mary's Wharf Co., are carrying out the demolition work to a site on the corner of Little Argyll-street and Great Marlborough-street, W.1. The new premises are to be erected by Messrs. Perry & Co. (Bow), Ltd., and Mr. Gordon Jeeves, 16, Hanover-square, W.1, is the architect.

Middlesex-street.—SHOPS.—A block of shops and flats containing 24 tenements is to be built in New-street, Middlesex-street. These proposed shops are for the City of London Corporation, and the plans have been prepared by the City Engineer.

Moorgate-court.—Messrs. Dove Bros., of Islington, have secured the contract for extensions to the premises of the Ocean Accident and Guarantee Corporation, Ltd., in Moorgate-court, Moorgate-street, E.C. Sir Aston Webb & Son, of 19, Queen Anne's-gate, S.W.1, are the architects.

Oxford street.—ALTERATIONS.—Large structural alterations are to be carried out at Messrs. Lockwood and Bradley's premises at 3, Oxford-street, W.1. Messrs. W. and E. Hunt are the architects, and Messrs. Hall, Beddall and Co., of Pitfield Wharf, Waterloo, S.E.1, are the builders.

Oxford-street.—ALTERATIONS.—Messrs. Collcutt and Hamp, 126, Wigmore-street, W.1, are the architects for the alterations which are being made at "Frascati" Restaurant, Oxford-street, W.1. Messrs. G. Godson and Sons, Ltd., of Kilburn, are the builders.

Teddington.—BUILDING.—Messrs. W. H. Gaze & Sons, Ltd., of Kingston-on-Thames, have secured the contract for extensive building for the Archives Department of the Anglo-South American Bank, Ltd., at Broom Hall, Broom-road, Teddington, under Mr. W. T. Walker, F.R.I.B.A., architect.

PATENTS

APPLICATIONS PUBLISHED.*

269,035.—L. J. Opperman, J. E. Piper, G. H. Mason, and B. Walton: Construction of door bolt.

269,041.—S. S. Clarke: Casement windows.

269,050.—A. A. Dean: Door fastenings.

269,055.—C. Riesterer: Roofing Slates.

269,069.—H. R. Morgan: Means and method of strengthening boxes or packing-cases.

269,073.—G. H. Ovenden: Stack pipes.

264,190.—H. Verboom: Chimney-top.

269,112.—J. E. Serste: Window-operating apparatus.

269,262.—W. Lambert, A. A. Mead, and J. Stone & Co., Ltd.: Lining of metal pipes.

269,307.—F. Greener: Boxes or cases, and methods of producing same.

269,336.—W. N. Williams: Apparatus for use in joining edgewise together pieces of wood veneer, etc.

252,730.—J. Halfen: Channel-shaped supporting-bars for concrete ceilings.

269,358.—C. M. Gibbs, W. C. Howes, and G. Crofts: Window sash and door fastener.

269,365.—W. A. Porter and W. V. Scanlan: Manufacture of concrete angles, etc., for use with concrete pipes.

269,373.—F. B. Dehn: Fluid-pressure device for mixing and applying cement.

255,477.—Flinkote Co.: Roofing material.

269,396.—T. B. Munroe: Parquet flooring material.

269,400.—A. G. Lindstrom: Method of making wooden plates or panels for tables, etc.

269,425.—L. Devlaemynck: Combined portable tables and seats.

269,436.—Irving Iron Works Co.: Structures of reinforced concrete.

262,117.—Naamlooze Vennootschap Handelmaatschappij, R. S. Stokvis & Zonen: Water-flushing apparatus.

269,462.—F. D. Cowieson: Wall ties.

269,464.—Dr. K. Ritter and E. Hartel: Flooring-tiles.

269,344.—H. Webster (deceased): Kilns for burning clay products.

269,609.—T. W. Greenwood: Ventilating-skylights.

245,094.—W. Stockly: Apparatus for handling material.

269,615.—E. Edwards: Locking-means for pottery moulds.

269,630.—H. D. Hill and A. Hill: Device for inducing updraught and preventing downdraught in chimneys and for extracting foul air and dust from buildings.

269,632.—G. A. Rossborough: Articles of furniture.

269,673.—A. G. Downing and H. N. Downing: Water-trapped gullies.

269,674.—T. W. Wagg: Window sash fastener.

269,697.—B. C. Scholz: Tesserae for mosaic and tessellated work.

269,701.—J. S. Ransome: Abrasive machines for thicknessing and surfacing wood.

269,716.—F. Sage & Co., Ltd., and J. Graham: Shop counters, counter cases, etc.

269,741.—B. J. Moore and A. J. Campbell: Supporting china or earthenware and other articles during the process of firing.

269,769.—A. Haegele, H. Zweigle, and Dr. R. Schleiblinger: Apparatus for heating buildings.

259,936.—Mathmah Ges.: Manufacture of building slabs.

262,394.—E. I. Lindman: Process for producing porous concrete.

265,235.—A. Knapen: System of ventilation.

269,791.—J. Boyd: Down or other pipes attached to the exterior of buildings.

269,794.—Dr. F. B. Dehn: Casters.

* All these applications are now in the stage in which opposition to the grant of Patents upon them may be made.

THE BUILDER

JOURNAL FOR THE ARCHITECT AND CONSTRUCTOR

WITH WHICH IS INCORPORATED "THE BRITISH ARCHITECT."

CXXXIII. No. 4416. SEPTEMBER 23, 1927.

THE PARTHENON

THE Parthenon stands to the architect in very much the same relation as the Bible to the Christian, and with the reticence of the Britisher, we talk little of either, though each as a subject contains a well of instruction. Professor Lethaby, in a series of es in this journal, has reopened a subject towards which we all feel a reverence; and the correspondence which has ved shows at least that there is still a live interest in the building of all time, as there is an affection for the writer as chosen it for his subject.

xt books, lectures and libraries have made us all familiar the name of the Parthenon, and with its salient charac- ics; and though familiarity cannot be said in this instance ve bred contempt, it may have induced a certain indifference eater measure than might have been the case had we to eeper in our studies. Because we have read all there is d about it, we have become a little apt to pay our measure service and pass on our way without much effort to apply we have read to what we intend to do. For this reason the fresh collection of facts and conjectures upon the enon, which Professor Lethaby has gathered together presented to us, is a happy addition to architectural ure, arriving at a happy time.

at is there about this simple building which we have not lated in our modern work? We know that there is no cal problem in it which we are not capable of solving. dea of covering an area with a roof supported on a system ms and posts and walls, is almost primitive in conception ithout doubt the simplest way of approaching the subject. can such an elementary system of building construction us, in this scientific age, anything at all about architecture h us, who can fly mighty rivers in a span, and scrape the with a multitude of stories? It is surely a poor boast ong all these wonders, we cannot point to perfection, and ay well return with humility to the Parthenon, between and perfection we are not able to distinguish.

ure has ever held up her lesson before us, and because eeks saw it while we have remained blind, they triumphed where we have failed. No doubt we could have got about well on sticks for legs, and hinged nippers for fingers, hat hideous Robots we should have appeared had nature ressed and so little understood the meaning of efficiency. pecting her own dynamic laws, she produced that marvel le gradation and surpassing efficiency, the human body. ot just a similar respect for the static laws of structure accounts for the relative greatness of the best Greek work ed with our own?

re very proud of our scientific knowledge, and thankfully the skill of the structural engineer who can analyse the and strains which are ever at work in the buildings fess to design. If we have the patience to attend, he w us how these forces vary from point to point, and can e these changes of function by graphic diagrams showing nore subtle and varied than we can hope to devise out of ds. We may be bored or interested, but in nine cases en we go away, accept the machine-rolled member as an romising fact, and put it into a straight jacket of stone rete, calling the result "design." Surely, some not kinship may exist between the subtleties of graphic nd those of the Greek refinements. The coincidence is too marked to pass over with a shrug.

e told that a straight-sided column would look hollow entre, and that one untapered would look bigger at the top than at the bottom. It is implied that the Greeks corrected where the eye deceived, whereas it is surely more reasonable to assume that the Greeks followed where the eye detected the truth. The straight-sided column is hollow in the centre in the sense that if it is adequate and no more than adequate at the ends, there is a deficiency of material at the centre where the weak stick will always break. The untapered column is actually too big at the top in the sense that if it is adequate at the base there is a surplus of material at the top which does not have to carry the weight of the column. To call these manifestations optical illusions is a gross and misleading misuse of terms. Rather are they optical revelations, since they point directly at the nature of structure. True, we accept entasis and taper as a matter of good manners, but as borrowed practice in rule of thumb and in no sense as a sincere following of the truth.

Now we are surely approaching a point at which we can see, dimly enough, how we may apply the lessons of the Parthenon. We have got to get right out of our heads the heresy that efficiency is a commercial monopoly, a thing mainly of smartness, speed and slick achievement—the making of a "show." It is not sufficient for architecture to cling tightly over a commercially conceived structure. This is intended not as a gibe at commerce, but rather as a jog to the artist. We must roll our stanchions to a pattern if we are to make them quickly enough, but because it is a mechanically prepared and regular product, does not make its function in actual stress an even and equal thing. Nothing can alter the ways of nature, and nothing can turn building into architecture which does not respect the same laws and express them visibly.

There are many who will say that such a minute study of, and care for, the form of a building is outside the scope of practical politics at the present day; in that we cannot possibly afford either the time or the expense. To these we would say that until we have stripped our "showy" modern designs of all extravagances of ornament, costly material and unnecessarily lavish equipment, we have no right to cry poverty as an excuse for lack of taste. Let these extras follow humbly after the perfect form of building, and not impose themselves vulgarly upon ugliness, and they will find their proper place in due course. But the main thing is the perfect building into which to merge them.

We have to resist the lure of the machine, as the Greek craftsman resisted the temptation to stretch a line from end to end of the column and work to that easy indicator. Every good thing has to be paid for by constant effort and honest endeavour, and good architecture is no exception to this stern rule. If it is impossible for us in this busy age to pay the price of care and study, then we must rest content to rank low in the periods of architecture.

But this counsel of despair will not do. What is desired is a greater regard for the nature of structure, and a little more humble appeal to the scientists to teach us exactly what is happening within the equilibrium of a building, which we think of as repose, and are apt to look upon as inertia. A stress diagram carved in stone can never become fine architecture, but it can be a source of inspiration as to the ways of nature, which may open our eyes as to the means of expressing it.

Let us take up afresh the study of the Parthenon, but with eyes open to what we are to seek, for this is the road to emulation, by which we may achieve something that can hold up its head proudly in company with the greatest of the Classics.

NOTES

Sir John Simpson and the R.I.B.A.

THE letter from the Secretary of the R.I.B.A. which we publish on the subject of Sir John Simpson's withdrawal from the R.I.B.A. (see page 457) will hardly, we think, be accepted by the general body of the members as a completely satisfactory sequel to the correspondence we have already published. His impersonal phrase, "it has for some time past been felt," provokes inquiry as to when this feeling came to the knowledge of the Council, and why Sir John was not made aware of its existence. It would be interesting, too, to learn when the "new policy," to which Mr. MacAlister refers, was decided upon and whether the "Minute," which presumably records it, was communicated to the representative whose displacement it implied. As to there having been no intention of discourtesy, it is not, as a magistrate recently remarked in reply to a similar excuse, a question of intentions but of facts. It would have been more satisfactory to admit that this action of the Institute has been something of a blunder which calls for some ameliorating action.

Preservation of Ancient Buildings.

THE interest aroused and the fund created by the Royal Society of Arts for the preservation of ancient cottages should not lead us to forget the almost equal importance of the fine barns and outbuildings which, in many cases, are of such noble architectural character. We have only to think of the Cotswolds to recall the instances where fine old outbuildings, magnificent architecturally, have for years now been falling out of repair, their original use being superseded through different methods of farming. Such noble buildings are no less historically than architecturally a part of the national inheritance, and the replacing of them by corrugated iron erections are an eyesore in most country districts. Ought these not also to be saved from decay? Antiquarian value of this kind is one to be saved from ruthless destruction, or continued neglect. In writing on such a subject our thoughts turn naturally to another of its aspects. Has any fine example of the old farm wain, with its chamfered wood-work and delicious iron trappings of such matchless grace and beauty in construction, yet been secured for a museum?

Disappearing Landmarks.

THERE is something very touching in the disappearance of old landmarks with their many associations to those who have long connected them with the locality as one of its greatest charms. Many will recall the little island of old-world character close to Gunnersbury Park, with its old farm buildings impressive by their size and character, and the lovely tone of the red tiling upon them, and the panelled brickwork of the stabling on the roadside. The Manor House close by, which stood embowered in trees and surrounded with high walls through which a 17th century gateway gave entrance is, with th of the buildings, now pulled down replaced by new buildings. Th horsepond with its white posts and has been forced back behind wa widen the road for the ever-incr motor traffic, and its tranquil sur ings no longer greet us. But thou miss all this, there should not b hostility to changes which time a different needs of to-day entail up Nor need we be much concerne "the old order changeth," when change is but the herald of char less attractive. It is when we se ancient dignity replaced by modern dom that we realise the need for c in urban development.

A Curiosity of the Strand.

THE demolition of the promontory of bui between the Hotel Cec the Tivoli Cinema i Strand has involved passing of Bewlay's tobacco sh rather quaint survival of Victorian design. The London corresponde the *Manchester Guardian* recently h interesting note upon it, in whi pointed out that it is one of the few in London elaborately designed in a and an artist's conception of wh tobacco shop should be. "You ca trace in the filigree work over the the words 'East India House,' supp on either side by little elephants. interior of the shop is as elaborate a old second empire room in the Royal. ging
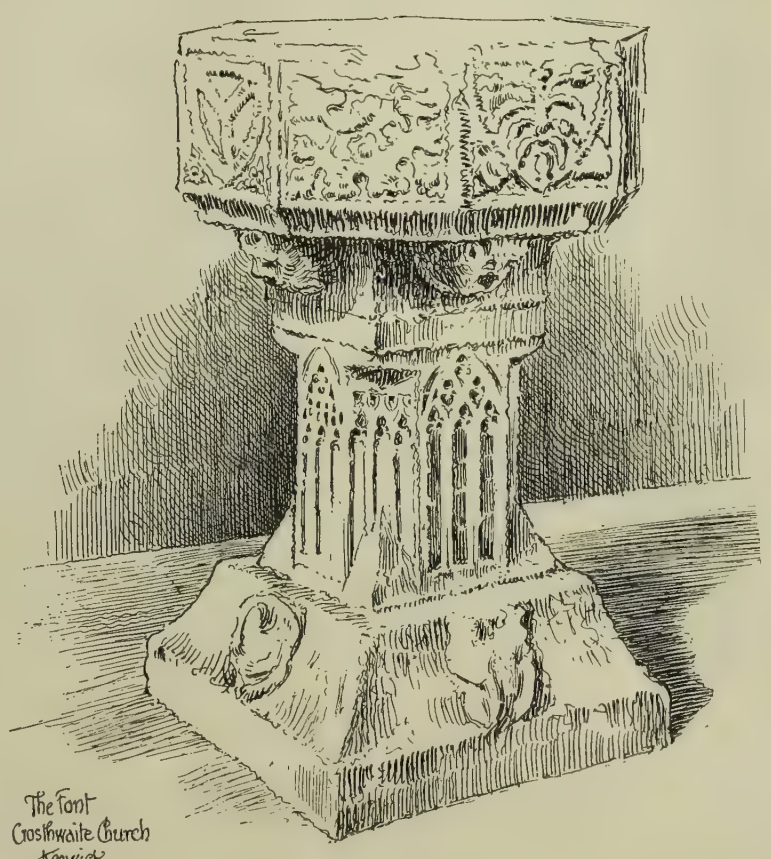
lon.

Not many years ago the *Morning Post* building was erected in Aldwych, facing Waterloo Bridge, and it has now become a London land-mark. What a shock the returned traveller would have on seeing once again the familiar *Morning Post* building. Through the upper windows appear a forest of scaffold poles, and emerging from the roof a huge derrick appears. All these excrescences are the essential preliminaries to the addition of two stories to the building. To the layman it must be something of a puzzle how this great derrick could be erected from the inside of the building, and truly a cunning hand and much experience are necessary to the achievement of such miracles. We hope that the excellent proportions of the building may not be marred by the new stories, and it will be interesting to see how the architects solve the problem of the dome which crowns the Strand angle of the building and forms a balancing feature to the dome of the Gaiety Theatre on the opposite corner of Aldwych.

An Old-World Village.



The sketch of Westerham, Kent, which we publish on the facing page, has a dual interest at the present moment. In the first place, it shows the memorial to General Wolfe who was born in Westerham, and whose bi-centenary has just been celebrated; and in the second, it shows very charmingly the unspoiled character of this delightful village. The Grasshopper Inn, which is seen on the left of the sketch, a type of old-world hostelry of which so many fine examples have unhappily disappeared, is reputed to date from the thirteenth century. A further point of interest in the sketch is the church spire, whose rather stumpy proportions are somewhat uncommon in village church architecture.

The British Association.

Though architecture and art did not come under discussion at the British Association meetings, the subjects dealt with have, in a sense, their relation to the former. Biological science, as it clarifies and expands our knowledge of life on the physical plane, found expression in the President's address, though it is not so much the question of the origins of life, as to whether it is all directed that concerns us most of all. It has been said that the direction of life to-day is towards science and away from art and poetry, but this it appears to us is to misunderstand the nature of both. Art and science in their discoveries reveal a universe resting on the majesty of law.

A Cinema Anthology.

The October *Architecture*—to be issued at the beginning of next month—will contain detailed plans and elevations of a number of modern cinema theatres of varying styles and planning. Each will be accompanied by a full description, while a further feature of the issue will be a comprehensive article by Mr. Edward A. Stone, architect of the Astoria Cinema, and joint architect (with Mr. Bertie Crewe) of the new Piccadilly Theatre, on the subject of "Modern Cinema Planning." Amongst features of purely architectural interest will be a further illustrated contribution on "Axes and Vistas," by Mr. E. Maxwell Fry—dealing with All Souls' Church and Upper Regent-street. Reservations for this issue may now be made.

GENERAL NEWS

Professional Announcements.

Mr. A. H. E. Gellender, Holsworthy, has been appointed surveyor to the Kingsbridge, Devon, Urban District Council, in the place of Mr. J. Hole, who has received a similar appointment under the Wrotham (Kent) Urban Council.

Mr. C. D. Coe, borough engineer of Wrexham, has been appointed chief electrical engineer to the Hereford Corporation.

Mr. S. J. Solomon's Estate.

Mr. Solomon Joseph Solomon, R.A., of White Cliffe, Birchington, who died on July 27, aged 66, left estate of the gross value of £16,478, with net personalty £15,291.

The Jordans Meeting House.

The historic Quaker meeting house at Jordans, Buckinghamshire, where William Penn is buried, will be shut for some weeks, as the ceiling, which has been dangerously cracked for some time, has now given way, and probably the whole will have to be renewed. The building dates from 1688.

Historic City Site.

La Belle Sauvage, Ludgate-hill, one of the more historic spots in the City of London, is, we learn, to be put up for sale next month. As far back as 1453 an inn, which would probably be used by Shakespeare and other players, stood on this site, and was known as "Savage's Inn," because the owner was named Savage, and alternately as "The Bell in the Hoop." Later on the name became "Ye Belle Savage."

Proposed Clydebank War Memorial.

Three proposals for Clydebank war memorials have been put forward—a carillon of bells to be placed in the tower of the Municipal buildings, with a clock and Westminster chimes; a wayside well, and a pipe organ for the Town Hall. The Town Council has agreed that a memorial be erected; that public intimation be made of the proposals under consideration, no definite scheme to be decided till it is ascertained to what extent the appeal for funds is responded to.

South Australian Development.

Mr. Butler, the South Australian Premier, has announced in Parliament that schemes have been submitted to the Development and Migration Commission for approval involving a loan of £710,000. The proposal consists of the acquisition and the drainage of 5,000 acres in the south-east and the construction of roads through the River Murray Mallee lands, and the building of 32 large reinforced concrete underground tanks on the west coast, which is fast becoming an enormous wheat province.

Roman Temple in Essex.

Excavations at Harlow, Essex, carried out under the supervision of Mr. Miller Christy, of the East Anglian Archæological Society, and Dr. Mortimer Wheeler, of the London Museum, have resulted in the discovery of the ruined foundations of a Roman temple and many interesting relics of Roman times, including coins of Aurelius Cunobeline and Tasciovanus, potsherds, fragments of Roman bricks, two curiously shaped sickles, bronze fibulas, and black, red, and white tiles, which appear to be the remains of the tessellated floor of one of the earliest Roman temples in this country. The work of excavation has been suspended, but will be resumed at a later date.

Proposed New Town Hall, Blackpool.

The Town Council has resolved that with regard to a proposal to erect a new town hall on a site situate in Stanley Park, that the Borough Surveyor be instructed to submit a report showing the exact area of the site available for the erection of the proposed Town Hall, and the value of such site to-day in respect of (a) the plot situate in Stanley Park; and (b) the present Town Hall site with the adjoining premises bounded by Lytham-street, Market-street, Church-street and Town Hall-street, with an estimate of the revenue obtainable from the last-mentioned site if it be developed for the purpose of shops, offices and other buildings.

North Middlesex Regional Planning.

Harrow, Wembley and Wealdstone come within the area of the North Middlesex Joint Town Planning Committee arrived at a couple of years ago. A report issued by Messrs. Thos. Adams, Thompson and Fry has been accepted in its broad principles as a guide for the constituent local authorities when they carry out their own district planning. Thus the local schemes become co-ordinated, and fit in together for certain common principles. These include special roads for improved communications, park-like strips alongside streams, and a definite ring of open spaces, besides preserving large areas of the existing market gardening districts for their present purpose in order to secure a rural belt. There should be no urban development beyond this green girdle, but rather should satellite towns be formed as complete units, and so avoid ugly indiscriminate building everywhere at once.

DECORATIVE PAINTING*

The author of this book is both a painter and a decorative painter, and he writes largely from personal experience of a subject which is infinite in outlook and bristles with difficulties. He tells us in his prefatory note that his book is made up of two elements. "*Argumentatively* it is an attempt to rehabilitate eclecticism, not the old eclecticism which contemplated the combination in a single work of art of every kind of virtue, but a new eclecticism which shall accept the fact that there is hardly any quality in painting which *may* not under certain circumstances be a merit, hardly any which may not *sometimes* be a vice. *Didactically*, there is in the book an attempt to supply some basis of training for painting *other* than that done from nature. So that there may yet be revived that old boast of the old painter, 'My eyes make pictures for me when they are shut.'"

From a careful perusal of the book we should say that its practical aims might be summed up in the opening paragraph of Chapter III ("Suitability to Architectural Requirements"). "Much has been said of recent years concerning the desirability of bringing architect and painter into closer relations, but little has been done towards promoting such an understanding. Each is a little afraid of the other, as of a collaborator with whose mental processes he is not quite familiar." We suggest that the book will do more than a little in the direction of bringing the architect and decorative painter into closer relationship through a better and mutual understanding of the elements in both arts.

The format of the volume is good and the illustrations, which in subject range from old Chinese paintings to Brussels tapestries, and from primitive Italians and Flemings to Post-Impressionists, are particularly happy as illuminating the text. The author is a facile writer who keeps himself on good terms with the reader by his intimate style, and in addition there is often a distinct vein of humour which comes as a pleasant surprise in a technical work.

There is no royal road to pictorial decoration. A set of maxims or aphorisms would in no sense meet the case; neither does the author attempt any such method, but his book is full of wise, suggestive, and straight talks.

* "The Art of Decorative Painting." By Walter Bayes, R.W.S. (Chapman & Hall.) 268 pages; 8vo, cloth. 21s. net.

COMPETITION NEW

Torquay Bandstand and Auditorium.

Torquay Town Council has agreed to scheme for the construction of an up-to-d bandstand and auditorium, to be built o the sea at the Princess Gardens. A premi will probably be offered for the most suita designed building, and it is estimated that cost of the whole scheme will be ab £20,000. Accommodation will be provided over 3,000 people.

Layout of Market-square, Nottingham.

The *Nottingham Journal* is promoting competition for the layout and treatment Market Square, Nottingham, and a prize £100 is offered for the best scheme submitt on or before Saturday, October 15. The co petition is open to all, and entrants are vited to send in sketches in perspective well as plans. Models will also be welcom There is no entrance fee. The plans will f be submitted to a committee consisting of President of the Nottingham and Derby Ar tectural Society (Mr. J. Woollatt) and Immediate Past President (Mr. H. A. D man), Mr. W. W. Gregory, F.R.I.B. Mr. J. Else, R.B.S., principal of School of Art, and the Editor of the *Notti ham Journal*, who will sort out those desi which are technically impracticable, and remainder will be submitted to Sir Ed Lutyens, R.A., who has been appoin assessor.

Further particulars may be obtained f the *Nottingham Journal*, Parliament-str Nottingham.

COMPETITIONS OPEN.

Municipal Buildings and Business Premises, Herne Bay. Premiums: £150, £100 and £50. Professor A. E. Richardson, F.S.A., F.R.I.B.A., assessor. Apply Clerk to Council, Westminster Bank House, Herne Bay. Deposit of £1 1s. required:	Particulars published in Send "Builder," in d July 8 Oct.
Municipal Buildings, Wimbledon. Premiums: £200, £150 and £75. Mr. H. V. Ashley, F.R.I.B.A., assessor. Apply Mr. Herbert Emerson Smith, LL.B., Town Clerk. Deposit of £2 2s. required:	July 15 Nov.

MEETINGS

Town Planning Tour in Scotland.

Members of the Garden Cities and Planning Association, who are making this autumn in the North of Englan Scotland, have visited the Roman w Hexham. On Monday they went to gow, and a conference was opened i evening on Regional and Town-Plannir velopment in Scotland, by Mr. B. S. roe. As compared with England, Sc is far behind in town planning. Whe England 373 local authorities have planning schemes in hand, covering acreage of nearly 3,000,000, Scotland, date, has only two. Glasgow has be scribed as a model of local governme of municipal experiments, and the m of the Garden Cities party visited on M some of the 14,000 one-roomed tenem

The Bridge at Semur.

READY-MADE HOUSES

By JOHN ANGUS.

A few days ago I came across, in a provincial paper, a whole page devoted to housing and new houses. I counted 40 advertisements of "superior" houses to be erected on various estates in the neighbourhood. All the advertisements included the name of the builder to whom application should be made, and most of them were accompanied by illustrations. With one single exception they expressed all the faults of the cheap villa residence, and the ultimate horror of the meanness of mean streets. The exception, advertised by a limited company, had the appearance of having received the attentions of an architect. It was free from the usual paraphernalia of the builders' houses—fussy gables, barge boards, sham half-timbered work and the fret-work verandah—and some sense of proportion had been secured in the windows.

There was a theory, submitted by many writers, that post-war architecture was to be lean, straightforward building, with no nonsense about it. It was to be a rational expression of certain facts: we were poor, costs of labour and materials were high—so high, in fact, that a dole was granted by the State to help us to build a house. (Incidentally, this is a better argument, and it is certainly resented less, than the one which seeks to prove that a national love for vulgar display was eradicated by a European war.) Judging by these illustrations, the houses are as disappointing architecturally as those we were accustomed to in pre-war days. And the amazing thing is that the negative effects of poverty have not produced the architectural virtues. The point is significant, and contains a fascination. Can it be that the builder is using the subsidy to keep alive what Professor Reilly calls the "fly-blown philacteries of dead ornament"? Or is it that the builder can still supply his full repertoire of effects at a lower price than the simpler and plainer building? One feels like adding "sound, honest building," but this would be to confuse the issue. There is no finality to this subject unless there is a comparison of equal things. It is the popular fiction that the house designed by the architect is expensive, not because it is built of better materials, but because it is designed. Looking at these illustrations, one might be pardoned thinking that he would be a poor architect who could not make an excellent living if he received as his fees the value of the silly ornament that could be scrapped with advantage.

If we attempt to compare equal things—value for money in materials and workmanship—I have said that the question will never be settled. Nor do I think it can be in the builders' interest to have it settled. I may be wrong, but I rather fancy, human nature being what it is, that I should be a poor builder if I could not make at least 15 per cent. more profit building for myself than under a contract to an architect. The absence of competition, in the first instance; the privilege of using my materials, instead of the necessity to supply certain materials, must be important items in pounds, shillings and pence. I frankly confess that I might even be guilty of harbouring the thought that I also would encourage the belief that the architect was a luxury. In this connection a builder told me that he did not like the plain mouldings of a certain architect: nevertheless, he built a replica of the house from the architect's drawings and sold it for £200 more than the cost of the architect's house.

I have never been able to follow the arguments of those who have likened the architect to the bespoke tailor, and the builder to the manufacturer of ready-made suits. I know when a suit is cheap and nasty, but I am certain that the houses I am discussing are not cheap enough even if they are nasty. The well-tailored suit of good cloth is an accepted specification, and it has been applied to the architect's house. I suggest that it is possible to have a well-tailored house of mediocre materials, and that this is what the builder does not provide. After all, there must be some sense of proportion in values and qualities of materials. Everyone in these days cannot afford the best materials, even if, as is generally admitted, the cheaper article is inferior. If the architect will only work with the best materials (an assumption which I do not think is correct), then it remains for the builder to exploit the market in cheap materials, ugly buildings, and high prices. I have no actual knowledge that the houses I am discussing are dear; my reason for thinking so is that they carry far too much unnecessary ornamentation to be cheap. There is no attempt to get worthy results out of poor materials by what Mr. Charles Marriott calls "sheer rightness of design without the relief of ornament." To this extent the houses are both expensive and tawdry, apart from any questions of weak foundations, undersized scantlings, or unseasoned wood.

Mr. Lewis Mumford, writing about American houses, says: "the great mass of moderate houses are no longer framed for some definite site and some definite occupants; they are manufactured for a blind market." . . . "The chief thing needful for the full enjoyment of this architecture is a standardised people. . . . The manufactured house is set in the midst of manufactured environment. The quality of this environment calls for satire rather than description." Mr. Mumford, I think, is right in more senses than one in his reference to the "blind" market.

To me it appears an absurd statement that the builder provides houses that people want because the architect is unable to do so. To put it otherwise, the builder can supply me with a ready-made house that will fit me better than if I had it designed to suit my own requirements. The idea is absurd.

Either civilisation has stamped us in a mould or we are too lazy to use our common sense. We have one view to the North all week and another view to the South on Sunday. If we are lucky enough to live on the other side of the street we shall have the sun at breakfast all the week. That is how we live: the builder and the position of the kitchen settle that for us. One may as well be frank about what people want: they want a cheap house and they think they are getting it.

The houses on the page before me are all for sale. It is not a question, therefore, of providing ready-made houses on the hire-purchase system. The purchasers obviously have the money to obtain some of the desirable things in a house other than mere cheapness. The combination of circumstances responsible for this mass production of ugly dwellings is easily understood and difficult to remedy. The solution might come through the architect if there were unanimity about the diagnosis of the disease. The body of gentlemen responsible for that entertaining book, "Architecture, a Profession or an Art," have now had ample opportunity to view the results of their sophistry. In their efforts to prove that the architect should not be legalised, they trusted implicitly in the latent capacity of the people for good architecture. Craftsmanship and vernacular building formed the essence of all good architecture in the past as it would in the future. Unfortunately they seem to have confused the moderating influence of the mind with dexterity in the use of a particular tool.

The facile generalisation that the whole structure of industrialism is wrong is now submitted as an excuse for our dreary efforts in housing, but the fact remains that these architects accepted a correct theory and refused to see it in practice. They refused to see that the builder was the nearest in kin to the direct line of craftsmen responsible for our traditional form of building. To this extent, therefore, we have a vernacular building of sorts, and heaven knows it is nothing to be proud of. Lack of discipline in the mind and the machine has outstripped the discipline of the hand.

Apparently architects are precluded from becoming builders. Standing, as they do, between the builder and an unbelieving world, they have no stock of "desirable houses" to prove their case up to the hilt. The position reminds one of Mr. Chesterton's observation upon public taste: "When they walk behind the brass of the Salvation Army band instead of listening to harmonies in Queen's Hall, it is always assumed that they prefer bad music. But it may be merely that they prefer military music, music marching down the open street, and if Dan Godfrey's band could be smitten with salvation and lead them they would like them even better." One could wish that architects could be smitten in the same way rather than that they should spend their time in scolding a nation for its decadent architectural taste. Architects have a pleasant method of explaining ugliness by saying that the public is not sufficiently educated in architecture. This is true, of course, but it would be much truer if education could be taken to mean common sense. I am not an architect, but I feel I should understand more about taste, in its relation to opportunity and the purse, if an architect were to write every one of these for builders and undertake to re-design their houses. He would take for his fees the value of the discarded ornament. The replies would shed some light upon domestic architecture in its relation to the people.

A ROUND CHURCH IN HEREFORDSHIRE

As the result of excavations which have been carried out by Mr. G. H. Jack, the county surveyor of Herefordshire, the foundations of a round church of the type of the Temple, and buildings such as those at Cambridge, Northampton, and Ludlow, have been discovered at Garway, a little village on the border of Monmouthshire and Herefordshire 11 miles west of Ross. These foundations join up to a curiously carved Norman archway between the chancel and nave of the existing church, which dates from the 14th century. The church, as it now stands, substantially as it must have appeared in the early 14th century, says *The Times*. It is composed of a nave with west door, a chancel with square end, and a south chapel to the latter. The earliest portion is the chancel arch. This arch is of three orders with Norman detail, the soffit of the inner one having unusual treatment. The south chapel is entered from the chancel through two arches, supported by massive cluster and banded columns, dating from about 120 The nave apparently dates from the early 14 century, possibly after the Knights Hospitallers took over the property. It is shown being within a few inches of the same length as the chancel.

The present nave is built entirely with the earlier round building, hence its small dimensions. It would seem probable that the reconstruction took place on the taking over of the buildings by the Knights Hospitall and that in the interval or before, the nave had become ruinous. It had been necessary in 1313, to effect considerable repairs to the tiled roof of the chancel. At the same time the pigeon house is reported as being broken down, hence its rebuilding in 1325, from which it may be inferred that the building had been allowed to fall into considerable disrepair. The discovery of the round nave accounts for the position of the tower. The tower originally lay entirely detached, outside the nave, on a line through the north west angle of the present nave. In this position it would have left the west doorway and the circular nave entirely unobstructed. The discovery brings the number of round churches existing, or known to have existed, in this country to 12, those built by the Templars numbering six.

CORRESPONDENCE

[While we are glad to publish letters on professional and other matters of interest to our readers, it must be understood that we do not necessarily endorse the remarks of correspondents, who will oblige us if they will express their views as briefly as possible.]

Sir John Simpson and the R.I.B.A.

Sir,—In reference to Sir John Simpson's letter and your editorial note in your issue of September 9, it has for some time been felt that the Institute should be represented on the Council of the British School at Rome by someone who is actively working on our Board of Architectural Education, and that the proper thing for the Council to do is to nominate the Chairman of our Board during his term of office to represent the R.I.B.A. on the Council of the British School at Rome. Consequently, when my Council was informed recently that Sir John Simpson's term of office had expired, it was decided to put the new policy into effect and nominate Mr. Fletcher, the new Chairman of our Board.

I need hardly add that there was not and never could have been in the mind of any member of the Council a thought of acting in any way with discourtesy to Sir John Simpson.

Appended to this letter is a copy of the letter which was sent to Sir John Simpson after the Council meeting at which the matter was settled.—Yours faithfully,

Ian MacAlister,
Secretary, R.I.B.A.

[*Letter Referred to above.*]

July 22, 1927.

British School at Rome.

My Dear Simpson,—The Council have just been informed that your term of office as one of the two representatives of the R.I.B.A. on the Council of the British School at Rome terminated in June. The Council have asked me to convey to you their very cordial thanks for all the valuable work that you have done in this connection during the exceptionally long period of your appointment. It is, I think, no less than 16 years since you first undertook this duty for the R.I.B.A.

You will, I am sure, be interested to know that in order to ensure the maintenance of close touch between the Board of Architectural Education and the British School at Rome, the Council have appointed as your successor Mr. Henry M. Fletcher, the new Chairman of the Board, so that you will know that the work you have done in the past will be in good hands.

With kind regards,

Yours sincerely,
(Sgd.) Ian MacAlister,
Secretary.

Sir John W. Simpson, K.B.E.

The Porch of the Temple Church, London.

Sir,—I think I may be able to throw some light on the matter to which Mr. Davidson refers in the letter you published on September 9, and I think I shall be showing no discourtesy to the Benchers of the Middle Temple if I refer to the fact that this Society was consulted by them, and thereafter caused a report to be made on the porch by Mr. William Weir, whose work in connection with ancient buildings is well known to your readers and admired by many of them.

In his report, which was considered and approved by my Committee, Mr. Weir recommended the cleaning and treatment of the stone, but no renewal. Later the Society was informed by members and strangers that the arches and other stones were being removed from the porch, so that new stones might be set instead. There is doubt that any of the masonry which was to be seen in the porch immediately before the present work was undertaken was original. But while doubt remained, this Society felt that there should be no renewal of stonework, particularly as it was of opinion that this was structurally unnecessary.

During the work I made a careful examination of the masonry and the jointing of the beds, etc., and the memorandum I made at the time—a week or so ago—may be of interest to Mr. Davidson and your readers. I therefor attach it as it was written, for you to print if you think it worth while.

A. R. Powys.
Secretary.

Temple Church.

The Porch.

September 2, 1927.

I visited the porch of the Temple Church to-day at the request of two members of the Middle Temple. I climbed on to the scaffolding beneath the west arch of the porch and examined the exposed portions of the beds and joints of the stones which have not yet been removed. These were worked with a tooth drag in a manner unlike any thirteenth century work I have seen. Similarly I examined the under part of the east capitals of the north and south arches of the porch and found them worked in a like manner.

The jamb stones beneath these capitals with the shafts have been cut back to within an inch or two of the back of these stones. These jamb stones were bedded in Roman cement, and where tooling was visible it was of a similar nature to that described above, except that it showed some preliminary chiseling. I noticed but one stone which I felt was original work, and this was in the heart of the wall behind the carved jambstones on the south of the west doorway of the church. I examined as closely as possible the carved archstones of the west doorway and I felt that none of this carving was left unspoiled from the mediaeval craftsmen—indeed, my impression was that this was modern work of the 1840's.

R.I.B.A.

ELECTION OF MEMBERS.

Associates who are eligible and desirous of transferring to the Fellowship class, are reminded that if they wish to take advantage of the election to take place on December 5, 1927, they should send the necessary nomination forms to the Secretary, R.I.B.A., not later than October 1, 1927.

LICENTIATES AND THE FELLOWSHIP.

The attention of Licentiates is called to the provisions of Section IV., Clause 4 (b) and (cii), of the Supplemental Charter of 1925. Licentiates who are eligible and desirous of transferring to the Fellowship can obtain full particulars on application to the Secretary, R.I.B.A., stating the clause under which they propose to apply for nomination.

R.I.B.A. KALENDAR, 1927-28.

The Kalendar for the coming session is now in course of preparation. Change of address, etc., should be notified to the Secretary, R.I.B.A., 9 Conduit-street, W.1, as soon as possible.

The President R.I.B.A. has been elected an honorary member of the Associazione Artistica Fra I Cultori di Architettura, Rome.

House at Holmbury St. Mary: Staircase.

Mr. Oliver Hill, Architect

[Note.—The centre post is from an old windmill.]

K

ARCHITECTURE IN DALMATIA.—III

By MARTIN S. BRIGGS, F.R.I.B.A.

After a surfeit of architectural sightseeing in the interesting towns of northern Dalmatia, one arrives at Ragusa with the determination to spend some of one's time, at any rate, in resting. But though the sunshine and the semi-tropical vegetation of that wonderful little city provide the right surroundings for rest, the place is so full of historical associations and architectural remains that it is impossible to idle all the time away. Here one is a long way from England, almost in the latitude of Rome, yet much further in hours of travelling, and over the hills behind the town one comes in a few miles to villages with minarets and mosques which were Turkish fifty years ago, and are still largely Turkish in character. But Ragusa itself is almost pure Venetian, yet Venetian with a difference, that difference being due to Hungarian influence from the north and more exotic influences from remoter quarters.

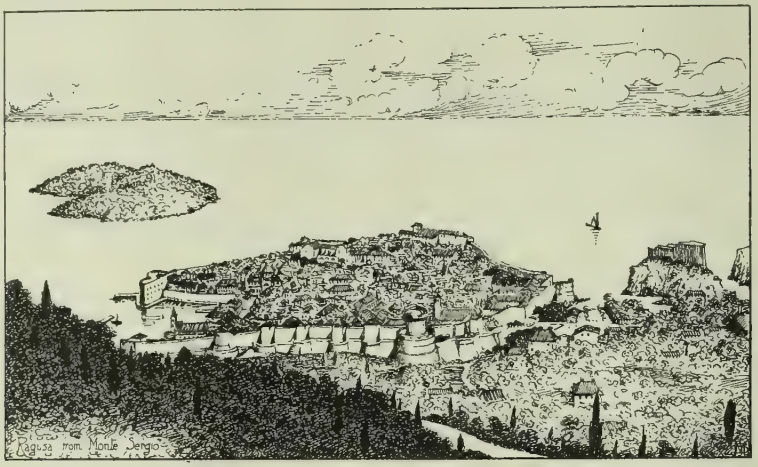

Fig. 10.—**The fortified town of Ragusa.**
Drawn by Mr. M. S. Briggs.

The little town, for it is comparatively small though it looms so large in history, stands on the most fertile strip of the Dalmatian coast, surrounded by cypresses and tamarisks and olives. Roses bloom there all the year round, and orange trees flourish in the cloisters of the Franciscan and Dominican monasteries. It was founded by refugees from the neighbouring Greek colony of Epidaurus (now occupied by the village of Ragusavecchia) in 639, the same year in which the inhabitants of Salona flocked into the fortified palace of Spalato. From that remote date up to the time of Napoleon it maintained a more or less independent existence, sometimes paying tribute to the successive rulers of Dalmatia, whose diversity makes the history of that province so complicated, sometimes forming part of the Dalmatian territory, but at intervals practically—and from 1420 literally—independent. From 1420 to 1815 it had its own ruler and its ambassadors at foreign courts, as the Republic of Ragusa, more powerful than those other tiny principalities—San Marino, Monaco, and Andorra—which for centuries resisted the great nations around them.

My sketch (fig. 10), made on a sunny April morning from the steep wooded slopes of Monte Sergio, that rise behind the town, is intended to show that Ragusa (or "Dubrovnik," as it is now officially known in the Slavonic tongue) is "one of Nature's fortresses," as Luigi Villari describes it in the excellent English history of the republic that Messrs. Dent published in 1904. At first it did not extend beyond the line of its one broad street, the Corso, which up to the middle ages was a ditch separating the old town from the suburbs on the landward side. On the left of my sketch appears the campanile of the Dominican convent, and on the right—just behind the great round tower—the campanile of the Franciscan convent. These two convents guarded the two main gates of the city on east and west respectively—the Porta Ploce and the Porta Pila—and it was the duty of the stalwart friars to defend them. Then the walls were extended beyond the ditch on the land side, so that the suburbs were included and the two convents were enclosed within the city. With the exception of Carcassonne, I have seen no city that better preserves its mediæval fortified aspect.

Up to fairly recent times, the little harbour on the left of my sketch served the needs of the town, and the small vessels that ply to Ragusavecchia still embark their passengers there, but the new port at Gravosa—some three miles to the west—deals with modern shipping, and there is situated the railway-station. I have hardly mentioned railways in these articles, because the traveller from Western Europe naturally arrives at Spalato or Gravosa by boat, but there are railways from both places that finally reach the central European trunk-lines at Belgrade, after a long journey through the mountains of Bosnia and Serbia.

Because of the town's compact plan within fortifications, the historic architecture lies within a small area and can be studied with the minimum of exertion. It is equally compact in point of date, for practically all the buildings of importance were erected between 1306 and 1464. The exceptions are the beautiful little Renaissance church of S. Salvatore, erected in 1520 to mark the gratitude of the citizens for their deliverance from a serious earthquake, and four large Baroque churches—including the cathedral—which replaced earlier buildings destroyed in subsequent earthquakes during the seventeenth century. Within a period of a century and a half, Dalmatian architecture passed through all the transitional stages from Romanesque to Renaissance, whereas in England and France the process took at least double this time. But in Italy Gothic was never the flourishing plant that it became in Western Europe, mainly because Roman tradition never died. So in Dalmatia, with Diocletian's great palace to keep alive the memory of Rome and with Italy just across the sea, we find the Dominican cloister at Ragusa built in the mid-fourteenth century in a style that still retains Romanesque

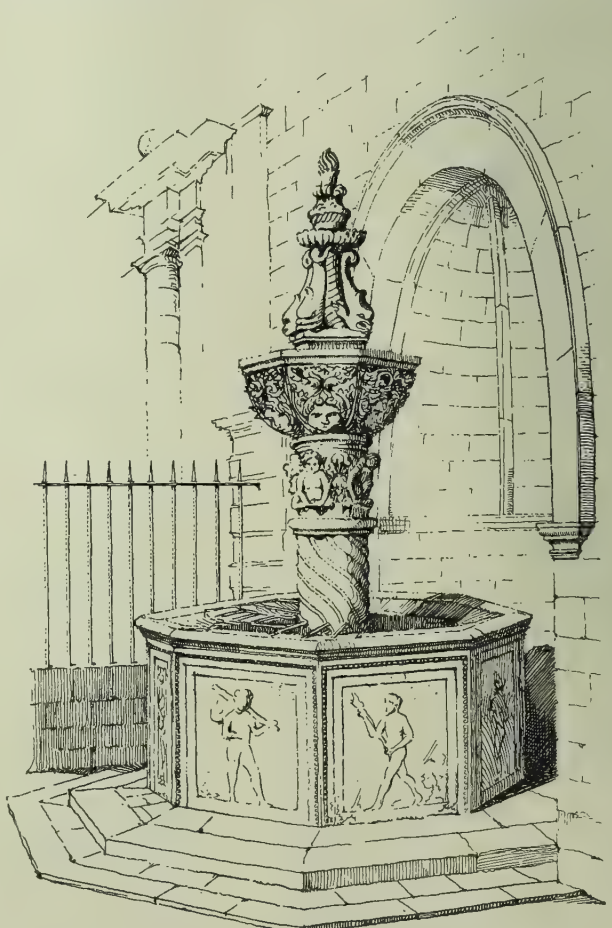

Fig. 11.—**Ragusa. "Onofrio's Fountain" in the Piazza.**
Drawn by Mr. M. S. Briggs.

characteristics, and the Franciscan cloister, thirty years older, might be transitional Romanesque. Other mediæval examples in Ragusa are the Dominican church (1306), of a definitely Italian Gothic type, the Sponza or Custom-house (c. 1312), in characteristically Venetian Gothic, and especially the Rector's Palace, the most famous building in the city. This remarkable design, which in some ways recalls the style of the Palazzo del Comune at Udine, in Veretia, is mainly the work of Onofrio de la Cava, an architect imported from Naples and not—as usually in Dalmatia—from the mother-city of Venice. His work here dates from 1435, and another of his buildings is the curious fountain illustrated in my sketch (fig. 11), a design that one would hesitate to call Gothic.

But Onofrio was closely followed by a herald of the Renaissance, Giorgio Orsini, whom I have already mentioned as the architect of the remarkable barrel-vaulted cathedral there. "Thorns and brambles of the old Gothic art clung to him," writes Sir Thomas Jackson, and yet the arcade of the Rector's Palace at Ragusa shows that when he rebuilt it in 1464 he substituted the round arches of the Renaissance for Onofrio's pointed arches. Fig. 12 illustrates the beautiful west portal of the Church of the Dance at Ragusa (1457). No architect visiting Ragusa should fail to see this charming example of Venetian Gothic, decorating the chapel of a pauper cemetery, and finely situated on the cliff just outside the Porta Pila.

Dalmatia is singularly deficient in monuments of the middle Renaissance, for the discovery of the Cape route in the sixteenth century put an end to much of her prosperity, and the conquests of the Turks had a like effect. Except for the little chapel of S. Salvatore at Ragusa (1520-36) in an early Renaissance style, and more developed work at Zara and Lesina by Sanmicheli, as well as the Loggia at Sebenico already mentioned, there are few buildings of note till we reach the latter half of the seventeenth century, when we find three large Baroque churches

Fig. 13.—Street scene in Trebinje (Herzegovina).

—the cathedral, the Jesuit church, and S. Biagio—and the smaller church of the Rosary, all in Ragusa. These buildings follow the standard type of Italian Baroque, displaying little of the frisky attractiveness of minor Baroque buildings in Southern Italy. It may be added that Ragusa employs an inspector or adviser to watch over her architectural treasures, and that he gave me several instances of vandalism prevented by his care and foresight.

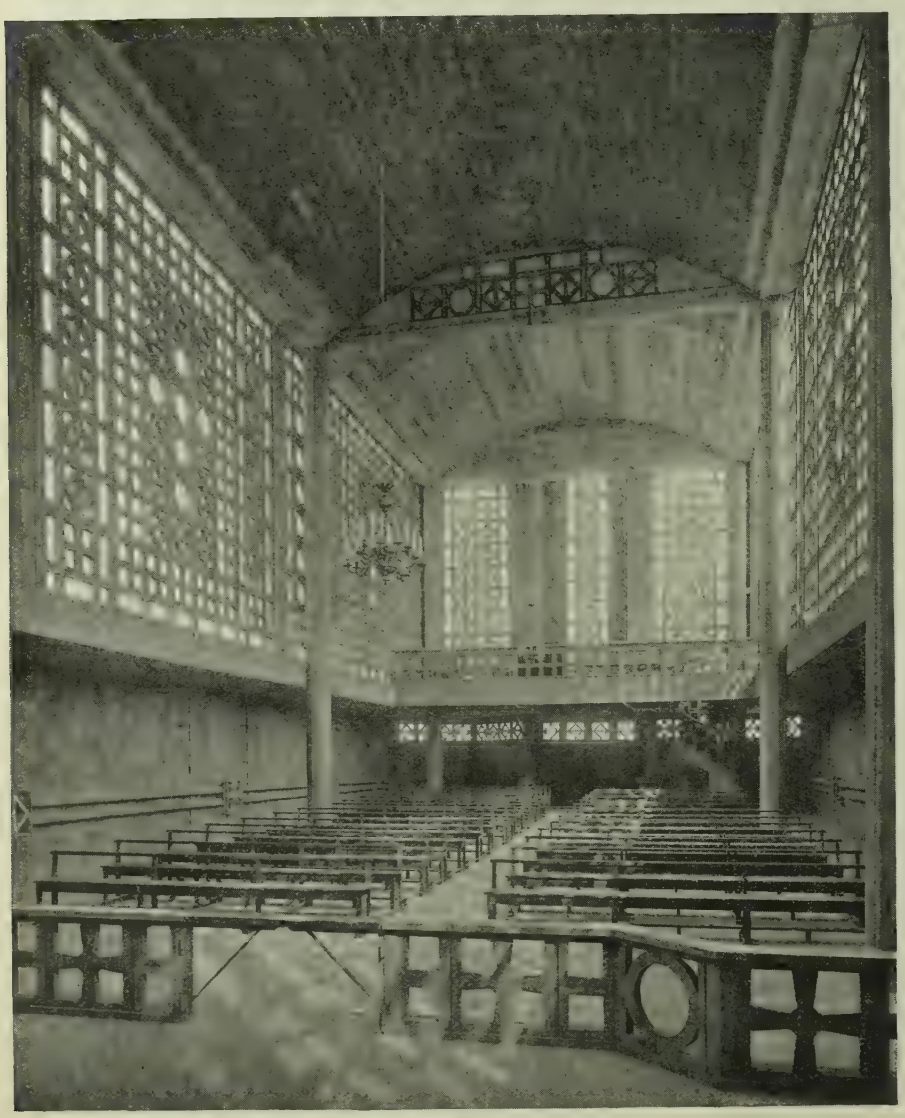
A few miles away, along a coastline of great beauty, lies the little town of Ragusa-vecchia, where the famous Yugoslav sculptor, Mestrovitch—now well known in this country—has erected a remarkable mausoleum in memory of a wealthy family of local shipowners. It is almost the last word in sculptural expression, and may be compared with his striking effigy of King Peter over the Porta Pila at Ragusa.

Having seen the short list of monuments that I have enumerated, and having allowed himself the luxury of absorbing the atmosphere of one of the most fascinating little towns on the Mediterranean, the architectural tourist might follow my example in visiting at least one of the Turkish towns that lie in the former provinces of Bosnia and Herzegovina. Serajevo, where the Great War was started, is the most important, but involves a long railway journey; Mostar is also some distance away, but Trebinje is less than an hour's motor drive from Ragusa. Here, on market day, one can see mosques and minarets in use (fig. 13), and a great variety of native costumes, including real veiled women and real Turkish girls in baggy trousers—a source of great joy to visitors. But the most remarkable excursion during my own short tour was the drive from Ragusa to Cettinje, in Montenegro, and back, nearly 100 miles each way. Cettinje itself is now a semi-deserted village, and can never have been more than a Gilbertian sort of capital, but Carraro is interesting; its noble harbour recalls a Norwegian fiord, and the marvellously engineered road rising from sea level some 4,000 ft. in thirty-seven hair-pin bends, and commanding grand views of the snow-clad Albanian Alps from its summit, affords an excellent antidote for any architect who has had an overdose of sketching and measuring.

(Concluded.)

Forthcoming Books.

Messrs. Batsford's Autumn List includes "Little Known Towns of Spain," by Vernon Howe Bailey, an example of facsimile colour printing from watercolours, with several drawings; "The Art of Pen Drawing," by G. M. Ellwood, with numerous illustrations of artists' work, and "Composition," an analysis of the principles of pictorial design, by Cyril Pearce, of the Art section of Reading University (these two works are in the "Practical Drawing" series); "Figure Construction," a brief treatise on drawing the human figure by Alon Bement; "Applied Art," a manual on graphic expression in handicrafts; the first volume of the new series of "The Artworkers' Studio," illustrating decorative art in colour; and the autumn issue of "Old Master Drawings," edited by Dr. K. T. Parker.



On the architectural side their announcements include a Record of the Life and Work of Raffles Davison, edited by Maurice E. Webb, F.R.I.B.A., and Herbert Wigglesworth, F.R.I.B.A.; Mr. W. H. Godfrey, F.S.A., F.R.I.B.A., contributes "The Story of Architecture in England," Part I. The Period of Church Building; Mr. Arthur Stratton, F.S.A., F.R.I.B.A., of London University, has prepared a series of practical diagrams on "The Styles of English Architecture"; and the present series of the Historical Architecture Library is completed by the issue of the late W. J. Anderson's "The Architecture of the Renaissance in Italy," also revised by Mr. Stratton.

A REINFORCED CONCRETE CHURCH

The new church at Montmagny, near Paris, has been erected to the design of Messrs. A. & G. Perret, the well-known French architects, whose reinforced concrete work has been the subject of much comment in architectural circles throughout the world. This new church has a length of 118 ft. and a width of 42 ft. 8 in. by a height of 42 ft. The tower rises to a height of 104 ft. In plan, the nave is very wide—practically the whole width of the church—the two narrow aisles being about 14 ft. high only; this is shown in the interior view.

The side walls of the nave, above the aisles, each consists of four reinforced concrete columns, the spaces between which are filled with tracery work in concrete, the pattern being formed of squares, crosses, circles, and triangles. These shapes are uniform in size, and by this means it was possible to use the moulds repeatedly and thus keep down the cost without producing a monotonous repetition of pattern.

The principal roof comprises a reinforced concrete vault on which is built first a hollow-brick vault and finally a layer of cement mortar provided with expansion joints. The total cost of the building complete, including heating apparatus, electric light fittings, altars, fonts, and furniture, was the remarkably small sum of £2,600, reckoning rate of exchange as £1 equals 125 francs.

Reinforced Concrete Church at Montmagny.

MM. A. and G. Perret, Architects.

SCHOOLS OF ARCHITECTURE & TECHNOLOGY

The Bartlett School of Architecture.

The Bartlett School of Architecture, including the Department of Town Planning, at University College, Gower-street, W.C., opens for the session 1927-28 on October 3. The study of architecture comprehends so many subjects and is so general in its application that it is essential for candidates to have received a liberal education before taking up this special work. To assist the student at the outset of his career, a curriculum has been arranged by Principal Professor A. E. Richardson, F.R.I.B.A., not only to ensure training on a systematic basis, but also to obviate as far as possible, the inevitable hiatus that occurs between ordinary school education and academic study. It is recognised that building is as much an art as it is a science, and that architects are artists who need to grasp not only the realities of the factors governing their work, but also the technique associated with each particular branch of it. An architect more than any other artist should be instructed to associate his work with the conditions of modern life; he must be familiar with the underlying principles of the sister arts of painting and sculpture. His knowledge of building should be based upon a close appreciation of history, tradition, and research; moreover, regarding the scientific aspect of his profession, he must be guided to regard construction as being organic and functional and not a separate and independent theory. The whole of the first term is devoted to encouraging appreciative interest towards building on the part of the student, and to showing by the close correlation of lectures and studio work how one branch is interdependent on another. By the time the student reaches the second year, he is ready to undertake simple essays in historical design combined with subjects in which prominence is given to construction. These studies widen the student's previous acquaintance with the architecture of ancient civilisations and extend to the Renaissance and modern times. During the third year students taking the certificate course qualifying for exemption from the intermediate examination of the R.I.B.A. concentrate mainly on design and constructional subjects, and prepare a specified number of designs combining construction with requirements likely to be encountered in modern practice. Work during the fourth and fifth years is confined to courses specially arranged for students taking the degree and diploma courses as well as for those students who elect to enter for the prizes offered by the R.I.B.A. and other bodies. Full particulars of the School may be obtained from the Secretary, University College, W.C.

Details are also available from the same source of a series of lectures and courses under the direction of the Bartlett School. Professor R. Elsey Smith, F.R.I.B.A., will lecture on "The London Building Acts as Affecting the Practising Architect"; Professor A. E. Richardson, F.R.I.B.A., will conduct an *atelier* for the study of advanced architectural design and will also supervise the evening courses on "The Design and Construction of Modern Buildings."

City and Guilds of London Institute.

The City and Guilds of London Institute was founded in 1878, incorporated under the Companies Acts in 1880, and received the grant of a Royal Charter by Her late Majesty Queen Victoria in 1900. It is an association of the Corporation and Livery Companies of the City of London instituted "for the purposes of all such branches of Science and the Fine Arts as benefit or are of use to or may benefit or be of use to productive and technical industries especially and to commerce and industry generally or any branch thereof and for the utilisation of such means as will promote the several exclusive purposes aforesaid." The operations of the Institute are divided broadly into three branches: (1) The City and Guilds (Engineering) College; (2) The City and Guilds South London Technical Art School; (3) The Department of Technology of the Institute. Amongst the technical subjects taught are brickwork, builders' quantities, cabinet-making, carpentery and joinery, heating and ventilating engineering, masonry, plasterers' work, plumbers and allied sanitary engineering and structural engineering. Full details may be obtained from the Superintendent, Department of Technology, City and Guilds of London Institute, 29, Roland-gardens, London, S.W.

Town Planning.

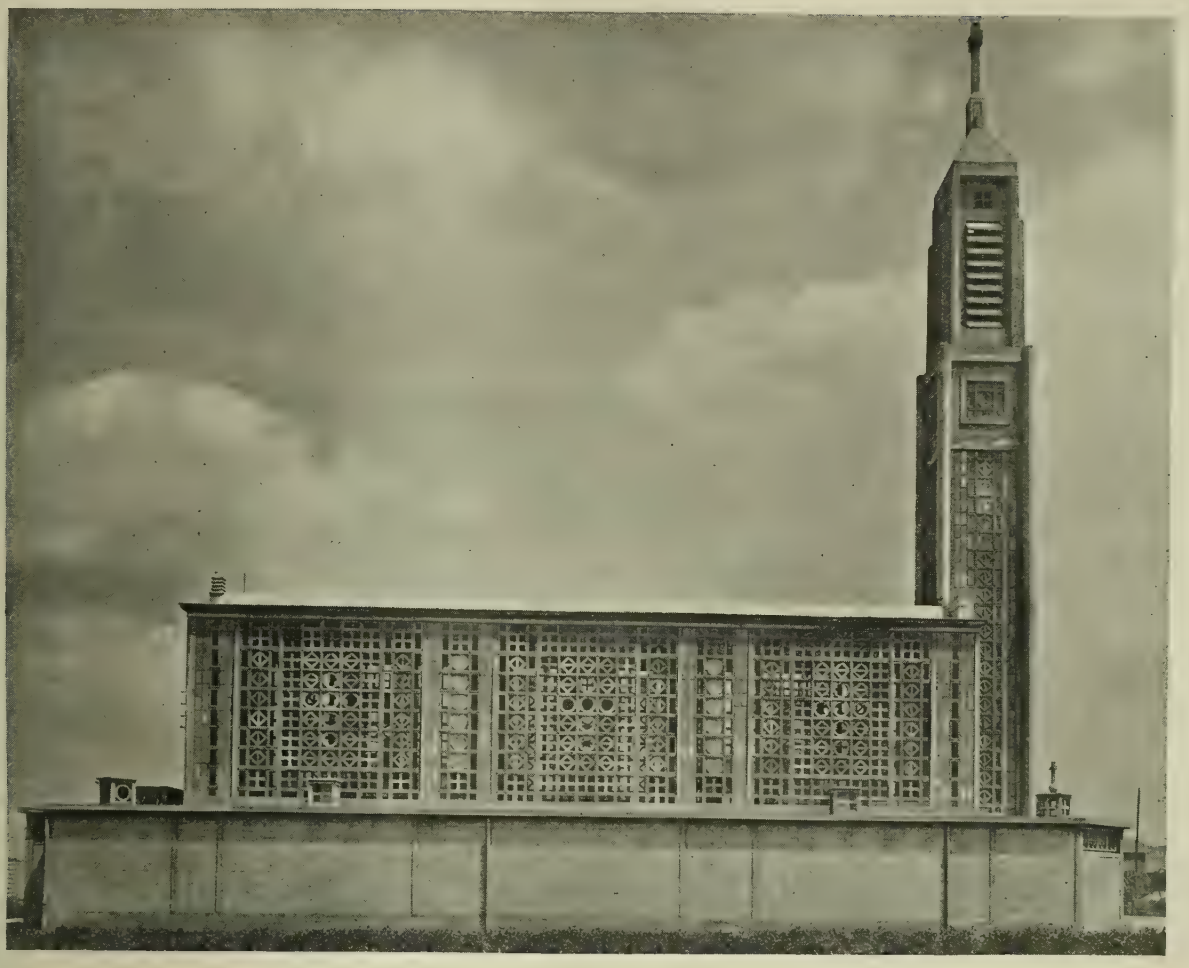
The following town planning progress in England and Wales for the month ended August 31, 1927, is recorded by the Town Planning Department, Ministry of Health.

Preliminary statements approved (Stage BB):—

Lancashire: Colne T.C., Preston T.C. (No. 2).

Preliminary statements submitted (Stage B):—

Yorkshire: York T.C. (Nos. 1a and 2a).



Resolutions received (Stage A):—

Essex: Epping R.D.C.

Gloucester: Bristol T.C. (No. 3), Thornbury R.D.C. (Bristol T.C.).

Lancashire: Chorley R.D.C.

Surrey: Haslemere U.D.C.

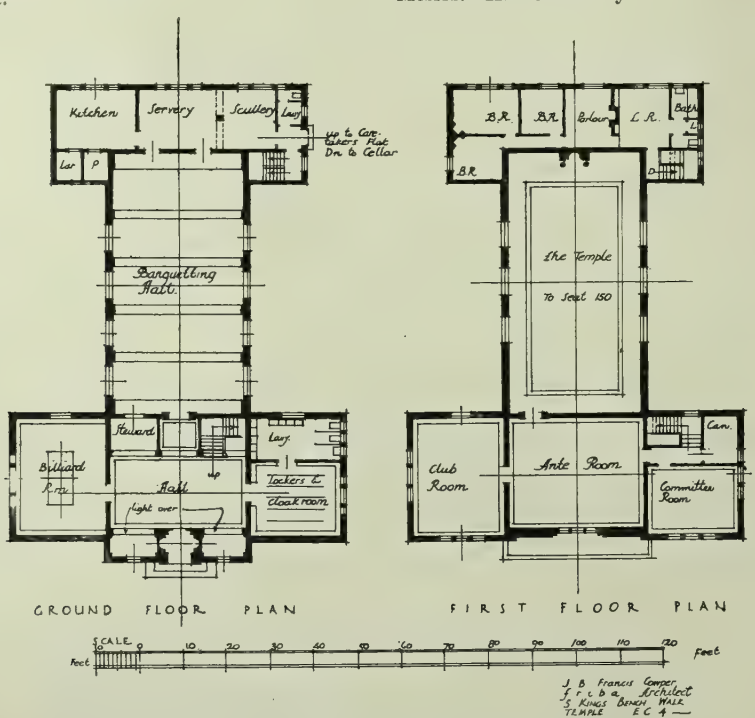
Seventh Church of Christ, Scientist, London.

The erection of this building, which is situated in Wright's-lane, Kensington, almost adjoining High-street, Kensington Underground Station, is now being continued. The southern half, which contains the board and committee rooms and other administrative accommodation, has been completed for some eighteen months. The Church itself occupies the upper portion of the main block, the Sunday School being on the lower ground floor. While access is given to the Church by means of staircases in the southern half, the two main entrances and the principal staircases will be in the northern section. At the present time approximately half of the Church—though still in skeleton form—is in use as a temporary auditorium. The walling generally of the building is carried out in brick of a warm tone with red quoins round the windows and at the angles. Portland stone is used for the string courses and round the entrances. The main entrance is being somewhat modified from that shown in the illustration.

Mr. Paul Phipps, F.R.I.B.A., is the architect.



Pair of Cottages at Ranksborough, Rutland.

Mr. H. S. Goodhart-Rendel, F.R.I.B.A., Architect.

Proposed Housing Scheme for a London Borough.

The drawings illustrated were prepared with a view to ascertaining the accommodation possible for erecting working-class dwellings upon an existing island site, situated in a congested area. In order to increase the area of the site it was proposed to extend the scheme over an existing street in the rear, thereby providing additional open space around the dwellings. The scheme represents a ten-story building containing 192 separate dwellings of varying accommodation. The building is placed diagonally upon the site in order to give the maximum amount of open space for light and air, garden, and playgrounds. It was also anticipated that with such an arrangement light and air to the adjoining buildings would not be affected to any great extent. The four staircase towers are designed to provide 7 ft. wide stairways separated by a rail and a large lift capable of carrying 15 persons, perambulators and milk floats. An interchange of escape is provided by carrying each staircase to the top of the building, where large open and covered playgrounds would be provided. The lifts would serve alternate floors to avoid frequent stops. The central tower shown would accommodate the smoke stack from the central heating and domestic water boilers, together with water storage tanks.

Messrs. H. Courtenay Constantine and Austin Vernon, F. and A.R.I.B.A., are the architects.

Proposed Masonic Temple, Cowbridge, Glamorgan.

Mr. J. B. F. Cowper, F.R.I.B.A., Architect.

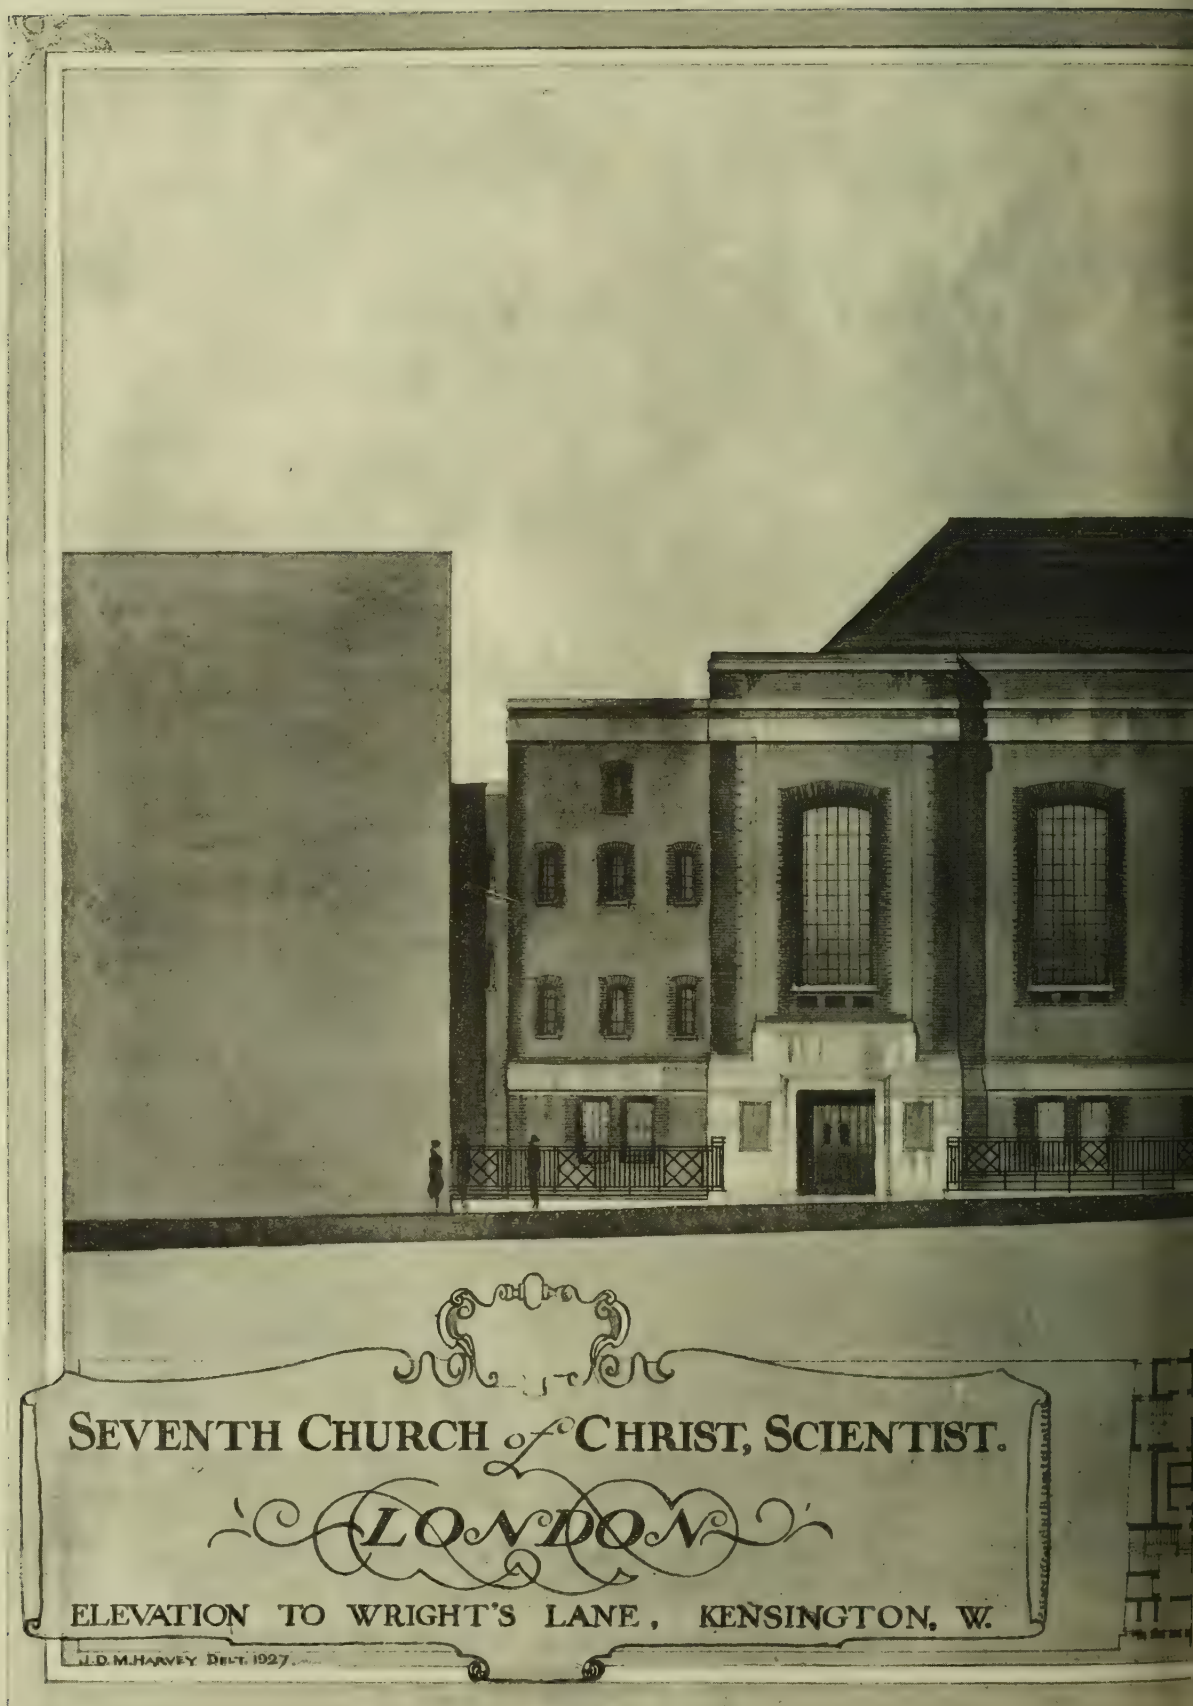
Proposed Temple, Cowbridge, Glam.

This building is to be built of brick faced with "reconstructed" stone. It was at first intended to erect the building as shown, but the scheme has been revised. The accommodation shown on the ground-floor plan will first be provided, and the other floor added later. It is hoped to use the building for club purposes and for the Masonic functions of the St. Quentin's Lodge. The building has been planned to leave as much space as possible for tennis-courts and bowling-green.

Mr. J. B. F. Cowper, F.R.I.B.A., is the architect.

National Provincial Bank, Piccadilly.

The original premises of the National Provincial Bank at the corner of Piccadilly and Eagle-place were designed, in conjunction with the flats above, by the late Alfred Waterhouse, R.A., in 1892. At a later date the property immediately in rear of this, facing on to Jermyn-street, was acquired by the bank, and the chambers of the bank were extended through on the upper floors to Jermyn-street as one property, the separate entrance in Jermyn-street being maintained. In 1925, owing to the expansion of their business, the National Provincial Bank wished to extend their premises through to Jermyn-street and make use of the whole of the lower part of the site. The difference of level between Piccadilly and Jermyn-street offered a difficult problem, which was overcome by maintaining the Piccadilly level for the whole of the public space, and by removing the strong rooms and managers' offices, originally on the ground floor in the old part of the bank, and using the whole of the Piccadilly end of the site for public space and clerks. The managers' offices and the Foreign and Securities Departments were transferred to the Jermyn-street end at the same time and a second entrance was given to the public space from Jermyn-street with a large lobby and flight of stairs. At the same time the entrance to the chambers, with its staircase and lift, were maintained, one of the conditions of the alterations being that this could not be removed. By keeping the Piccadilly level for the whole of the public space, a well-lighted lower ground-floor was obtained at the Jermyn-street end for additional clerks' space, and beneath this was placed additional strong room accommodation, connected by a new subway with the strong rooms in the old part of the bank.



Messrs. Trollope & Colls were the general contractors, and the following were subcontractors:—Redpath Brown & Co., steelwork; British Reinforced Concrete Co., reinforcement; Matthew Hall & Co., plumbing; J. Slater & Co., heating and hot water; Val de Travers, asphalt; Belshaw & Co., electric lighting; Anselm Odling & Sons, marble; J. Gibbons & Co., metal windows; Smith Major & Stevens, lift; Empire Stone Co., staircase;

ROYAL ARCHÆOLOGICAL INSTITUTE OF GREAT BRITAIN AND IRELAND

SUMMER MEETING AT CAMBRIDGE.

THE annual gathering of Institute members has recently concluded its session, held at Cambridge from July 19 to 28. Its President was the distinguished historian, Sir Charles W. C. Oman, K.B.E., M.A., D.C.L., F.S.A., M.P.; Dr. Cranage, its local Vice-President; and the Hon. Secretary, Mr. E. A. B. Barnard, F.S.A., upon whom the responsibility of the arrangements fell, in conjunction with the Hon. Secretary of the Institute, Mr. C. D. Hardinge-Tyler. It is not the first time that the Institute has visited Cambridge. There was a memorable visit in 1854, when the Prince Consort, H.R.H. Prince Albert, Chancellor of the University, honoured the Institute by his presence, when Professor Willis lectured on "The Collegiate and other Buildings in Cambridge," from which grew an elaborate work in four volumes on the subject, written by him and Mr. J. Willis Clark. The Institute was again at Cambridge in 1892.

There are few more attractive places for archæological research than Cambridge. It has Ely for its neighbour and a great store of interesting churches and mansions and picturesque towns within reach, and its colleges alone always provide an endless field for antiquarian investigation. The Cambridge colleges happened to be rich in the eighteenth century, and the Fellows decided to spend their superfluous wealth in building; so some old colleges were pulled down and new ones erected in the solid and dull style then in vogue. But that was not the fate of all, and we have still King's College Chapel, one of the three splendid examples of Perpendicular architecture, and there are others of much architectural interest.

The proceedings opened on

TUESDAY.

when the members were received by the Vice-Chancellor (the Rev. G. A. Weekes) in the Senate House, built by James Gibbs in 1722-1730. It is an imposing room about the building of which and the Library a mighty quarrel arose which long disturbed the peace of the University. It has an elaborate plaster ceiling and fine wainscoting, and some statues of worthies. Here Sir Charles Oman delivered his presidential address, and later on the Vice-Chancellor and Mrs. Weekes entertained the company to tea at Sidney Sussex College, and its buildings were inspected. It takes its name from the founder, Lady Frances Sidney Sussex, and was the second college founded after the Reformation, occupying the site of the house of the Franciscan Friars. The original buildings were designed by a notable architect of his day, Ralph Symons, in 1596, but they have been sadly knocked about. We read of re-buildings and mutilations, and finally Wyatt laid his evil hand upon the college and coated its walls with Roman cement. It took to itself some new buildings designed by Pearson in 1890, with rather an attractive cloister. The walls are adorned with many interesting portraits, including that of the foundress, Lord Montagu (d. 1681), W. Perrin (1602), and Oliver Cromwell, a member of the college in 1616.

Passing on to Jesus College, the company was received by the Master, Mr. Arthur Gray, and conducted round the college. It has interesting association with a Benedictine nunnery, the Priory of St. Mary and St. Radegund, and part of the present buildings are those of the nunnery, dating back to the thirteenth and fourteenth centuries. The plan is not collegiate but monastic. The transformation of the nunnery to the college would take too long to describe. It was done by Bishop Alcock of Ely in 1497 with much care and success. There have been many alterations and additions since that date, and some mutilations, especially in the eighteenth century, which pressed so heavily on the Cambridge collegiate buildings. The fine proportions of the entrance gateway were spoilt by the addition of a new story. The south front adjoining the Chapel was mutilated at the same time, and the cloister rebuilt in its present feeble style. Sash windows were inserted, but these have happily been removed. Bishop Alcock's crest—a cock standing on a globe—frequently appears. In the evening the members had the pleasure of hearing Professor A. Hamilton Thompson lecture on the growth of the university and town of Cambridge with lantern illustrations.

WEDNESDAY.

At an early hour the members started in motors, under the guidance of Professor Thompson, for

Horham House,

which he described. A tower at its north end is a conspicuous feature, built in the sixteenth century. The house was built of brick at the beginning of that century, but the southern portion is earlier, and was a half-timbered structure subsequently coated with brick. Sir John Cutter was the builder. The hall preserves its original character, and has a screen, old timber ceiling, fireplace, stained glass, and painted ornamental decoration. Near the house are three prehistoric mounds, but lack of time prevented an examination. The next place visited was

Thaxted Church.

It is an important building, the present structure being mainly late Decorated. The earlier building was attached to the priory and convent of Stoke by Clare, and then to a college of canons. The north aisle and porch are Perpendicular, and so is the tower and spire. The chancel was rebuilt about 1500, and a clerestory and new roof were added at the same time. There are north and south chapels attached to the chancel, much old glass of the fourteenth, fifteenth, and sixteenth centuries, and fine font cover, vaulted porches with parvise over them The church is certainly a magnificent building, and seems far too large for the present little town. But time was when Thaxted was a flourishing wool-workers' town. It had several guilds, and still retains its fifteenth-century Guildhall and timber-frame dwellings.

The company then drove to Saffron Walden, where they lunched in the Town Hall, and then journeyed to

Audley End,

the noble mansion of Thomas Lord Audley of Walden, and now belonging to Lord Braybrooke. Although a large portion of the building has been pulled down, it remains a very large and noble mansion. It would require too much space wherein to give a full description. The party enjoyed walking through the hall and noting its fine screen and gallery, good panelling, fireplaces, and plaster ceiling.

Returning to Saffron Walden after tea, the company visited

Saffron Walden Church

which is of unusual interest. It belonged to the Abbey of Walden. It consists of nave with north and south aisles, chancel with north and south chapels and sacrarium, and western tower. The two porches have groined roofs. Below the east end there is a crypt. The Museum was worth visiting, and in the town there are several old half-timbered houses and some remarkable examples of pargetting work.

THURSDAY.

After the annual general meeting the members walked to

King's College.

Professor Hamilton Thompson again acted as cicerone, and gave a history of the college founded by Henry VI, the munificent founder of Eton, which the monarch at one time intended should be closely related to King's, as Winchester was with New College, Oxford. The story of the buildings is somewhat complicated, as the King was hampered by the smallness of the site, but at length he accomplished his purpose, bought up many small properties, and presented the site to the college in 1449. In his will, a very lengthy document, he entrusted the care of the whole work to William of Waynflete, Bishop of Winchester, the founder of Magdalen College, Oxford. The fabric of the chapel was not finished until 1575 owing to the disturbances of the time. The wonderful stained-glass windows were designed by Barnard Flower, the King's glazier, but he died after four windows were made, and was succeeded by "4 English glaziers." It was stipulated that they should represent the story of "the olde Lawe and the newe Lawe after the fourme, maner, goodness, curyousytie and clenliness in every poynt of the glasse wyndowes of the Kynges newe Chapel at Westmynster."

The story of the building of the college is complicated. Much modern work has been done, and some vandalism. James Gibbs built "Fellows' Buildings." The screen and gateway, the Hall, Library, and Provost's Lodge are new, and also the quadrangle near the river from designs by G. F. Bodley.

A tour of various colleges followed, including Clare, Trinity Hall, Trinity College, St. John's. This last was founded by Lady Margaret, Countess of Richmond, mother of Henry VII, in 1518, and is noted for its noble gateway. We hear that the dreaded watch beetle attacked the roof of the library but it did not like it, dropped down to the books, and being of a literary turn of mind devoured the leaves. When the bindings were opened there was nought but dust However, as the works were only those of the Carolean divines, their loss was not deemed an irreparable disaster!

FRIDAY.

On this day a short drive conveyed the members to Sawston Hall, which was visited by the permission of Commander Eyre, R.N. It was described by Dom Bede Camm, O.S.B., F.S.A., who remarked that it was a fine moated manor house, the home of the Huddlestons since the sixteenth century. It was rebuilt in the reign of Queen Mary, as the former house had been burnt down by a Protestant mob because Sir John Huddleston had sheltered the Queen on the death of Edward VI. In gratitude the Queen gave to Sir John the materials of the ruins of Cambridge Castle. There is an ingeniously devised hiding-hole. There are many family portraits, some fine old oak panelling in the long gallery, and some Flemish tapestries.

The next stopping place was

Whittlesford Church,

which has a central Norman tower, but mainly Perpendicular, and consists of chancel with chantry chapel, nave, south aisle and south porch of timber. The south chapel has a small piscina, parclose and rood brackets. The south door has good Early English hinges. There are fragments of alabaster reredos, some carved oak stalls and bench ends. Close to the church is a sixteenth-century guildhall, a token of the former prosperity of the place when the clothiers and wool-men were numerous and the old guild life of the country was flourishing.

In the afternoon a visit was made to

Guilden Morden Church,

which probably derives its first name from the Guild of Our Lady connected with it.

Waterproofed non-cracking concrete roofs for factories are often specified. Where open spaces are not available as playing fields, the most satisfactory alternative is a well-constructed roof garden where indoor workers can enjoy fresh air, rest or exercise. Messrs. Horne Brothers Limited, the well-known men's and boys' complete outfitters (producers of enormous quantities of high-grade bespoke tailoring), have thus found "room at the top" at their well-equipped factory in King Edward Road, Hackney. The above illustration shows the spacious concrete roof (waterproofed and made dustless with "Colemanoid") which is used as a roof garden by the 700 men and women employed at Hackney. The roof area has been embellished with flowers and shrubs. Restful seating accommodation has been provided. Given pleasant weather the roof is a feature that is of real value in congested surroundings.

The smaller illustration shows one of the Horne tailoring workrooms. Write to me at Regent House, Regent Street, London, W.1, for "Dustless Floor Specifications," as applicable to "Colemanoid" roofs. The application of an orthodox concrete topping, usually consisting of a mix of one Portland cement to two of silica sand, frequently acts as floor and roof combined. "Colemanoid" added to the gauging water makes a concrete surface clean and dustless, resistant to wear and tear, and impervious to the penetration of water or moisture.

has many points of interest, a fifteenth-century chancel with original sacristy, a cinquefoil piscina, and a hammer-beam roof. The fourteenth-century wood screen is very fine and perfect, one of the best in the county. It has cinquefoil arches and ornamental quatrefoils with slender banded shafts. The lower panels have fifteenth-century paintings of SS. Edmund and Erkanwold. The rood-loft staircase and doors remain. The columns of the nave are decorated, and under the tower arch is preserved a fifteenth-century parclose screen taken from the east end of the north aisle. The font is Norman, or perhaps Saxon, with cable moulding on the upper edge.

Bassingbourn Church

was well worthy of a visit. It is mainly Decorated, of this style in the chancel with a fine east window and three lofty windows on the south and two on the north. A destroyed fifteenth-century chapel stood on the north, where one window has been blocked up. There is a lofty Decorated chancel arch with fifteenth-century screen, and a font of the same date, as also are the nave pillars which stand on earlier bases.

Wimpole Hall,

erected in 1632 by Thomas Chicheley, was next visited. There is a Chapel with walls decorated by Sir James Thornhill (1675-1734). There is a fine collection of pictures, and here were collected some of the Harleian MSS. Two "cock-fighting chairs" are curious. In the park is an artificial ruin which tells a terrible tale of monstrous vandalism. Lord Chancellor Yorke in 1748 pulled down nearly the whole of the neighbouring church of St. Andrew for the purpose of building this sham ruin! It seems scarcely credible.

SATURDAY.

Half-an-hour's drive conveyed the company to Fenstanton Church. There is some thirteenth century work in the tower, but there was a great rebuilding in the fourteenth century by William de Longthorne, Rector, 1345-1352, and some of the Early English work was used again. The nave arcades belong to the Perpendicular period. "Capability" Brown, who slaughtered so many fine old English gardens, has a monument here.

The party then passed on to a notable mansion called

Buckden Palace,

which belonged to the Bishop of Lincoln, who held the manor at the time of the Domesday Survey. The house was probably built by Bishop Hugh de Wells at the beginning of the thirteenth century, and the famous Bishop Grosseteste erected the great hall. It has had some vicissitudes. A fire raged in 1291. In the fifteenth century there was much rebuilding by the bishops. Leland saw it in the time of Henry VIII and stated that Bishop Thomas Rotherham built the great Tower and restored the Hall, and Bishop Russell the inner and outer gatehouses. In Cromwell's time a large part of the palace was destroyed, but at the Restoration, Bishop Sanderson restored some portions. In the last century further destruction took place, especially in 1871, when the present modern house was built.

In the neighbouring church of Buckden are the monuments of several Bishops of Lincoln. It has a fine fifteenth-century tower and spire and most of the building is of that date. The porch, with its parvise, is the most interesting feature. It is vaulted, and the centred boss has a carving of the Assumption of the Blessed Virgin. A short drive conveyed the company to

Brampton Church,

which has a Decorated chancel and screen and nave and aisles, early fifteenth-century, and fine roofs with tracery panels. There is some rich flowing tracery on the south door. The tower was built in 1635. Samuel Pepys was connected with this village. There is a Pepys farm, which the Diarist owned and where he sometimes stayed, and his sister, Paulina Jackson, was buried in the church and a monumental slab marks her grave. In the Register there are several entries relating to the family.

Little time could be given to the exploring of

Huntingdon,

which has two churches, All Saints' and St. Mary's, both worthy of inspection, and St. John's Hospital, with its twelfth-century hall. The next place to be visited was the noble house of the Earl of Sandwich,

Hinchinbrooke House,

which stands on the site of a Benedictine nunnery. After its dissolution the property was granted to Sir Richard Williams, *alias* Cromwell, who transformed the nunnery into a residence. The gatehouse must have been completed just before the nuns were driven out, and there are other details of Gothic architecture.

The town of St. Ives was not forgotten, as many desired to see its famous bridge, which was built in the fourteenth century. It had a chapel in the centre dedicated to St. Leger, now converted into a dwelling.

Monday was devoted to the study of Ely Cathedral, over which the Dean conducted the party, while Mr. T. D. Atkinson described its architecture. On Tuesday, members proceeded on a tour of the colleges, conducted by Dr. F. J. Allen, Secretary of the Cambridge Antiquarian Society. On Wednesday, Cambridge itself again occupied the attention of the members, and many colleges and places of interest were visited. On Thursday the summer meeting ended with a joint excursion with the Cambridge Antiquarian Society to Lavenham and Long Melford. A long drive of 33 miles conveyed the company to Lavenham Church, which was described by the rector. It is claimed to be one of the finest in the country of late Perpendicular style. It was built by a rich clothier named Spring, aided by John de Vere, thirteenth Earl of Oxford. The chancel is Decorated, and there is a very noble tower, 141 ft. in height. After luncheon the tour was continued, passing by the old moated Elizabethan mansion, Kentwell Hall, to

Long Melford,

a fine Perpendicular building, erected *circa* 1497. It consists of chancel, clerestoried nave of eleven bays, large Lady Chapel, with its unique ambulatory at the east end of the chancel. There are in the building 96 windows, some having fifteenth-century stained glass; niches abound, and around the Clopton chapel runs a painted and carved scroll with a series of inscriptions in verse in Gothic characters. The verses are said to have been written by Lydgate, the poet-monk of Bury St. Edmunds, to which Abbey the manor of Long Melford belonged. There are many interesting monuments in the church, and a double squint. Close to the church is a hospital, founded in 1573 by Sir William Cordell, Speaker of the House of Commons. After tea, in the Rectory garden, a visit was paid to the home of the Rev. Sir W. Hyde-Parker, Bart.

Long Melford Hall,

a fine Elizabethan moated mansion, forming three sides of a quadrangle, having mitred turrets and embayed windows. It was probably built by Sir William Cordell, who entertained Queen Elizabeth here in 1578.

So ended this memorable Summer Meeting of the Institute, which gave great pleasure and instruction to all who were privileged to take part in it. Grateful thanks were expressed to all who had arranged the meeting, especially to the Hon. Secretary of the Institute, Mr. G. D. Hardinge Tyler, and to Mr. E. A. B. Barnard, the Hon. Secretary of the Meeting, who managed everything so well. To mark the appreciation of the members, they presented a handsome silver salver, suitably inscribed, to Mr. Barnard as a token of their regard and gratitude for his zealous labours.

A word of praise is due to the compilers of the admirable detailed Programme of the Meeting. It contains numerous excellent plans of the buildings visited, which were of the greatest service to those who accompanied the expeditions. Professor A. Hamilton Thompson's descriptions of the various churches and mansions were most valuable.

Bewlay's Tobacco Shop in the Strand.

(*See Note on p.* 452.)

THE NEW KELVIN HALL OF INDUSTRIES, GLASGOW

By W. L. SCOTT, M.Inst.C.E.

The new Kelvin Hall of Industries is built upon the site of the former structure, which was destroyed by fire in July, 1925. The Corporation, at the outset, decided that the New Kelvin Hall must be a dignified edifice, fit to take its place in the important group of buildings in the immediate vicinity, and that it must be fireproof and thoroughly equipped. The City Engineer, Mr. Thomas Somers, M.Inst.C.E., was entrusted with the design and supervision of the erection of the new building.

The Argyle Street frontage of the new structure is set back to provide space on an island platform for pedestrians entering and leaving the building, and a carriage drive leads to a covered portico for motorists.

The building is in three distinct portions: (1) the Administrative Block abutting Argyle Street; (2) the Main or Exhibition Hall with its adjuncts, comprising tea room, platform, reception room; and (3) the store block, which includes the electricity sub-station on part of its lower ground floor. The figure on page 474 gives the general plan of the building, and shows clearly the accommodation provided.

The red-sandstone front of the Administrative Block is colonnaded on the ground floor, and for this purpose the Doric order is employed. At each end a massive tower, surmounted by a lead-covered dome and obelisk, rises to a height of 65 ft. A pillared portico occupies the lower part of the centre of the frontage, behind which rises the wall of the conference hall. Two square towers, with vertical treatment to offset the horizontality of the frontage in general, rise to a height of 100 ft. Each tower terminates in a lead-covered lantern which supports a bronze Globe, symbolising the all-embracing and universal purpose of the new building. The lanterns can be illuminated at night. The attic stories of the wings have high-pitched roofs covered with red tiles.

On page 473 is shown the Argyle-street frontage. The treatment of the external walls of the main hall is of a simple yet effective description, obtained by ordered fenestration and the use of bricks of various colours. The design of the doorways of the wide exits with their broad stairways expresses their secondary importance. The difficulties in designing these external walls may be appreciated when it is stated that the floor level of the main hall is 16 ft. lower than one point of Blantyre-street, and 14 ft. above a portion of Bunhouse-road; there is also a fall of 28 ft. in the frontage to Old Dumbarton-road.

Apart from the fact that this new exhibition building is probably the most up-to-date of its kind in existence, it is noteworthy both on account of the size of the main hall and the type of construction employed. The area enclosed by the walls of the main hall is 171,000 sq. ft. and is covered by three roof spans of 110 ft. and one span of 60 ft. The lengths normal to the spans are 458 ft. and 331 ft. respectively. For comparison it may be stated that the exhibition space of Olympia, including the new hall but excluding the gallery, is 212,380 ft. sq. The area of the Agricultural Hall, Islington, including the annexe and arcade, but excluding the gallery, is 128,300 sq. ft. One of the main objects which had to be kept in view when designing the roof of the main hall was to have few pillars, and these as small in sectional area as possible compatible with strength. In this vast area, there are only twenty-two isolated columns; these are of reinforced concrete, octagonal in section, 24 in. in diameter.

On page 473 is shown the interior of the main hall. The main roof, supporting columns and foundations, together with the skeleton framework, floors and roofs of the tea room, stores building, etc., are of reinforced concrete, the consulting engineers for which were Messrs. Considère Constructions, Limited, of Westminster. The whole of the reinforced concrete work in the main hall is entirely detached from the surrounding work.

The size of the various reinforced concrete members forming the roof trusses, valley beams, etc., have been kept down to the minimum consistent with safety. The entire structure of the main hall, including the external columns, gable ends, etc., is equivalent to a slab laid over the floor 8½ in. thick. This thickness does not include the external walling or foundations, the latter of course depending upon the nature of material upon which they bear. This thickness of 8½ in. is exceptionally small having regard to the height of the roof, the distance from the floor to the intrados of the centre arched span being 52 ft. Moreover, the superload specified and allowed for is equivalent to a crowd of 50,000 adults standing on the roof at the same time.

In addition, the calculation of stresses in the various parts of the work had to comply with the regulations and requirements of the Dean of Guild Court. This authority, under the technical direction of the Master of Works and City Engineer, acts in a similar capacity to the Building Department of the L.C.C., and the regulations imposed by it, although not so exacting in detail as is the case with the existing L.C.C. Regulations, are sufficiently so to ensure adequate protection of the public interests it represents.

On page 475 is shown a cross section of the main hall, illustrating the type of roof employed. Each span comprises a number of arch vault slabs and glazing. The columns are arranged in the longitudinal direction at every third truss, i.e., at 55-ft. centres. The maximum calculated load coming upon each of the main internal columns is 406 tons, while the actual load realised from the dead weight carried is 296 tons.

The foundations of these main columns at 55-ft. centres required special care and treatment. The foundations along Blantyre-street rest on natural stone formation. The foundation of the other pillars had to be taken down to a low level for security, as the stone rapidly gives place to forced material which, along the Bunhouse-road frontage, reaches to a considerable depth.

The main roof trusses are composed of arch ribs, ties, and vertical hangers or suspenders. The ribs are true arch members, the thrust being taken by the ties connecting the springings. In designing these members, several important points arose. First, it was necessary carefully to consider the stresses resulting from what are usually known as "secondary effects." In spans of this size, however, these effects are certainly of first importance. These trusses are bowstring girders in the proper sense, the elastic extension of the "string" or tie inducing deformation of the "bow" or arch rib. There is further deformation of the arch rib caused by its elastic shortening when compressed, and also due to the shrinkage of the concrete during hardening. All these effects are cumulative, and the stresses they produce are permanent throughout the life of the structure. They are therefore of vital importance in the design of such work.

There is no difficulty as regards the vertical loading to be carried, since the superload can reasonably be assumed to be evenly distributed and the axis of the arch therefore made to coincide exactly with the line of pressure due to vertical loading. This was done in the case of this roof, and the curve of the soffit, although not of the usual kind, is not noticeable, owing to the elimination of the underside of the transverse projecting members.

The second point of importance in such construction is the connection of the arch ribs and ties and columns at springing level. Over a relatively small area of material the entire horizontal component of the thrust from a rib, amounting in this case to about 86 tons, has to be transmitted to the tie, while the vertical component of the thrust must be brought on to the columns without any eccentricity, which, if permitted, would have the effect of introducing intense and unknown stresses at the heads of the columns.

The tension in the ties is considered to be taken wholly by the steel reinforcement. This, however, does not mean that the concrete embedding this reinforcement acts only as a protective cover. On the contrary, without the concrete the tie could not function, since it was not possible practically to procure rods of sufficient length to span from end to end without a break.

With a tension member of such a relatively small cross section (9 in. by 13½ in.) containing many rods of larger diameter, the old method of lapping the rods and terminating them with hooks is not practicable or even desirable technically. Instead, a system of butt joints for the reinforcement has been arranged in such a way that at any cross section the requisite efficient sectional area of steel is present to keep the tensile stress in the member within the prescribed limits. The main spans of 110 ft. are believed to be the largest of their type yet attempted.

Special care is required during construction to obviate any undue distortion of the curved vault slab, which might result in unsightly, although non-structural, hair cracks appearing. It is obviously impracticable to release the whole of the staging simultaneously, and in carrying this out piecemeal certain roof trusses are in their final condition, *i.e.*, deformed under load whilst others remain propped, causing longitudinal bending in the concrete construction between the trusses in question.

In designing the external wall columns allowance had to be made for the lateral movements taking place at their heads as a result of the roof ties extending under stress. To facilitate the contractor's operations, the centre 110 ft. span was omitted until the spans on each side were concreted. The total continuous length of the tie beams is 390 ft., and when subjected to the calculated maximum stress the possible lateral displacement at their ends was estimated to be about 1.2 in. The external columns were therefore designed to accommodate such a movement, although in fact such a displacement was not realised owing to the absence of the presumed superimposed loading. Also, of course, the rigidity of the intermediate supporting columns tends to lessen the calculated movement. In addition to the arrangement made for transverse movement, provision has also been made for expansion and contraction in the longitudinal direction of the roof. As a result of these precautions no cracks of any kind have occurred in any part of this very large area of roof, which is further proof of the suitability of reinforced concrete for work of this nature. The maintenance costs of the hall will be negligible, while the initial cost of the work compares favourably with any other form of construction.

The mixture of concrete used was 1 : 1½ : 3 for the whole of the reinforced concrete work, except the interior octagonal columns which were constructed with a richer mix. Upon the completion of concreting and the removal of the staging and shuttering, the interior visible concrete surfaces were rubbed down and washed with a mixture of white cement and cream-coloured sand. The effect of this is to make the surfaces even in texture and pleasing in colour. No rendering in the form of plaster was permitted.

Three cupolas, 40 ft. wide and extending practically the whole length of the Hall, together with a fourth cupola over the 60 ft. span, give a remarkably uniform distribution of daylight over the whole area. Adequate means of natural ventilation is provided by the opening sidelights of these cupolas, the dormer windows in the centre 110-ft. span and the windows in the external walls. I

The New Kelvin Hall, Glasgow: Main Elevation.

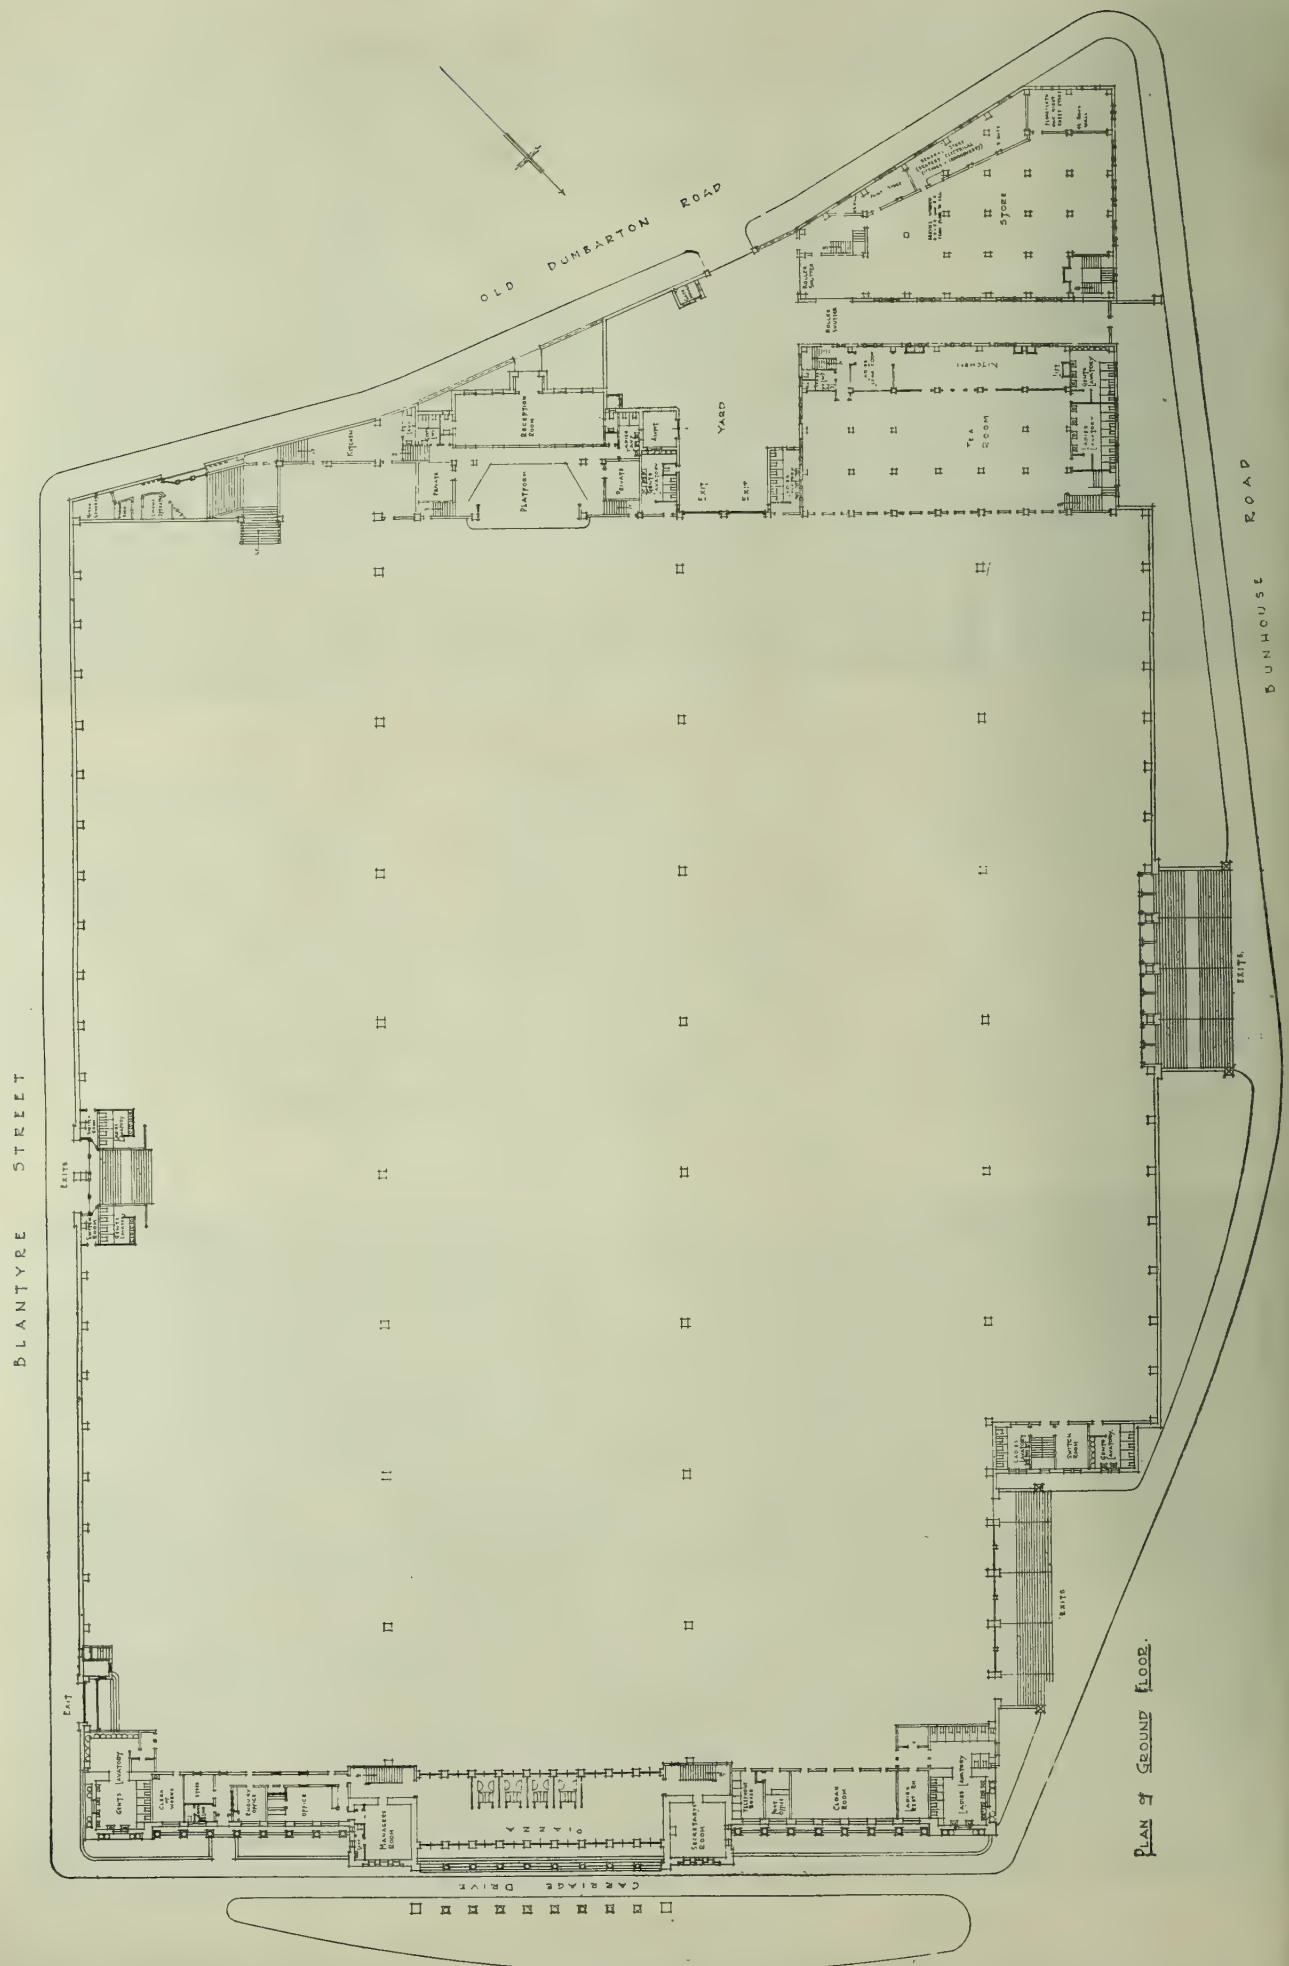
tion, the fans which form part of the ng batteries can be employed to cool the osphere. The concrete roof is covered natural rock asphalt. The floors are of rete with a covering of natural rock alt for two-thirds of the area and tar adam for the remaining third.

he Corporation, in their endeavour to make hall as up-to-date as possible, have pro- d all the services it is anticipated will be ired by stallholders. An ample number utlets connected to the drainage system placed in the floor to give facilities for ng away waste water. The other services supported along the external walls and ey beams, where connections can easily be e to the gas and water pipes and the elec- l installation. The heating is by steam.

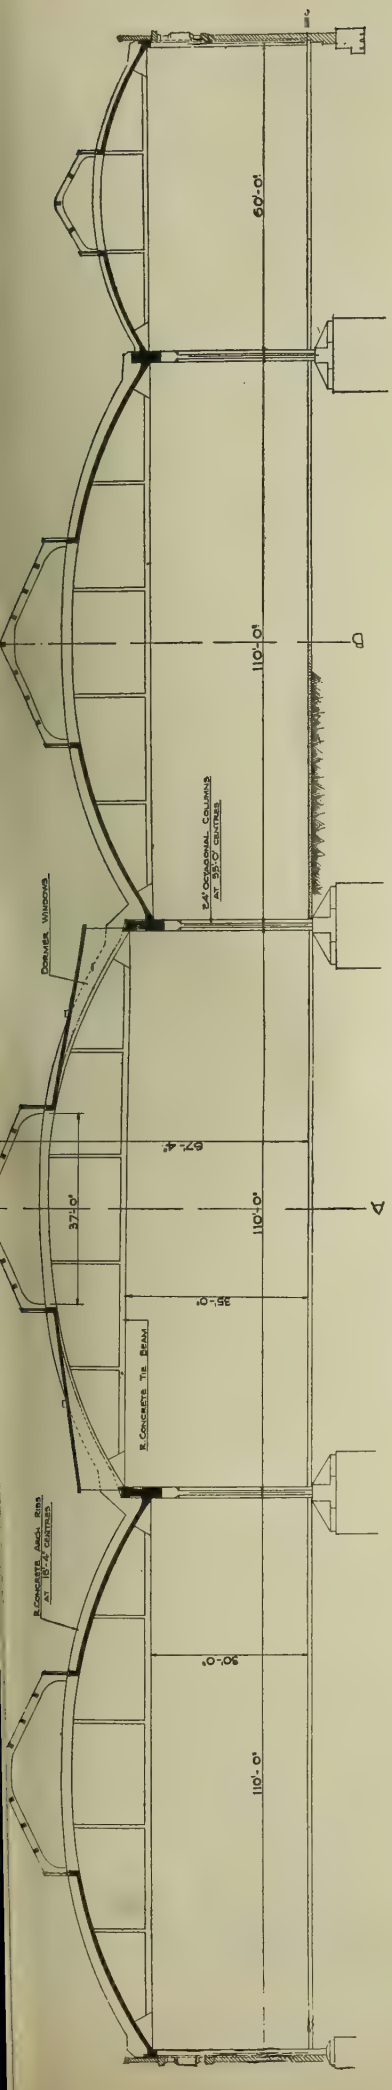
The public gain access to the Exhibitors' Hall from the piazza, which is 90 ft. long by 25 ft. wide, and egress to Blantyre-street, Old Dumbarton-road, and Bunhouse-road.

The building was commenced in March, 1926, and opened by H.M. the King on July 12, 1927. This period of construction included the general strike of last year, and other local industrial disturbances, all of which tended to delay the progress of the work.

The general contractors were Messrs. John Train and Co., Ltd.; Messrs. Edmiston Brown and Co., Ltd., were the contractors for the electrical installation and automatic telephone system; Messrs. Jas. Combe and Son, Ltd., for the heating work; Associated Fire Alarms, Ltd., for the automatic fire-alarm system; and Messrs. Doulton and Co., Ltd., for the sanitary fittings.



The National Gallery Trustees.



The Lords Commissioners of the Treasury have appointed Mr. Evan Charteris, K.C., Mr. Samuel Courtauld, Sir William Burrell, Mr. Glyn Philpot, R.A., Mr. Walter Westley, Russell, R.A., Mr. Henry Poole, A.R.A., and Professor William Rothenstein to be additional Trustees to the National Gallery of British Art. These appointments are in the place of Mr. D. S. MacColl, Lord Henry Cavendish-Bentinck, M.P., Mr. J. R. Holliday, Sir Aston Webb, R.A., Sir D. Y. Cameron, R.A., Mr. Charles Sims, R.A., and Mr. Muirhead Bone, whose term of office has expired.

COMPETITION OF INDUSTRIAL DESIGNS, 1927

The Royal Society of Arts Annual Competition of Industrial Designs was held for the fourth time this year. We take the following extracts from the judges' report. In certain sections it is gratifying to note that the judges report a very marked advance as compared with the work submitted at previous competitions. The prize-winning designs for wrought iron gates were excellent, both in conception and execution. The designs for tapestry and moquette piece goods, for cretonnes, for printed and woven dress goods and printed furnishings included much admirable work, whilst in the Book Production Section, which has hitherto been poor, there were many excellent specimens of printing. In the Pottery and Glass Section the number of entries jumped up to 318, as compared with 94 last year, and the quality of the pottery designs has increased as remarkably as the quantity. A great many of these candidates come from the junior departments of art schools in the pottery districts, and it is satisfactory to find that so much young talent is being trained in these quarters. The general average of the posters is also considerably higher than that of the preceding competitions. On the other hand it must be admitted that in one or two sections the work is disappointing. In the designs for furniture there was a general lack of originality and of proper appreciation of the principles of furniture construction, while the designs for decorative architecture were poor, as were most of those for silk fabrics and carpets. This year, for the first time, a prize was offered for topographical drawings, and this drew some excellent entries.

A large number of the prizes offered this year were provided by firms for designs for special objects. These and the general prize funds have been provided by the generosity of those whose names are printed as an appendix to the report.

Firms and individuals are invited to offer prizes for the competition of 1928. The prize-winning designs become the property of the firms. It will be noticed at the exhibition that in one or two cases these designs have been removed, as the owners are anxious to get them on to the market as soon as possible. No doubt the exhibition loses a little by the absence of this work, but on the other hand the anxiety on the part of the owners to secure the designs at once is proof of the practical value of the competition both to manufacturers in search of designs and to designers in search of employment.

It has been the practice at the conclusion of the exhibition in London to send sections of the work to centres likely to be specially interested in them. Thus the pottery designs have been exhibited in the Potteries; in 1925 the textiles designs were shown at Manchester, and last year at Leeds. Considerable interest was roused in these centres in this way, and as a direct result of the Leeds exhibition three or four young designers secured good permanent appointments with well-known firms.

For the benefit of those whose work is approved by the judges for exhibition, a Bureau of Information has been opened where their names can be enrolled if they desire to obtain employment as designers. The information is placed at the disposal of manufacturers, and it is hoped that the Bureau will be of service both to manufacturers and designers.

The total number of competitors who entered for the various sections of the Competition was 745. Of these, 571 were students of Schools of Art, and 174 non-students. The number of designs submitted was 2,224, divided as follows—Architectural decoration, 224; textiles, 487; furniture, 101; book production, 220; pottery and glass, 318; miscellaneous, Messrs. Cadbury Brothers, Ltd., 51; Messrs. Bryant and May, Ltd., 202; Messrs. J. S. Fry and Sons, Ltd., 236; Messrs. Fryer and Co. (Nelson), Ltd., 91; Messrs. Henley's Tyre and Rubber Co., Ltd., 123; Messrs. Rowntree and Co., Ltd., 11; Underground Group of Companies, 132; Messrs. Hugon and Co., Ltd., 28. Total, 2,224.

Mason & Son, fittings; Sadgrove & Co., furniture; J. M. Piric & Co., bronze name plates, etc.; Edison Swan Electric Co., electric light fittings.

Mr. Michael Waterhouse, A.R.I.B.A., is the architect.

Insurance Office, Ltd., 60, Charing Cross.

With reference to the article on page 320 of our issue for August 26 concerning this work, we are asked to point out that the style of the general contractors is "Turnbull & Son" (not "Turnbulls, Ltd."); and that Mr. A. S. Lambert was the general foreman employed by this firm, from whom he took his directions as to the manner in which the contract should be carried out.

Cottages at Ranksborough, Rutland.

These cottages are built of common bricks whitewashed, and stand on the edge of a meadow away from the road. The roofs were intended to be covered with red pantiles, but have actually been covered with old Swithland slates, an opportunity for the purchase of these having arisen during the progress of the works.

Mr. H. S. Goodhart-Rendel, F.R.I.B.A., is the architect.

Rampton State Institution: Pavilion Block for Patients.

The Rampton Institution is intended to deal with the care and treatment of mentally defective persons. These are for the most part housed in ward blocks. The intention, however, now is to erect a certain number of pavilions in which patients of a certain type may live under conditions which partake more of the domestic and less of the institutional character, and several pavilions are being erected of this type. The illustration shows a design prepared for a pavilion to house 35 patients. The walling is to be faced with rustic bricks of a dull red colour, the roof to be covered with hand-made tiles. The windows to be cased sashes painted white. The utmost simplicity has been observed both for economical reasons and to obtain a restful effect.

Mr. John H. Markham, F.R.I.B.A. (H.M. Office of Works), is the architect.

New Building in Vandon-street, Westminster.

This drawing represents the elevation to Vandon-street of a new building shortly to be erected for the United Women's Homes Association, Ltd. The building is to be the headquarters of this Association, with offices, etc., on the lower floors; the upper three floors are arranged for small flats and cubicles to accommodate women at economical rents. The exterior is to be faced with multi-coloured bricks and dressings.

Messrs. Searle & Searle, of Paternoster House, E.C. 4, are the architects.

A Sports Pavilion.

We illustrate this week a design for a Sports Pavilion and Centre (an R.I.B.A. Final Examination Subject in Design) by Mr. Herbert K. Ablett.

New Premises, Leicester Square.

The elevations of these premises, for Messrs. Stagg and Russell, Ltd., were largely remodelled some time ago. The drawing which we reproduce shows the revised elevations, including the new shop fronts, which are now being put in. Messrs. Whinney, Son and Austen Hall are the architects.

The Gresham Hotel.

In connection with this building, illustrated in our last issue, we are asked to state that the heating of the hotel is on the panel system, "whereby the walls are heated." All the panels are in the ceiling, even where the ceilings are curved.

THE LONDON BUILDING ACTS AND THEIR APPLICATION—XXVIII

By H. V. MILNES EMERSON, A.R.I.B.A.

District Surveyors' Fees (Continued).

In addition to the foregoing fees payable to the District Surveyor, he is entitled to fees in connection with some of the by-laws, as follows :—

The District Surveyor shall in respect of the erection of any house or other building be entitled to receive the sum of 6s. 3d., the same to be taken and deemed to be a fee due to such District Surveyor in respect of the duties imposed upon him by the Metropolis Management and Building Acts Amendment Act, 1878, and these by-laws, such fees to be payable in the manner and at the time prescribed by Section 51 of the Metropolitan Building Act, 1855. The District Surveyor shall also in every case where in respect of any breach of these by-laws, or of the above Act of Parliament, an application shall have been made by him to a justice, etc., shall be entited to a fee of 12s. 6d. in addition to the fee of 6s. 3d.

There shall be paid to the District Surveyor in respect of his supervision of any building constructed wholly or in part with concrete walls, a fee of one-half more in amount than the fee to which he would be entitled under the Metropolitan Building Act, 1855, for a new building or addition. No additional fee is, however, to be charged in respect of any alteration to a concrete building.

There shall be paid to the District Surveyor in respect of his supervision of the plastering of any house, building, or other erection, and in respect of the filling in of any excavation made outside the site of any house, building, or other erection, and within a distance of 3 ft. therefrom, an inclusive fee of 6s. 3d., such fee to be payable in the manner and at the time specified in Section 51 of the Metropolitan Building Act, 1855.

Note.—Section 164 of the Act of 1894 gives power to make by-laws, and the by-laws under the Metropolitan Building Act, 1855, etc., were continued under the present Act. The present fees payable under these by-laws are 6s. 3d. in relation to each house or other building with an extra 50 per cent. if the walls are of concrete. A further 6s. 3d. has to be paid if plastering is used, or excavations are made within 3 ft. of the walls of the building, such fee covering one or both of these operations. These fees must be paid at the time set forth in Section 157.

Under the London Building Acts (Amendment) Act, 1905, further fees are payable to the District Surveyor, as follows :—

Section 18, Subsection 3, provides that where any works or services other than those carried out or performed in pursuance of this Act are carried out or performed in respect of any building the said fees shall be in addition to and not in substitution for any fees which may be payable under the Act of 1894 in respect of such other works or services as aforesaid.

One-fifth of the amount of the fee payable under the Act of 1894 in respect of a new building of the same character or the sum of one guinea whichever shall be the greater is to be paid to the District Surveyor for the following :—

In respect of a building erected in conformity with the provisions of Section 7, "Protection against fire in certain new buildings," or Section 9, "Protection against fire in certain existing buildings," or Section 10, "Projecting Shops," and Section 12, "Means of access to roof," a fee of 9s. 5d. is to be paid to the District Surveyor if he surveys for the purpose of ascertaining and notifying or reporting any building to the Council pursuant to the provisions of Section 16, "Duties of District Surveyors under Act," and Section 17, "District Surveyors to notify Council in certain cases."

Under the London County Council (General Powers) Act, 1909, which deals with reinforced concrete and steel-framed buildings, the District Surveyor is entitled to charge a fee of 2½ times the amount of the fee specified with regard to new buildings under the 1894 Act, for any building, addition, or alteration or other work to or on any building under the 1909 Act.

Under the London County Council (General Powers) Act, 1921, Part V, provision was made to increase the fees of the District Surveyors as set forth. It was recognised, however, that in making this increase the fees on small alterations would probably be out of proportion to the cost of the work, and the following clause and scale of fees for this class of work was introduced :—

Section 26, Subsection 4.—In any case in which during the period commencing on October 1, 1921, and ending 1926 (now extended to December 31, 1928), a building notice has been duly served on the District Surveyor as required by Section 145 of the 1894 Act, and satisfactory evidence of the cost of an addition, alteration, or other work made or done to or on any building has been produced to the District Surveyor within fourteen days after completion of such addition, alteration, or work, no fee payable under Part I of the third schedule of the 1894 Act with respect to this work, together with the increase or increases of such fees made by or under the provisions of this section and for the time being in force shall exceed the appropriate fee prescribed in the following scale :—

For every additional alteration or other work the cost of which does not exceed	Fee. £	s.	d.
£25	1	1	0
50	2	2	0
75	3	3	0
100	4	4	0
200	5	5	0
300	6	6	0
400	7	7	0
500	8	8	0

Under this Section, if the fees provided in the 1894 Act, together with such increases at present in force, for any of the prescribed work, should exceed this scale, then the amount set forth in the scale can only be charged, but should the amount be less than the scale, then the lesser amount can only be claimed.

The present District Surveyors' fees will remain in force until December 31, 1928, after which date it is anticipated that a revised scale will be brought into operation, which will materially reduce the fees payable upon small alterations, but will be increased upon certain new buildings. It is proposed to base the fees upon the cubical contents of the buildings instead of the present payment upon area plus stories.

Sections 158 to 162 (1894 Act).—These Sections deal with returns, etc., to be made to the Council by the District Surveyor.

Section 163.—District Surveyor to notify to the Council any actual or probable contravention of this Act.

Mr. A. R. Sage's Estate.

Mr. Arthur Reginald Sage, M.B.E., of Brookside, Beverley-road, Barnes, S.W., principal of the London County Council School of Building, Brixton, left £1,521 (net personalty £1,198) (so far as can at present be ascertained).

BOOK REVIEWS

The Design of Small Properties. By M. E Bottomley, M.L.D., Landscape Architect (New York : The Macmillan Company. 233 pp. Cloth. 12s. 6d. net.

The author writes for American small property builders and owners, but his book should appeal equally to garden lovers on either side of the Atlantic. In America, front and back gardens are front and back "yards"; but if on this side we persist in calling them gardens, the problem is just the same for the "Home Owner in City and Country"; and the problem is that of making the best use of a small plot of land. As he says in the introduction; "The aim of this book is to encourage and direct the creative impulse of the person who is interested in his own out of doors," and, in short, that landscape architects cannot afford to undertake this type of work where the total expenditure amounts to only a few hundred dollars, and the mere "landscape gardener," whose main business generally is the rearing and selling of plants, is rarely proficient as a designer. Some of us have suffered at the hands of the landscape gardener, and many have come to the conclusion that we could have done much better ourselves, but for the lack of a few common sense hints in garden planning economy. The author gives us 6 lucid diagrams to scale of the planning and planting of city "back yards" and suburban "back and front yards" of various sizes (some as small as 30 ft. by 50 ft.), and the more pretentious "country homes" and "farm homes" running almost into acreage areas. Due consideration is given not only to size but to shape, and even the difficult problems arising in corner or triangular plots. The text is full of suggestion and very much to the point not only in the actual laying-out of the garden as a recreation ground but as to the best position for the house, where the now ubiquitous garage should be placed for perfect convenience, where the "service area" and even where the "coal window." We suggest that the author's success in this book lies in the emphasis he places on the fact that a city back yard or suburban building plot cannot—and should not, even if it could—be made to look like a thousand acre park but with due reticence and a studied avoidance of overcrowding, both in design and planting, the smallest home plot may be made to be full of delightful surprises.

Everyday Life in the Old Stone Age. Written and Illustrated by Marjorie and C. H. B. Quennell. (B. T. Batsford Ltd.) 8vo. Cloth, 5s net.

It is largely with the help of the many flint and fewer bone implements that archæologists are able to reconstruct, from the occasional skull or jawbone, the paleolithic or neolithic man as he actually was, or may very well have been. And this is what Mr and Mrs Quennell do for us in this delightful book on everyday life in the Old Stone Age. It is always a pleasure to read one of these authors' books written for children of all ages. The authors seem to possess that very rare capacity for talking in just the right strain to the young person of any age. The student well versed in geological lore was nothing better than careful drawings of a few old battered bones and flint implements. But if we want to arrive at the real human element in our ancient progenitors, we could scarcely wish for better guides. Their drawings, in the nature of such things, are often of necessity, highly fanciful; but we feel at the time that they are highly probable. In a series of clever drawings we get the stone age, men with their women and children chipping their flints, scraping their bones, cooking their meals, and paddling their boats on fishing expeditions.

We welcome this new edition of a work which deals in known and proven facts from which the writers build up a feasible picture of life in the days when this old world of ours was very young.

RCHITECTS' & BUILDERS' INQUIRY BUREAU

e are glad to give questions and answers, but cannot ept responsibility for contributed replies, especially on al matters.

ay we appeal to our correspondents to submit their ries on paper of a size easily filed, and written as bly as possible, or, better still, in typewriting?—Ed.

Local Authority and Strip of Freehold Frontage.

[Reply to "K. P. D.," September 9.]

Sir,—Under the Public Health Act, 1925 n Act which amends the Public Health cts, 1875 to 1907), Section 33 gives power a local authority to prescribe an improve- ent line for widening streets; and subject the consideration of any objections made ereto, can, by resolution, prescribe such provement line for all time, and no new ilding, erection, or excavation can then be aced or made nearer to the centre line of e street than the improvement line so pre- ribed, except with the consent of the local thority. Any person whose property is in- riously affected is entitled to compensation om the local authority, and the amount of e compensation payable in default of agree- ent is determined by arbitration under the ovisions of the Acquisition of Land (Assess- ent of Compensation) Act, 1919.

The local authority may purchase any land t occupied by buildings lying between the provement line and the boundary of the reet, and the provisions of the Lands Clauses cts including the provision with respect to e purchase and taking of lands otherwise an by agreement (except Sections 92 and 3 of the Lands Clauses Consolidation Act, 45) extend to such land which, if pur- ased, is added to the street. In assessing mpensation, any "betterment" accruing the owner whose land is taken is set off gainst the compensation. Any compensa- on payable by the local authority is recover- le summarily as a civil debt.

If the provisions of the above Act of 1925 ve not been adopted by the local authority, en under Section 160 of the Public Health ct, 1875, the provisions of Section 67 of the owns Improvement Clauses Act, 1847, are corporated, and thereunder the local autho- ty may purchase land for widening streets; so under Section 154 of the Act of 1875 the cal authority (or an urban authority or a ral authority having like powers) may pur- ase land for widening streets.

In general, compensation for land acquired r public purposes is determined under the cquisition of Land Act, 1919, before men- oned, the compensation being assessed by n official arbitrator appointed under the Act.

Law.

Road Subsidence: Ownership of Drain.

[Reply to "Surveyors," September 9.]

Sir,—The length of drain referred to is ndoubtedly the qualified property of the vner of the premises which it drains, subject the control of the local authority. He is at l times liable for any defects in it and for ny subsidence of the roadway caused ereby or for any bad filling-in of the ench over. No liability attaches to the cal authority, unless it can be shown that e subsidence is due to something they emselves have in fact done. The local thority is not liable for non-feasance, such neglect to repair. The inquirers can any time apply to the local authority open up the road and pay their fees, under eir regulations for so doing. Then the ain could be examined and the cause of the bsidence ascertained. If the subsidence is e to the drain being faulty, then the local thority is entitled to recover the cost of pairing and restoring the roadway to make equally commodious to the public as it was fore the subsidence took place.

Alternatively, it is open for the local thority to serve a notice on the owners to ke good the defects, and if it is not com- ed with, the authority can itself do the rk and charge the owners with the cost. But in both cases, if the drain is not found to be defective, nor the filling-in, the cost cost would be borne by the local authority itself.

Law.

Sir,—The question seems to be which occurred first—the subsidence or the fractured drain? It is quite possible for a faulty drain to cause cavities in the soil, which eventually lead to settlement. I had a case myself a few years ago in which a subsidence in a school playground was traced to the existence of an old brick drain, and the cavity formed round it needed to be seen to be believed. The question as to whether it was possible for the owner to discover in advance the state of the drain or not, does not arise. Such hard consequences are the penalty of ownership, and the burden remains, however hard. I should say that if the subsidence is confined to your correspondent's frontage and is of a size consistent with drain leakage, he will have to foot the bill; but if there is a general subsidence not confined to one property and likely to be from causes other than faulty private drains it is a matter for the Public Authority to make good.

Sympathy.

Floor Surface for Printing Works.

Sir,—What is the best floor surface for a printing works? It must be dustless and laid upon cement concrete foundation. Cost is a consideration.

New Building.

Growth in Lime.

Sir,—Can you inform me what can be added to lime to prevent growth of vegetation in same after a few months? My customer mixes a quantity of linseed oil with the lime and removes any growth before starting the work, but in time the growth always comes through. I refer to lime applied to the exterior of houses, sheds, etc.

O. P. Q.

Cornice, Wall and Ceiling.

[Reply to "W.D.J.," September 16.]

Sir,—As a general rule, a plaster cornice is treated in with the ceiling for decorative purposes. A wooden cornice crowning wall panelling of the same material would be treated as the crowning member of the wall and treated in with its decorative finish. The matter is really one of personal taste, each case to be judged on its merits.

Architect.

Elm Weather Boarding.

[Reply to "Amateur," September 16.]

Sir,—Elm is one of the few timbers that shrink in its length as well as width, and where vertical joints have to be provided, i.e., butt joints, it is well to put a sheet of zinc under, overlapping the board below. But, if possible, avoid the vertical joint altogether.

Shrinkage.

Colouring Grey Stone Floor.

[Reply to "Readers," September 16.]

Sir,—My advice to those about to achieve this crime is similar to Punch's advice on another matter—Don't. If this is not satisfactory, I should say take up the stone flags and sell them to somebody who appreciates them, and put down a composition floor as red and as ugly as you like.

Sorry.

French Cement.

Sir,—Have any of your correspondents used French cement of good quality? If so, has it been found satisfactory for ordinary building purposes, viz., for foundations and rendering?

Cheap.

Building Lines.

[Reply to "Curious," September 16.]

Sir,—A local authority may have power, under a local Act, to prescribe the line in which any house to be thereafter built or taken down for the purpose of being rebuilt or altered should be erected; on payment of compensation to the owner of any house required to be set back. Also under Section 155 of the Public Health Act, 1875, an urban authority, or one having like powers, has power to regulate this line of buildings when any house or building, situated in any street, or the front thereof, has been taken down in order to be rebuilt or altered; the authority paying or tendering compensation to the owner for any loss or damage sustained.

If and where the provisions of the Public Health Act, 1925, have been adopted, under Section 31 thereof, the local authority has power in certain cases on an application to approve plans, as, for instance, in the case of a main thoroughfare, or continuation of a main thoroughfare, or continuation of a main approach, or means of communication between main approaches, to determine the width of a new street, paying compensation should certain events happen. Also under Section 33 of the Act, the local authority may prescribe an improvement line for widening any street repairable by the inhabitants at large, or when it is necessary or desirable that such street shall be widened; and, subject to the hearing of any objection thereto, when the improvement line has been prescribed, no building erection or excavation can, without consent, be placed nearer to the centre of the street than the improvement line. Any person whose property is injuriously affected is entitled to compensation. Also under Section 35 of the Act, the authority has power to vary width of carriageway and footway, on making up a private street, either under Section 150 of the Act of 1875, or under the Private Street Works Act, 1892, as the case may be.

Law.

Overhanging Barge Boards.

[Reply to "Foggy," September 16.]

Sir,—If a wall is built on the boundary of two adjoining properties, so that the centre thereof coincides with the boundary line, the property in the wall follows the property in the land upon which it stands, if and when the quantity of the land contributed by each of the adjoining owners is known, and there is no transfer of the property from and to the other; but both remain owners of their respective lands and portions of the wall and each has the ordinary remedies if any injury be done to his portion of the wall.

If, however, the amount of land contributed by each owner is not known, and the circumstances in which the wall was built are also unknown, then the adjoining owners are regarded as tenants in common of the wall.

Under Section 38 of the Law of Property Act, 1925, by a disposition or other arrangement made after 1925, which would have created a tenancy in common in a party wall or structure, such structure shall be and remain severed vertically as between the respective owners, and the owner of each part has such rights to support and use over the rest of the structure as may be requisite for conferring rights corresponding to those which would have subsisted, if a valid tenancy in common had been created.

"Foggy" must have in his mind the provisions of the London Building Act, 1894. It sets up an elaborate code of provisions as to the rights of building owners and adjoining owners, and all proper steps, such as coping the wall, must be taken by the building owner to safeguard the adjoining land and building, and not cause any unnecessary inconvenience. It is quite possible the carrying over of the roof and barge board may effectually do this; but this statute applies to the Metropolis Act.

Law.

Engineer's Estate.

Mr. Arthur Henry Haigh, B.Sc., M.Inst. C.E., of Upper Richmond-road, East Sheen, left £2,161 (net personalty £2,132).

THE BUILDING TRADE

IS "CUBE" A RELIABLE FACTOR?

By CLEMENT FROST.

The provisional estimate is one of the greatest trials of the architect's life. If he is a pessimist and arrives at a figure which would ultimately be found to lie mid-way between the highest and the lowest tender the client will at once become alarmed, whilst if he looks on the bright side of life—and hopes to get a low estimate—when the prices come in he is open to the charge of misleading the layman. In either case he is in difficulty.

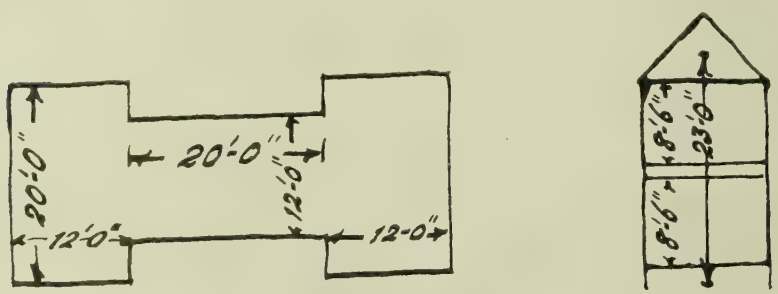

FIG 1.

No doubt the members of the Practice Committee of the R.I.B.A. were actuated by a desire to obtain some reliable figures when they adopted the scheme of circularising members on the subject of methods of "cubing" and the costs of various types of building per "foot cube." The forms issued seem complete in every way, and if we all work out the figures from tenders received in the past three years and fill up the forms both in the spirit and letter as sent to us, a veritable mass of data will be available.

All this is very well if, when once we have set up a recognised standard of measurement and ascertained the various factors, we can produce provisional estimates which are fairly near the mark. There is a grave doubt, however, as to whether this cost per foot cube can in any way be relied upon, and it would seem that the very fact of having such figures at our disposal would tend to make the pricing of our sketch schemes even more inaccurate.

Take the case of the H-shaped cottage shown in outline (Fig. 1). Here the span is twelve feet throughout and the floor area 3/20 by 12 multiplied by the assumed height of 23 feet gives us a cube of 16560. Priced at a shilling—an assumed figure—this cottage would cost £828. In the case of a rectangular building of the same floor area (Fig. 2), however, the cube would be considerably greater, for here, on the same basis, there is an additional three feet in height, and the figures would cost no more than the polygon in spite of the extra expense due to the greater span of the roof.

Again, the higher the factor used for the cube the greater the difference in price according to span. If our two examples are each priced at 1s. 6d. the difference becomes £162 and so on. Assuming, for a moment, that cubing is right in principle, cost becomes merely a matter of span, and we must either admit that shapes such as Fig. 3 are cheaper to construct than rectangles or else apply different multipliers for every shape—such as 1s. for rectangular, 1s. 0½d. for L-shaped, 1s. 1d. for H-shaped plans; when the whole business would become very complicated.

In the queries sent out by the R.I.B.A. cube is cube—simply that and nothing more. If, however, cube as a factor is fundamentally unsound, then the whole of the work is wasted and the findings misleading. Many people are of the opinion that—in cottage work at any rate—floor area is a better basis on which to price than cube, and the first two examples would appear to bear this out.

It would seem that before asking us to fill in all these facts and figures as regards "cube" the R.I.B.A. might have broadcast the question both to members and also builders—who, after all, finally settle the contract prices—"Is Cube a Reliable Factor?"

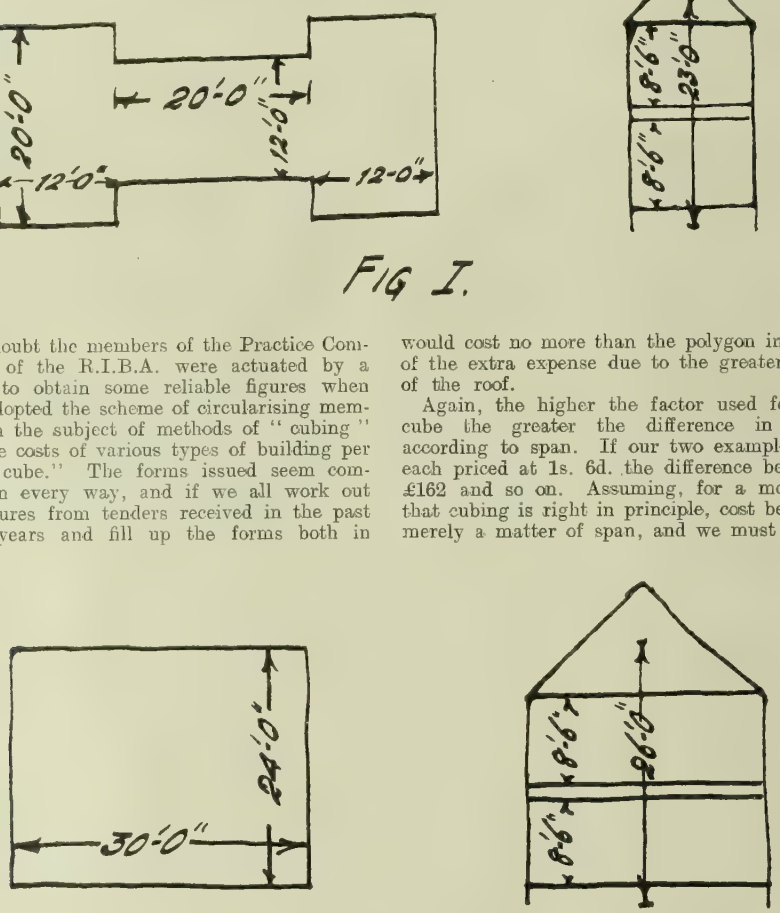

FIG 2.

FIG 3.

THE CUBING OF BUILDINGS

We take the following from the current issue of the R.I.B.A. Journal:—

It will be remembered that on account of the wide divergences in the system at present employed by architects for the cubing of buildings, the Practice Standing Committee decided to draw up standard methods of measurement for the guidance of members of the Institute.

In addition to the general advantages to be gained from the cubing of buildings by standard methods, their application would—

(1) Simplify the comparison of approximate estimates of cost; and

(2) Ensure that the cubic contents of buildings submitted in architectural competitions were all calculated on the same basis.

In order that the Committee should receive as much assistance as possible in the pursuance of its purpose, members of the Institute were requested in May, 1926, to fill in and return to the Secretary the following two forms:—

(a) A Questionnaire; and
(b) A Schedule.

While the Committee regret that so small a proportion of members furnished the information asked for, they acknowledge the assistance which they have derived from such questionnaires as were returned. The data contained in the schedule (b), however, was not complete enough to be of value.

A Sub-Committee appointed by the Practice Standing Committee have devoted much care to the scrutiny and analysis of the returns which have been of considerable value to the Committee in formulating the Standard Methods of Computation here set forth.

No. 1. Length and Width Measurements.

To be taken between the outer faces of the walls.

No 2. Height Measurement.

To be taken from the top of the concrete foundation to (*in the case of a pitched roof*)

a line midway between the point of intersection of the outer surfaces of wall and roof, and the apex; or

(*in the case of a flat roof*):

a height of 2 ft. above the roof.

In the case of a Mansard roof, its cubic contents are to be calculated separately.

No. 3. Projections.

After measuring the main structure, the additional cube is to be made for the following projections:—

(a) Porches.
(b) Bays and Oriels.
(c) Turrets and Flêches.
(d) Dormers.
(e) Chimney Stacks.
(f) Lantern Lights.
(g) Terraces and External Steps.

The Committee hope that the foregoing rules of procedure will be adopted for recent and current work, and the results entered up on the form inserted in the present issue of the R.I.B.A. Journal. If this is done and the form is returned to the Secretary of

.I.B.A., a valuable source of information ill become available, from which classified ata can be published from time to time for ie benefit of members.

Party Wall and Other Awards.

Mr. W. E. Watson, Hon. Sec. Practice tanding Committee, contributes the follow- g note on this subject to the current issue f the R.I.B.A. Journal:—

The Practice Standing Committee requests iembers to note that recent legislation may ecessitate a registration of documents in addi- on to stamping. The Land Charges Act, 925, now requires that where an owner of roperty by agreement or award restricts the se of or creates a right over any land (not eing a legal easement) such agreement or ward must, to ensure its validity against all arties, be registered under Clause No. 10 of he Land Charges Act, or alternatively in the ase of registered land by entering a caution nder Section No. 59 of the Land Registration ct, 1925.

The Practice Standing Committee has ob- ained counsel's opinion on this matter, and his may be seen by members at the Secre- ary's office on request. It is suggested that useful working clause might be drafted from he following:—

(a) "These presents shall be registered, t the sole cost of the Building Owner, as a and charge under the Land Charges Act, 925." or

(b) "These presents shall be registered, at he sole cost of the Building Owner, against he registered titles of any of the Parties erein to the land aforesaid under the Land Registration Act, 1925."

STOCKPORT ARBITRATION

Mr. Francis Jones, F.R.I.B.A., of Man- hester, the arbitrator, recently published his ward in this arbitration. The dispute arose n contracts between Messrs. Beattie, Briggs, Hibbert and Penn and West, four contractors ho were the applicants, and the Mayor, Aldermen and Burgesses of the County Borough of Stockport, the respondents. The ontracts were in respect to a housing con- ract for 101 houses in Stockport, and the rm of contract used was that of the Ministry f Health, No. 1 of the Model Forms of ender and Contract. The total claim of the ur applicants for "extras," etc., amounted £9,519, plus certain interests due under the ntracts, of which, £1,355 had been paid by e respondents, there was left a total of 8.164 claimed. The hearing occupied seve- l days in Manchester. Mr. W. T. Creswell, arrister-at-law, instructed by Mr. Thomas dderley, solicitor, of Stockport, was coun- l for all the applicants, and Mr. C. H. afford, barrister-at-law, instructed by Mr. obert Hyde, Town Clerk, Stockport, solici- .. was counsel for the respondents.

The case revolved round the correct inter- etation of the contract, which was one of e three types in general use, viz.:—

1. The lump sum non-quantity contract.
2. The lump sum quantity contract with riation clause.
3. The measure and value contract.

The arbitrator awarded the four applicants ounts totalling £6,628 in respect of their ims, including interest, and directed the pondents to pay the costs of the award. ether with the applicants' costs. Each e to pay half the costs of the transcript de by the case.

lding Construction: University College of the South-West.

ncreasing interest in the course in build- construction held under the supervision Exeter Education Committee was recorded he recent annual prize distribution at University College of the South-West. F. M. Sleeman, president of Exeter ter Builders' Federation, who presided presented the awards, stated that the se during the past session was attended 36 members, compared with 12 ten years Mr. B. Critchley gave an address on odern Paints, their Application and ufacture."

PLUMBING TRADES' NATIONAL APPRENTICESHIP COUNCIL

A meeting of this Council was held at the Northern Polytechnic, Holloway Road, N.7, on Thursday, July 21, when the following were present:—Mr. Ernest Lesser (Ministry of Labour) (Chairman); Mr. Wm. Morris and Mr. W. F. Thacker (Institute of Plumbers); Mr. B. Hellyer (National Federation of Plumbers); Dr. W. E. Sumpner (Association of Technical Institutions); Mr. Hugh Davies (Board of Education); Mr. J. L. Smyth, Mr. F. Hoey, and Mr. J. Pickford (Operative Plumbers' Association); Mr. W. Smeaton, Mr R. H. Bew and the Hon. Secretary (National Registration of Plumbers). Apologies for absence were received from Messrs. W. S. Butterworth, W. J. Jarvis and T. McKenna.

The list of schools to benefit under the Lead Manufacturers' scheme for the supply of lead to plumbing classes was approved, as circulated.

It was suggested that the Secretary should write to the National Federation, the Institute of Builders, and the Operatives' Association to ask them to endeavour to arrange meetings at Leicester, Birmingham and Cardiff, with a view to setting up Areal Councils. Mr. Hoey said that at Birmingham a meeting had been held and an apprenticeship scheme drafted which had been sent to the Secretary, who had written unofficially to say that it seemed in order. As regards the other districts, Mr. Hugh Davies said that there were a large number of apprentices being trained in various towns, including Liverpool, Manchester and Oldham, of which he promised to furnish a list. Mr Morris reported that at Southport the employers had guaranteed to send twenty boys for a half-day course on Saturday mornings, the fee to be £1 for forty weeks' tuition. The parents were expected to pay, but for the present the employers would be responsible if there was evidence that the parents could not afford the fee. They had further agreed that all boys under 18 should be apprenticed forthwith.

It was agreed that the Secretary of the London Apprenticeship Committee should be asked to give periodical reports of the progress of the Scheme in London.

It was reported that the Emergency Committee of the National Federation had been consulted with reference to the adoption of the Plumbing Trade Apprenticeship Scheme by the National Federation, and the Secretary was asked to write to the National Secretary of the operatives to request him formally to put forward the request for such adoption.

The Chairman explained that there were two difficulties in adopting the suggestion of the North-East Lancashire District Apprenticeship Council. It was very difficult nowadays to frame a satisfactory definition of an apprentice, and secondly, an apprentice might be thrown out of employment by the failure of his master or otherwise, and if he were exempt from the insurance scheme he would be disqualified from its benefits. It was agreed to adjourn the question.

The Secretary reported the receipt of £2 2s. subscription from the Worshipful Company of Plumbers, and laid a financial statement on the table showing a balance in hand of £17 16s. 7d.

The Secretary reported that as the delegates who had attended the first conference called by Mr. Searles-Wood had not had an opportunity of consulting the bodies which they represented, he had suggested to Mr. Searles-Wood that a further meeting should be called before the Board of Education was asked to receive the deputation, and Mr. Searles-Wood had agreed to this.

Some of the members thought it would be advisable for an annual test to be established, but as this was not likely to be acceded to, it was finally agreed that the Council would support the request for the reinstitution of one national examination of a lower grade than that at present conducted by the City and Guilds. The Chairman and Secretary were appointed to represent the Council on the proposed deputation.

British Government Building, Milan Fair.

We publish on this page a view of the British Government Building at Milan Fair. We are informed that English building trade representatives recently at this Fair included Mr. H. C. Gaffney (of Messrs. Perry & Co. (Bow), Ltd.), and Mr. D. Maloney (of Messrs. Mander Bros., of Wolverhampton). Mr. Gaffney, during his visit, consulted with Arnaldo Mussolini (brother of Il Duce) regarding the proposed tube railway for Milan.

Building Trade: Conditions for August.

Employment during August, says the *Ministry of Labour Gazette*, varied somewhat as between different centres, but it was generally good with skilled operatives in most districts, and moderate, on the whole, with unskilled workers: a little overtime was worked in some localities, mainly on housing schemes. Employment was generally better than in August, 1926, when it was adversely affected by a shortage of materials arising out of the stoppage in the coal-mining industry. As regards individual occupations, employment was very good generally with plasterers; it declined a little with bricklayers, but was good on the whole: an unsatisfied demand for the foregoing classes of operatives was again reported from a number of centres. Employment remained generally good with carpenters and joiners and good, in most districts, with masons and slaters; it showed some improvement with plumbers and was generally fair. The decline which affected painters and decorators during the preceding two months was checked during August, and employment was fairly good, in most districts, with skilled men: it was moderate, on the whole, with tradesmen's labourers.

British Government Building, Milan Fair.

TRADE NEWS

Change of Address.

From October 3 on, the offices of Messrs. Walter Lawrence and Son will be removed to new premises in Sun-street, Finsbury-square. The new telephone numbers will be London Wall 0963, 4 and 5.

Travelling Exhibit of Radiators.

The travelling exhibit of the National Radiator Co., Ltd., of Hull, fitted with a working installation of the "Ideal" Cookanheat and "Ideal" Classic Radiators, will demonstrate as follows:—September 27, in Bridge-street, Wellington; September 30, Garage-yard, adjoining War Memorial, Burton-on-Trent.

Power Pumps.

An interesting catalogue (344) has been recently issued by Messrs. Tangyes, Ltd., of Birmingham, in which are set out many styles and sizes of their power pumps for use with various liquids, and for all purposes—fire, boiler-feeding, etc. The catalogue, which is in good display and fully illustrated, will gladly be sent upon request to the makers, at Birmingham.

Concrete Exhibits at the Glasgow Exhibition.

The "Winget" stand at the Glasgow Housing Exhibition, which opened in the new Kelvin Hall on September 21, contains some striking exhibits of concrete construction methods. Interesting features are three models of the open drum mixer, by means of which Messrs. Winget (1924) Limited, who celebrate their coming of age during the present year, claim to have solved the problem of the perfect concrete mix. In most other mixers of the open drum type, the mixing process brings the large aggregate to the top and sends the small aggregate to the bottom—the most fruitful source of weak and unsound concrete. This trouble has at length been mastered by the Burn-Lancaster patent drum, which renders it impossible, so we understand, for any separation of the materials to take place in this machine, no matter how long the mixing is allowed to continue. Besides this range of mixers, Messrs. Winget are exhibiting several types of their concrete block and slab-making machines, including the No. 2A pressure machine.

THE SCOTTISH BUILDER

NEW BUILDINGS IN SCOTLAND

Selkirk.—HOSPITAL.—The movement for cottage hospital provision in Selkirk is now proceeding. At the meeting of the General Committee, appointed by the public to carry through the scheme, it was reported that as the result of the appeal the sum of £6,493 16s. had been subscribed

Brechin. — EXTENSION. — The Forfarshire Education Authority has forward plans for the reconstruction of Brechin High School, provision being made for six extra classrooms for domestic science and science and art departments. The cost will be about £18,000. Plans have been passed also by the Dean of Guild Court for an extension to the Boy Scouts' headquarters in Bank-street.

Dundee.—BUILDINGS.—Plans and sections of the following new buildings have been lodged at the office of the City Engineer :— Barrack-street, alterations for Trustees of late Lewis Mackenzie, Messrs. Gauldie & Hardie, architects, 26, Commercial-street; Blackness-avenue, house for the Rev. Provost A. C. Don, Messrs. Thoms & Wilkie, architects, 21, South Tay-street.

Rothesay.—HOUSING.—The Town Council has resolved to pass an order for the compulsory acquisition of 228 acres of land at Columshill-place for the municipal housing scheme, subject to confirmation by the Scottish Board of Health.

Perth. — RESTORATION. — The Restoration Committee of the Ancient Church of St. John's, Perth, has decided to proceed with the restoring of the east part or choir of the church. This part of the work is to cost about £12,660, and the architect, Sir Robert Lorimer, is to proceed with the operations at once.

Glasgow.—HOUSES.—The Corporation have under consideration housing schemes involving over 2,000 dwellings. The Housing Committee recommends the adoption of an improvement scheme, affecting 1,600 houses in t Calton area. The same committee have al agreed that the Director of Housing shou prepare a report on sites suitable for t immediate erection of 1,000 houses. T Dean of Guild Court has approved the folio ing :—

Anniesland Wesleyan Methodist Churc alterations and new building;

Glasgow E.C., steam baths in St. Roll public school, Garngad-road;

Housing Department, bowling green a tennis clubhouse at Baronald-drive, Kelv dale;

Electricity Department, sub-station at La caster Crescent-lane;

Housing Department, four houses Baronald-drive, Kelvindale.

Edinburgh.—CINEMA.—A new company, t Rutland-square Picture House, Ltd., has be registered for the purpose of erecting a p ture house to seat about 2,500 people. A s has been secured at the junction of Cannn street and Torphichen-street, on the west s of Rutland-square. Plans are being prepar by the company's architect.

Galashiels.—HALLS.—A start has been ma with the work of erecting a suite of ha in connection with Galashiels Parish and S Paul's Churches at an estimated cost £6,500. The architect of the scheme is M Jeffrey Waddell, of Glasgow.

Giffnock.—CHURCH.—A parish church being built at Giffnock. The estimated c is £13,500, and seating accommodation provided for 710.

Falkirk.—REBUILDING.—The Falkirk Tow Council has decided to restore to its origin condition the historic steeple which w badly damaged by lightning on June 17 la The scheme is to cost £2,400.

Obituary.

The death has occurred, at 24, Ferryl place, Aberdeen, of Mr. J. Pope, gran merchant, at the age of 74.

BUILDING TRADE WAGES IN SCOTLAND.

THE following are the present rates of wages in the building trade in the principal towns Scotland. Every endeavour is made to ensure accuracy, but we cannot be responsible for erro that may occur :—

	Masons.	Bricklayers.	Carpenters, Joiners.	Plasterers.	Slaters.	Plumbers.	Painters.	Labourers—Masons', Bricklayers', Plasterers'.

ESTIMATING ON RIGHT LINES

Everyone whose business it is to quote for building work should master the principles upon which estimating is based. These principles are clearly explained and illustrated in

'HOW TO ESTIMATE'

by J. T. REA,

a unique and invaluable work which is not excelled in thoroughness or in scope by any similar book known.

Fourth edition (now ready). 540 pages. Price 15s. net (by post 15s. 9d.). Containing thousands of prices and hundreds of examples of analysis, showing how a builder can make up rates for himself. In view of the difficulty of fixing standard prices under present conditions, the author has included an important series of Adaptation Tables and Percentages (corrected to February, 1927), *which show how rates may be adjusted to meet variations at any time.*

Before purchasing any other book on this vitally important subject, you are invited to inspect this—the standard work which is in use by over 30,000 builders.

A Copy will be sent by return, and your Remittance refunded if the Book does : : not satisfy your requirements : :

B. T. BATSFORD, LTD.
Publishers, 94 High Holborn, London, W.C.

THE BUILDER

A JOURNAL FOR THE ARCHITECT AND CONSTRUCTOR

WITH WHICH IS INCORPORATED "THE BRITISH ARCHITECT."

VOL. CXXXIII. No. 4417. SEPTEMBER 30, 1927.

WHAT IS A CHEAP HOUSE?

IF we are so to impoverish the English language as to link the good old English word "cheap" with nastiness, there is no useful purpose served by seeking an answer to the title question. Nobody of normal healthy temperament deliberately seeks nastiness, and, therefore, nobody of this sort would seek cheapness if we are to enslave ourselves to a phrase. The fact remains, however, that most of us are anxious to find the cheap thing in houses, as in other things, and while we are pleased to receive full value for the shilling, we are delighted to get equal service out of tenpence.

The quest for the cheap house is no recent phenomenon, though the War undoubtedly aggravated an already acute problem. There are, moreover, a number of things in the life of the average small middle-class man directly attributable to the War, and which have fundamentally affected the view from which economy has to be regarded. Cheapness is no firm standard from which costs may be dated, and there are few who would agree upon its interpretation.

The whole issue of the question depends very largely upon the correct demarcation to be made between economies that can most profitably be adjusted out of capital, and those which are essentially the concern of income. In devoting our attention to the middle-class outlook we may be able to define, within certain broad limits, the point at which it is economically sound to disperse a periodical outgoing by means of an immediate capital outlay, and in so doing we may be going a long way towards the end of our quest. The heavy burdens that have been cast upon the middle-class man since the War are too well known to be elaborated. What we are concerned with are the directions in which retrenchment has been exercised to restore the balance, and, in particular, its effect upon the character and standard of the small house.

In what way is the small middle-class house of to-day different from that serving the same class of occupier some fifteen years ago? And, assuming there is a difference, what are the factors which have called forth the change, and have they been served by the change? Generally speaking, we shall probably find that there are more three-bedroomed houses in this class in proportion to those with four bedrooms and over; and that the rooms are, as a rule, slightly smaller than formerly. We shall find that the kitchen unit is less pretentious and more simple in arrangement; and that exteriors are plainer and less elaborate than the style demanded and obtained under another standard of taste or fashion. We find, in fact, that the accommodation called for is very much the same as that which considered opinion has found good for the working man of to-day.

There is little doubt that, to some extent, a certain relationship of habit has been developed out of the mixing of all classes in the ranks of the Army, and that this rapprochement of distinct ways of life has found an architectural expression; but we believe that a more compelling factor has been the domestic servant problem. The need for cutting down expenses, the test of War upon our womenfolk, and a revolt against the restricted liberty of domestic service are distinct influences which have combined both to produce and solve the problem at one and the same time. The more independent young woman of to-day feels no social disgrace in honest household exercises for her own family, and has convinced her mentor that not only can she carry this work out without loss of dignity, but with greater thrift than was the case when an uninterested party had it to do. Where a domestic servant is employed, it is no longer as the outward and visible sign of respectability, but for the useful purpose of relieving the overworked mother of something that would hinder her in her maternal duties. No longer is it done largely for ceremony, but entirely for utility. Often the domestic help, under such circumstances, is a companion, living *en famille*, or comes daily, leaving the house when the work is done. In neither case is there a need for a roomy kitchen, free of sink and unsightly pots and pans, any more than such accommodation is needed where there is no domestic servant at all.

From this follows the planning of the small, compact working kitchen, in which range and sink and dresser and store cupboards are arranged in the most convenient way possible. In other circumstances, a separate scullery was an essential addition to contain most of these fitments. The same problem is at the root of the more limited bedroom accommodation which we have noted; for with the partial elimination of the resident maid the need for her sleeping accommodation is no longer there. These things move towards the cheap house. Other factors arising out of the same problem are less clear in their direction.

There have been many ideas upon labour-saving construction and planning to make easy the path of the busy housewife. These are largely sound in principle, but in the aggregate they tend to mount up the first cost of the house. The man who has to face the choice must consider whether the additional capital outlay will bring back a proportionate yearly saving out of income; and, if so, whether it is more convenient to pay the lump now at once, or defer it by way of periodical payments of, perhaps, greater capital value. It is probable that in a large proportion of cases, the harassed middle-class house-seeker, to whom the acquiring of a dwelling is a relatively prodigious effort, will experience less financial upset if he restricts his capital expenditure to a reasonable minimum and suffers the small increases in his running expenses. For him the small house can be advised with the fewest units compatible with a reasonable foresight as to future needs; the simple house, in plan and external treatment, in materials cheap enough to be deemed not luxurious, and good enough to bring pleasure to his eye and efficiency in service. Equally it must not be forgotten that it must be a saleable proposition, in view of possible movements. Real estate is a poor investment indeed if it is not possible to realise something approaching its believed value. Complications should be avoided, and "gadgets" taboo; and natural convenience should be desired rather than that arrived at with obvious effort.

"How am I to arrive at this perfect dwelling?" asks the house-seeker. It is easier to generalise than to give the direct and useful answer, but we believe that the essentials of the cheap house will be arrived at by the man who is trained to set his ideas on paper; to simplify the science of building by the science of planning; to make a right choice of materials, and direct the right handling of them. Above all, this is the man most competent to apply considerations to the best advantage in each case as it arises. We know that the best builder makes no claim to all these qualities at once, and we have no doubt whatever that the architect has his place in all classes of building, small or great, and in none more clearly than in the production of the really cheap house.

NOTES

Manchester Town Hall Extension Competition.

We add our congratulations to the many Mr. Vincent Harris will have received from his brother architects on his success in this important competition. Mr. Harris's work is based on traditional lines, yet it is thoroughly up to date. His planning is always excellent; his elevational treatment scholarly and invariably distinguished by that sense of proportion which is so essential in good architecture. He has avoided throughout his career anything in the nature of experimental or freak building; hence his work, unlike much modern architecture, is likely to be of interest to future generations. Manchester is fortunate in obtaining Mr. Harris's services. Mancunians may be assured that their new building when erected will be a worthy addition to their City. Amongst Mr. Harris's recent works the following may be mentioned:—Sheffield Memorial Halls; Taunton School War Memorial (won in competition); Messrs. Atkinson's new premises, Old Bond Street; The Western University, in conjunction with Mr. S. K. Greenslade (of which the Prince of Wales recently laid the foundation stone); a house in Grosvenor-square; Pavilions at the British Empire Exhibition; Fire-stations at Glamorgan and Cardiff, and 900 houses for the Watford District Council. Mr. Harris also was the winning architect in the competition for new offices for the Board of Trade, which were to have been erected on the Embankment. Unfortunately this able design was not carried out. He was also placed second in the Royal Hospital School Competition, Holbrook.

The Restorers' Art.

At a time of so much so-called restoration work, we have to regard it with some caution, nor must we conclude too much from it. If it became a paramount object to preserve everything, the country itself would become merely an extension of the Museum habit. Life can only take up a certain amount of activity, and if its activities are too preponderatingly set on preserving the old, it may reach an excess like to the extensive use of oxygen to delay inevitable decease, and we may forget at the same time what is owing to our own creative genius. The records of old achievement are more easy of admiration, sheltered in the twilight of the past, and it demands far less character and appreciation to grow eloquent over these than to foster assurance in our own contribution. What we should not forget is that it is the latter which matters most, that our own life to-day should exalt the witness of beauty and encourage it in every way, and the two outlooks seldom go together. The antiquarian is generally the most impatient of the achievements of his own time, and we know how small is the equipment required to specialise on old masters! The man who has made most opportunities for his contemporaries serves best the State and posterity. This is no more than to say a right outlook will prevent us from having only eyes in the back of our head.

Preserving the Cottages.

There are several most useful provisions in the pamphlet issued by the Council for the Preservation of Rural England, in regard to retaining the character, both in design and materials, of the old cottages when reconstructing or repairing them. Much injury in the past has been done to the beautiful stone cottages in the Cotswolds by the substitution of brick for stone in the repair or reconstruction of chimneys, lacking in any identity with the original character. Another instance is where, the stone mullions of the windows becoming decayed, instead of repairing them they have been replaced by wooden framed lights of purely utilitarian character. It is not impossible to believe that as much of this has happened through want of care as from desire to save expense. When the small farm or holding was absorbed by the larger landowner cottages and farms were divided to increase the accommodation for labourers replacing the small farmer. A long period of neglect has now to be remedied. There are difficulties, no doubt, of

Bridge at Davila, Spain.

A Garden Vase in Cast Lead.
(*See page* 497.)

account of the cost, for which other means will perhaps be found, but the retention, or rather the rescue of our village architecture from decay, has become a national issue, and to preserve it, an obligation of good citizenship. If only the same spirit that animates the promoters of this new Council could penetrate to our road authorities, the ancient charm of our country roads might yet be saved from further mutilation and the injury being done to provide for mechanical traction arrested.

The Gainsborough Bi-Centenary.

It would astonish the gifted Gainsborough, whose magnificent landscapes hung in his dark hall and on the stair for years, because no one would buy them, were he able to see the scale of the great commemoration of his art to be held in the Ipswich Museum and Art Gallery in October next. The collection is probably the most important yet brought together, and pictures are being lent by private owners, corporations, and Museum and Art Galleries. Norwich has had already its commemorative exhibition of old Crome and other Suffolk painters, and this one and a yet greater contemporary bids fair to become the most important. English art, incomparable in its way, has suffered during the last half century, owing to cosmopolitan influences overriding the national character, which in painting, as in all art, is so important. It is no popular prejudice to believe we grow best on our own roots, and that nothing can make up for the loss of our own identity expressing itself intuitively and without foreign prepossessions.

G. F. Watts and Modern Art.

The more or less traditional character, as derived from the great masters of Italy, which informed the work of Watts fitted the character of his outlook, always grave and dignified and exalted by a subject matter always significant. And it is interesting to contrast with his approach, the widely differing interpretation in much of the art of to-day. Taking representative examples of the latter, such as the pictures recently acquired for the Tate Gallery by Stanley Spencer, "The Resurrection," and Mrs. Dod Proctor's "Morning," we see a contrast both instructive and significant. It was Aristotle who, in recording the primary attributes of life, gave "thought" as one of the chief of them. In such a view the picture of the "Resurrection" is childish and has no reality of interpretation whatever, and this absence of creative thought limits the resources of the painter to a much more contracted use of his vehicles. If we, for instance, compare it to the "Eve Repentant" by G. F. Watts at the Tate, the greater resource and mastery in the use of his vehicle is obvious when compared with the more conventional handling of the former. And so it is in the case of Mrs. Dod Proctor. And in observing this we understand the primary limitation in much of popular modern art and the reason for it. Painting only takes wings on thought, and the subject matter determines the level, as a noble thought will robe itself in a beautiful expression. Both the artists we have named adequately exhaust the resources of a contracted and very materialistic outlook, and do it very wonderfully. But their limitations are those of an outlook in a darkened room. Their outlook will not—cannot—take them any further. Action cannot rise above the thought which inspires it. Relativity here is axiomatic, not questionable.

Restoration of Lincoln's Inn Fresco.

This, though a word of rather evil omen, owing to the destruction wrought in Victorian days, is yet one to give assurance. It was Goethe who said, "men are to be valued as they know how to value," and in preserving the fine wall painting of a master, so far as this can be accomplished, the statement receives confirmation. For wherever the achievements of noble human activity are found recorded, they should be regarded as a most precious inheritance, a support and inspiration to our own culture. So we are glad to hear of the restoration of the great wall painting in Lincoln's Inn by G. F. Watts. This very exalted piece of wall painting has been gradually fading away, owing to the bad conditions of the London atmosphere. We are told by a contemporary that the painting "has been restored to its original glory." This, however, is an exaggeration of what is possible, but through what has been accomplished, a further extension of life has been given to it. Another interest is given to the great painting that it contains the portraits of a number of the artist's friends, who were his famous contemporaries.

Small Statues in Cast Lead.
(*See page* 497.)

GENERAL NEWS

Professional Announcements.

Mr. William Davidson, F.R.I.B.A., of 4, Melville-street, Edinburgh, and Mr. M. M. Ochterlony, architect, of 18, Melville-street, Edinburgh, have entered into partnership and will carry on under the name of Messrs. Davidson and Ochterlony, architects, at 2, Coates-crescent, Edinburgh.

Mr. H. H. Connybeare, quantity surveyor, of 17, Southampton-street, Bloomsbury, W.C.1, has succeeded to the business of the late Mr. Morgan H. Young, of the same address. Telephone : Holborn 4557.

Mr. W. G. Cruickshank, surveyor, has removed his office to No. 7, Southampton-street, Bloomsbury-square, W.C.1. Telephone : Holborn 1175.

Mr. W. T. Davenport, F.S.I., quantity surveyor, has removed his offices from 32, Victoria-street, S.W.1, to 13, South-square, Gray's Inn, W.C.1. Telephone number, Chancery 7322.

Surveyor's Estate.

Mr. Thomas James Carless (72), of Sheen-road, Richmond, Surrey, left £28,932 (net personalty £20,652).

Engineer's Estate.

Mr. Joseph Mackay, M.I.Mech.E., of West Park, Eltham, and of Bank Chambers, High Holborn, W.C., late Chief Government Marine Surveyor at Bangkok, Siam (personal estate in Great Britain), left £44,300.

Sir R. W. Edis's Estate.

Colonel Sir Robert William Edis, K.B.E., C.B., V.D., of The Old Hall, Great Ormsby, Norfolk, a former president of the Architectural Association, who acted for the late King Edward in various alterations and additions at Sandringham and at York-cottage, and who died on June 23, aged 88, left estate of the gross value of £68,315, with net personalty £65,694.

York Minster: Return of "Great Peter."

After an absence of a year, during which time it has been recast, so that it is now said to be the deepest-toned bell in Great Britain, York Minster's big bell, Great Peter, has returned to York. The bell will be dedicated on October 2.

Broadstairs Church: Design by a Monk-Architect.

It is hoped to commemorate the fiftieth anniversary of Broadstairs parish by laying the foundation-stone of the new church of Our Lady of Pradstow. It is understood, says the *Catholic Times*, that the plans will be entrusted to a Belgian Benedictine monk-architect, the designer of the National Basilica of the Sacred Heart which is to be built at Brussels.

University of London, University College.

The session 1927-28 opens at University College on Monday, October 3. Day students of the Bartlett School of Architecture will be received by the Provost, Professors and other members of the staff on Monday and Tuesday, October 3 and 4, from 10 a.m. till 1 p.m. Students of the evening courses in architectural design and of the architecture atelier will assemble on Wednesday, October 5, at 5.45 p.m. A special course of five lectures on "The London Building Acts as Affecting the Practising Architect" will be delivered by Professor R. Elsey Smith on Mondays at 6 p.m. beginning October 24.

Among the public lectures that have been arranged for the first term are the following: "Egyptian Architecture," by Professor Sir Flinders Petrie, F.R.S., on Thursday, October 6, at 2.30 p.m.; "The Equipment of a Mediæval House," by Mr. H. Clifford Smith, Assistant Keeper, Victoria and Albert Museum, on Tuesday, December 6, at 5.15 p.m. Particulars of these and other public lectures may be had on application to the Secretary, University College, London, W.C.1. A stamped addressed envelope should be enclosed

Bi-Centenary of John Wood.

Bath is to celebrate in a few weeks' time the bi-centenary of John Wood, who began his great work of rebuilding and replanning the city in 1727. The Georgian architects of Bath is almost a national monument and many leading architects and others interested in civic architecture and town planning will take part in the celebration. An exhibition of old prints and drawings will be held, and it is hoped that some of Wood's original drawings and plans may be forthcoming. So far as is known no portrait of John Wood exists

Land Drainage.

The Royal Commission on Land Drainage have just returned (says the *Times*) from a highly instructive and interesting inspection of the Dutch systems of drainage which they have carried out at the invitation of the Netherlands Government. The Commissioners examined typical drainage areas and river outfalls, and saw the works of sea defence and land reclamation which are being carried out south of The Hague and on the Zuyder Zee respectively. The Dutch systems of drainage rating and administration were explained to the Commissioners in lectures given by the Dutch experts, and practical examples were pointed out on the ground.

COMPETITION NEWS

Street Improvements, Newport (Mon).

Plans have been prepared by the Newport (Mon) Corporation for proposed improvements at the junction of High-street and Shaftesbury-street, and a premium of 10 guineas is to be offered for the best design for buildings on the Corporation land fronting both thoroughfares.

Manchester Town Hall Extension.

Mr. E. Vincent Harris, of St. James' square, London, has been awarded the £1,0 premium for the best design for an extensio of Manchester Town Hall. The extensio which will accommodate the staffs of t waterworks, education, public health, a electricity committees, and is to make pr vision for a new reference library, lectu hall, and Council chamber, will cost ov £1,000,000. The site, which adjoins t present town hall, is triangular. One fronta will be to Mount-street, another to the M land Hotel, and another to St. Peter's-squa The opportunity will be taken for str widening and for the enlargement of Peter's-square. Sixty-four architects ente for the competition, which closed on Ja ary 8, and from those entrants the assess Messrs. T. R. Milburn, Robert Atkinson Ralph Knott, selected the following six ar tects to submit final designs :—Messrs. Br shaw, Gass and Hope, Bolton; Messrs. C cutt and Hamp, London; Mr. J. B. S. C per, London; Mr. Harry S. Fairhurst, M chester; Mr. E. Vincent Harris, Lond and Mr. E. Berry Webber, London. completion of their designs all these ar tects were entitled to a fee of £500 each.

COMPETITIONS OPEN.

Municipal Buildings and Business Premises, Herne Bay. Premiums: £150, £100 and £50. Professor A. E. Richardson, F.S.A., F.R.I.B.A., assessor. Apply Clerk to Council, Westminster Bank House, Herne Bay. Deposit of £1 1s. required:	Particulars published in Sep "Builder," in (July 8 Oct
Municipal Buildings, Wimbledon. Premiums: £200, £150 and £75. Mr. H. V. Ashley, F.R.I.B.A., assessor. Apply Mr. Herbert Emerson Smith, LL.B., Town Clerk. Deposit of £2 2s. required:	July 15 Nov

Bayonne.

CORRESPONDENCE

[While we are glad to publish letters on professional and other matters of interest to our readers, it must be understood that we do not necessarily endorse the remarks of correspondents, who will oblige us if they will express their views as briefly as possible.]

The Porch of the Temple Church, London.

Sir,—I have to thank Mr. A. R. Powys for his courteous reply and explanation to my letter which appeared in your issue of September 9. It certainly seems extraordinary that the Benchers of the Middle Temple should consult such a reliable authority as the S.P.A.B., and then ignore its decision. I have studied many of Mr. William Weir's restorations, particularly in East Anglia, and I doubt if there is a safer guide to the handling of ancient buildings in Britain at the present.

I could not examine the outer west arch, as it was covered by tarpaulins, but the three shafts of the jambs of the inner west door which were cut out at the end of August were practically perfect. I agree with Mr. Powys that these were not original work, but surely sound work of 1840 date is more valuable than work of to-day.

William Davidson, F.R.I.B.A.

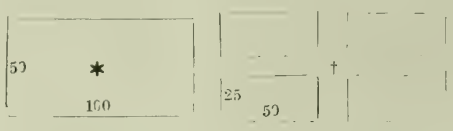
Edinburgh.

Approximate Estimates by Cubing.

Sir,—It does not appear to be sufficiently recognised that there are two distinct stages in this work involving (1) A question of fact; (2) A matter of personal opinion or experience.

The question of fact is a matter of measurement only. "What is the cubic content of the building?" Because it is a question of fact it does not need a Committee of R.I.B.A. to tell us how to set about it. Some computations are at best approximate, and it becomes a question how far accuracy shall be taken. The area of a circle, for example, is πy^2 for π we may take 3.1, 3.14159 or 3.1 etc. to a hundred places of decimals and even then not have computed it exactly. It is much the same with the cubic content of a building. We ascertain it more or less accurately as the occasion and our judgment demand. It has never been the custom to measure in small projections such as cornices, eaves, bargeboards and the like. It is much the same with chimneys, dormers, lanterns on the roof; where they are small they are ignored, where they are important they are measured. According to custom the concrete below footings, for some undefined reason, is never measured.

Projections involving much cost in proportion to size are generally separately estimated for by other means, but they may be measured and included, the price being modified accordingly. (See below.)



Having ascertained the cubic content "What price per foot cube is to be used?" This is purely a personal judgment. It depends not merely on the nature of the building but on the specification. Let us exaggerate a little in order to understand.

"A" builds a house; its cost works out at exactly 1s. a foot cube. "B" erects a house adjoining, similar in plan and elevation and all detail shown on drawings, but it has four coats of paint instead of three coats like "A." Obviously it must cost more than 1s. a cube foot.

If instead of merely an extra coat of paint we have 1¼ in. floors instead of 1 in. or oak instead of yellow deal, if walls are panelled or plate glass instead of sheet, there is going to be a great sum added to the shilling a foot. It would be quite possible by variation on the specification only to cover work worth 2s. a foot or 1s. a foot, the total cube capacity of the two houses being identical.

Without varying the quality of the work, it is possible to cause an increase in the rate and total cost while at the same time the cube is actually diminished. "C" proposes a simple factory 100 ft. by 50 ft. on plan and one story high. Estimate (1) roofs it in one span, 50 ft. steel trusses are needed. Estimate (2) roofs it in two spans, the 25 ft. trusses are far lighter but they need support from columns and girders down the centre of the building, and while the area of raftering and external covering is practically the same both ways, estimate (2) involves a 100 feet of very expensive central gutter and drainage to the external walls. At ¼ pitch two spans will save 15,000 to 20,000 feet cube and cost more.

If the manufacturer for his trade requires his 5,000 feet of floor space spread over several smaller buildings, each surrounded by brick walls, it is evident that while the total cubic content may be the same yet the cost per foot cube will go up because the division walls or, even more, separate external walls have to be paid for.

*Shows 300 feet run of wall.

†Shows 4 by 150 equals 600 feet of external wall.

We see then that while the cubic content remains unaltered the rate per foot will vary with changes in the specification or by subdividing the voids. The smaller the voids the higher the rate per foot.

Reversing this we may say the larger the voids the lower the rate per foot cube without any change in the nature of the design or the specification. In the case of ordinary small houses the floor area can be increased by about 50 per cent. while the total cost of the building is only increased 25 per cent. Anyone can test this with a set of plans and the priced quantities. Ordinary working drawings for small houses are made on a scale 1 in. equals 8 ft.; the quantities will apply to that. Let us read the same plans with a different scale, say, 1 in. equals 10 ft. we find approximately that gives us an increase of 50 per cent. floor area. If our plan is 6 in. by 8 in., then with the ⅛ in. scale we have 48 by 64 equals 3,072 sq. ft. with the 1/10 scale 60 by 80 equal 4,800 sq. ft., which is rather more than 50 per cent. increase.

Let us compare two rooms, say, 10 by 10 equals 100 sq. ft. and 12 by 12 equals 144 sq. ft., which is near enough 50 per cent. increase for present purpose. The area of flooring material and ceiling material will be increased 50 per cent. (round figures), but the length of wall will be 4 by 10 equals 40, or 4 by 12 equals 48. The run of wall, skirting, cornice will therefore only increase 20 per cent. for 50 per cent. increase of floor area and the number of mitres, no increase. For roof, generally, we may follow the 50 per cent. as with floors but eaves and gutters only need 20 per cent. in the run. Angles, heads and down pipes no increase at all. Many items will not change, bath, w.c., sink, and sanitary fittings and their junctions to water, wastes. Drains increase 20 per cent. with the run and nothing in expensive items like manholes. Doors and fireplaces may have a very slight increase in the larger rooms for æsthetic reasons but it is not likely. In some cases the wider spans may need 11 in. joists instead of 9 in., but on going through the whole bill in detail it will be found that 50 per cent. increase of floor area means only about 25 per cent. extra on total cost, or a much lower rate per foot cube.

Taking a house of 30,000 feet at 1s. 6d. we have £2,250. With same height (no adjustment for roof) extra 50 per cent. floor makes our cube 45,000. Twenty-five per cent. on cost gives us, say, £2,820, or only 1s. 3d. per foot cube, all details being the same.

Again let us state this the reverse way, which represents what often happens in practice. An architect designs a house containing 45,000 cu. ft.; the builder's estimate is £2,820, which is more than the client is willing to spend. He limits the outlay to £2,250, but wants the same arrangements with smaller rooms. It will be no use for the architect to ascertain that the actual tender for the larger house works out at 1s. 3d. and then expect a smaller house at the same rate. As the rooms shrink in size so the rate per foot cube will increase, and by the time the rooms are about two-thirds original size the rate per foot cube will be 1s. 6d.

From these notes two things seem to be specially obvious:—

(a) Extreme accuracy in calculating the cubic content is unnecessary. Small details such as chimneys recommended to be included by R.I.B.A. will at most be only a fraction of 1 per cent. on the total.

(b) The correct rate to apply is vital. If in order to effect a reduction in cost the plan is reduced in scale the price per foot cube will go up. Alterations in shape may reduce cubic content but actually increase the cost of the building. From which it follows that tabular statements of average prices per foot cube are of little value unless at the same time we are acquainted with the nature of the design, the sizes of the rooms, the date of erection and many other items. The extra cost of paint in the specification may have more effect on the estimated cost than cubing in the chimney stacks.

Horace R. Appelbee.

Is "Cube" a Reliable Factor?

Sir,—This matter—together with all methods of approximate estimating—was discussed in detail in articles published in your journal about April, 1926, and these articles have since been reprinted by yourselves under the title of "Approximate Estimating."

Anyone who wants a reply to this query will find in this pamphlet, with reasons for conclusions arrived at and constructive suggestions which, if adopted, would afford better data and sounder methods for approximate estimates.

It is possible that the suggestions embodied in this pamphlet might prove a useful starting point, and that architects, quantity surveyors and contractors might co-operate to thrash out a system which would be of benefit to their respective selves and to the industry at large.

Alan W. Dawson.

THE ROMANCE OF THE MIDDLE AGES

Sir Banister Fletcher, F.S.A., F.R.I.B.A., on Wednesday last gave the introductory lecture of a course of twenty-four lectures on "Mediæval Architecture" at the Central School of Arts and Crafts, Southampton Row. He dealt first with the nature of the course, which is given under the auspices of the University of London, and explained that he would deal with the study of architectural history on broad lines from a popular point of view and trace its evolution in the different countries of Europe. He referred to architecture as a visible exponent of civilisation uniting and embracing the other arts, and pointed out that all modern design was founded upon old art, although adapted in order to conform to existing conditions. Architecture being the basis of all design a knowledge of it was necessary not only to architects, designers and art students, but practically to the whole community. All who travelled required a knowledge of that subject, since the lands they visited were as a closed book without that knowledge. Moreover, the architectural work of the present day was stimulated and refined by a right study of the best work of the past.

The lecturer illustrated his lecture with lantern slides, of which some twelve hundred will be shown during the course. He showed that mediæval architecture was a continuous evolution from the round-arched or Romanesque period to the pointed-arch or Gothic period, and was the result of forces and tendencies underlying the whole life of mediæval times. Views were shown comparing the architecture of the ancient periods in history.

THE PLACE OF LEAD IN THE ÆSTHETICS OF ARCHITECTURE

BY A SPECIALIST.

An attractive and beautiful frontage, esigned in accordance with the true prinples of art, will make a direct appeal to ersons who know nothing of the excellence, otherwise, of the general planning, or the soundness of the construction. et, important as are æsthetics in architctural design, it is beyond question that n architect who can successfully combine ther excellent qualities with artistic treatent will meet with a greater measure of uccess than will another who lacks the bility to secure the combination of an rtistic frontage and a well-planned and coneniently arranged interior. In fact, it may e stated that the most successful of modern rchitects are they who are able to introuce into their planning the following four ssentials:—Beauty in the design; convenince in the arrangement; solidity in the onstruction; and moderation in the cost.

Lead has been extensively used for decorative purposes in the past, and, after a period f comparative disuse, is now coming into ts own again, as many modern buildings how. Many people who are connected with rchitecture and the construction of buildngs, whilst fully aware of the durability of ead, are still quite unaware of the extent to which it may be made use of as an artistic eature. Yet lead has artistic possibilities s great as those of any other metal, with the added advantage that it is practically indestructible, and that it does not require painting; in fact, the nature of the metal is such that its appearance improves with age. The combined effects of the tmosphere, moisture, and frost, which are o destructive to the ornamental features of tonework and brickwork, do not affect the ich ornamentation of which lead is capable. gain, when the finer ornamental features of asonry or brickwork are impaired or estroyed by force (as the result of a powerul blow, for example), it may be difficult, r well-nigh impossible, to repair or replace iem; but in the case of lead, not only can ny necessary repairs be easily and most uccessfully carried out, but the portions hat have been repaired can be made as ood and as sound as they were before being njured.

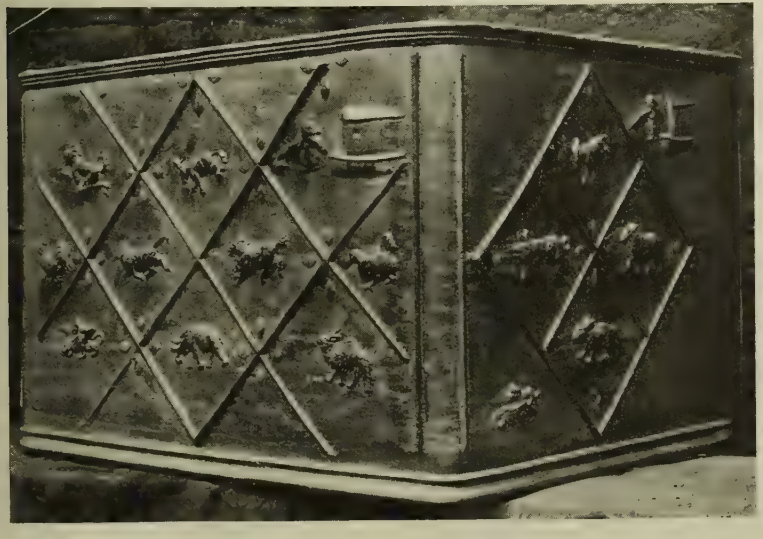
No other metal lends itself to artistic reatment as easily, and to the same extent, s does lead; not only can it be cast to any esired pattern, but it can be worked by ols to the various shapes desired, and ornamental features and details may also be worked upon it in much the same manner as repoussé work is carried out in the case of the harder metals, except that with lead it is possible to achieve results that would be difficult to obtain with any of the other metals in general use.

That architects of former times were fully aware that lead lent itself to decorative treatment is proved by the number of ornamental rainwater heads and pipes which, made of lead, are to be seen, still in an excellent state of preservation, and giving satisfactory service on a number of famous and historic buildings. There are still in existence at Hampton Court a number of excellent examples of cast lead rainwater heads, and stacks of rainwater pipes, that have withstood the wear and tear of centuries. The lead heads bear the date 1528. At St. John's College, Cambridge, there are lead heads bearing the date 1599 which continue to give as good service as when they were first fixed, as also do the lead stackpipes to which the heads are connected. During part of the nineteenth century there was a considerable falling off in the amount of cast sheet lead used for making ornamental rainwater heads and stackpipes, storage cisterns, and for other purposes in connection with the construction of various kinds of buildings. The matter is mentioned by Sir Reginald Blomfield in his book, "A Short History of Renaissance Architecture in England, 1500-1800"; the following is an extract from page 282:—"Leadwork is another of the crafts that has perished partly through the callousness of the professional architect"; and "Lead was extensively used in the sixteenth, seventeenth, and eighteenth centuries for rainwater heads, stackpipes, cisterns and fountains." In the sixteenth century ornamental cast leadwork, gilded or coloured, was used for enrichments to friezes and ceilings, the castings being fixed to the groundwork by screws, in most cases. However, the callousness of the professional architect concerning the artistic merits and the enduring qualities of leadwork has long since passed, and there is now a welcome and extensive revival in the employment of lead for the purposes already mentioned. A number of famous modern architects have helped to bring about the revival in Great Britain; whilst M. Voillet-le-Duc also employed lead for many serviceable and ornamental purposes in connection with the construction of numerous buildings he designed in France.

Pillar Lamp in Cast Lead.

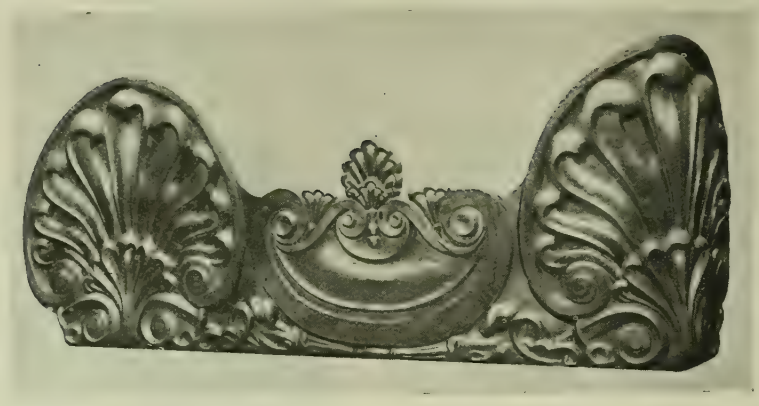
In former times the component parts of lead heads and stackpipes were joined together by means of solder, and leadwork so joined has stood for a number of centuries, and is still perfectly sound at the joints. At the present time, however, an even better method of joining is in vogue, known as lead-burning, which is really the joining of lead to lead by means of the same metal, and without the use of solder; consequently no trace of a lighter coloured metal is to be seen, lead alone being used throughout.

The surface of cast lead has an appearance which, to many people, is pleasing and attractive. In cases where a smooth surface is preferred, milled sheet lead lends itself equally well to artistic treatment.



On page 498 a rain-water head with a short length of stackpipe, on which is worked an offset and a suitable end for connecting to a round stackpipe, which, from a certain height, was continued to the ground level in a chase covered by the roughcast of the wall. The 24-inch rule upon the pipe gives an idea of the total length.

Above is a lamp for a stone pillar. The lamp is made of a number of separate pieces of cast lead which have been joined by lead-burning; it is a fine example of the lead-worker's art.



On page 493 is a cast-lead vase which has stood for centuries at a famous old castle. This illustration shows how beautifully the details may be brought out in cast-lead work. A number of these old vases had to be repaired recently, the repairs being of a thorough and lasting nature—an achievement which would have been difficult with vases made of stone or any other material.

On page 493 are two statues of boys, in cast lead, suitable for placing on stone pillars.

In the adjoining columns on this page is a flower box made of cast lead,

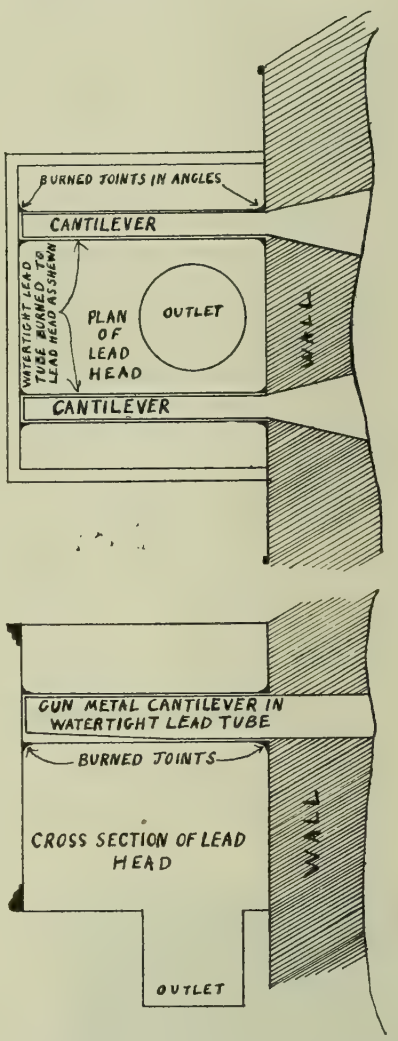
A Cast Lead Flower Box.

Lead Frieze for Roof Ornamentation.

Rainwater Head in Cast Lead.

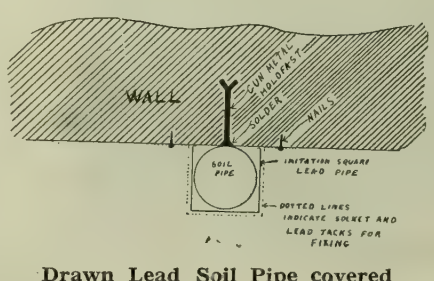
the back and the bottom being burned in. These cast-lead boxes are very suitable for terrace gardens.

Above is shown a cast-lead ornamentation for a frieze roll. Once more attention may be directed to the splendid manner in which the details have been brought out in the casting.



In the rebuilding of Regent-street much leadwork of this kind has been used upon the roofs of a number of the new buildings. By means of cast-lead work an architect may easily arrange so that the pattern of the rain-water heads and stackpipes will harmonise perfectly with the other features of the exterior of his building. Many large lead heads are of considerable weight, and in order that they may be supported with absolute security a method has been introduced by means of which the head is carried upon cantilevers, thereby giving a safety which it would be difficult to obtain by nailing or any other method. The method of fixing is shown on this page.

Many attractive frontages or exteriors which possess considerable artistic merit are rendered somewhat unsightly by a number of pipes being fixed upon them. This is especially the case when soil, waste, and vent pipes are so exposed, as these are of circular shape. Square or rectangular pipes generally harmonise better with the constructional details of exterior brickwork and stonework than do pipes that are circular in section. On several jobs with which the writer has been connected the rain-water pipes have been of square shape and made of cast lead, the soil and waste pipes being of circular drawn-lead pipe. These circular pipes, after being fixed, were covered with an imitation of the square rain-water pipe, the back of the imitation pipes being left out and the sides being turned round at the wall line, about ¾ in. in the direction of the hidden circular pipe, the result being that all the pipes on the exterior of the building appeared to be of square shape.



An illustration on this page shows clearly this method of hiding circular pipes.

On page 494 is an illustration of part of the exterior of a house which overlooks Park-lane and Hyde Park. The appearance of the exterior would certainly not have been improved by the appearance of three separate pipes for soil, waste, and vent purposes. A far more pleasing appearance was obtained by fixing the three pipes close together and covering them with a casing made of milled sheet lead. The casing is fixed in lengths, each of which has an imitation socket. As will be seen, the casing has quite an attractive appearance.

The writer expresses his indebtedness to Messrs. Stonor and Saunders, of Paddington, for permission to use the photographs of the rain-water heads, stackpipes, and other cast-lead work.

Plan and Section of a Cast Lead Head supported on Gunmetal Cantilevers.

Drawn Lead Soil Pipe covered with Square Cast-Lead Casing.

THE RECONDITIONING OF ANCIENT BUILDINGS

A scheme for giving voluntary assistanc and expert advice to those about to recon dition rural buildings or cottages under th Housing (Rural Workers) Act, 1926, has bee devised by the Council for the Preservatio of Rural England. It is now under the co sideration of the Royal Institute of Britis Architects. Financial assistance is mainl being applied for under the Act for the im provement of existing accommodation, muc of which has a pronounced architectura character and a traditional value which it i of the greatest importance to retain. It is i connection with the reconstruction of suc buildings that the scheme for making pos sible the assistance of well-qualified archi tects is designed. But as there are case where such assistance is not easily available the council have issued a pamphlet layin down certain general rules for guidance. I is pointed out, for example, that in order t retain the good proportions of many cottages upon which their character and charm largel depend, no attempt should be made to in crease the heights or to alter or raise th roofs. On the question of materials it is ad vised that new materials should be, as fa as possible, similar to those previously em ployed in the old buildings. Where thatche can be obtained, cottages that have onc been thatched should have the covering re newed. In the case of stone buildings, wher it is not possible to obtain stone slates, gree or grey are better than blue slates. In th case of repairing half-timbered cottages, on account of the cost the new work cannu be carried out in the same style as the ol it is advised that it is better to build solid walling than to attempt a superfici imitation by means of applying thin de boards of plaster.

MEETINGS

Saturday, *October* 1.

Institution of Municipal and County En neers.—North-Eastern District meeting Shildon, Durham. 2 p.m.

London Society.—Visit to Westminste The Chapter House—The Chapel of t Pyx—St. Stephen's Hall. 2.15 p.m.

Institution of Municipal and County En neers.—South-Western District. At P mouth. 11 a.m.

Monday-Wednesday, *October* 3-5.

Commercial Gas Association.—Sixtee annual Conference. At Southampton.

Wednesday, *October* 5.

Incorporated Institute of British Dece tors.—Mr. W. H. F. Starkey on "Ni Cellulose Materials." At Painters' H Little Trinity-lane, E.C. 7.30 p.m.

Thursday-Sunday, *October* 6-9.

Town Planning Institute.—Ninth an country meeting. At Winchester.

ILLUSTRATIONS

Manchester Town Hall.
Extension and Library Competition.

We illustrate this week a perspective view of the winning design in this competition, for which Mr. E. Vincent Harris, F.R.I.B.A., is the architect. We hope to publish further drawings, together with a criticism of the competition, in our next issue. Further particulars are given under Competition News, page 494.

New Offices, 2, Devonshire-square, E.C.

The site of these premises, which provide office accommodation for the Imperial Continental Gas Association, runs from Devonshire-square on the north-east to Cavendish Court at the rear, on land which in the 17th century belonged to the Earls of Devonshire. In planning the new building the accommodation to be obtained was limited not only by the irregular shape of the site, but also by the close proximity of the underground railway below, and the difficulties raised as to light and air above. The architect was Mr. W. L. Lucas, F.R.I.B.A., and the consulting engineer was Mr. H. B. Hurst, M.Inst.C.E. Messrs. Highfield and Roger Smith were the consulting engineers for the electric light, and Messrs. Stoner & Son were the quantity surveyors.

Messrs. Trollope and Colls were the building contractors, and they executed all the decorations with their own staff from the architect's detail drawings. The facing bricks are from Messrs. Thos. Lawrence & Son's kilns, and Westmoreland green slates cover the roof.

The following were some of the subcontractors:—Powers & Deane Ransomes, Ltd., steelwork; The Kleine Fire-Resisting Floor Co., and Stuarts Granolithic Co.; floors; Bassant & Co., parquet floors; The Heyland Birmingham Rubber Co., rubber floors; Waygood-Otis, lifts; Russell & Co., hot water; R. Crittall & Co., panel heating; Bawlings Bros., electric lighting; Dent & Pellyer, sanitation; H. J. Jenkins & Sons, Fenning & Co., Ltd., and H. C. Tanner, marble work, etc.; S. W. Francis & Co., iron shutters.

The Tricity Restaurant, Savoy-hill, Strand.

This restaurant was carried out for the British Electric Transformer Co., Ltd., and occupies the ground floor and basement of previously existing premises. The area available was so limited that, in order to obtain sufficient accommodation for kitchen service, etc., it was necessary to remove the floor between basement and ground floor in the rear of the building, and to form three floors in this space. The restaurant is entered at street level at the top of Savoy-hill. The entrance vestibule leads into a lounge containing cloak room, telephone room, etc., and off which opens the American bar and ground-floor restaurant. From the last a wide staircase leads to the basement where there is a larger restaurant having a spring floor over much of its area for dancing. The rear of the building is occupied by the kitchens, service department, lavatories, etc.

The cooking is done entirely by means of the "Tricity" cookers; no power other than electricity was installed for this purpose. A large independent boiler in the basement supplies hot water for dish washing and lavatory basins, and provides heat for warming the air in connection with the ventilating scheme.

The whole of the decorations and lighting effects were designed by the architects. The walls and ceilings of the ground floor (excepting the American bar) are coated with "stuc" of a natural stone colour, the ornament being dull grit, except the flower and fruit drops, which are painted in bright colours. The doors are in mahogany, stained very dark brown. The vestibule and lounge are treated similarly, the former having a rough surface gilded dome, illuminated by concealed cornice lighting. The American bar is carried out in a different style, wall panelling, counter and specially designed bar fittings being in oak. The ceiling is barrelled and has low relief plaster decorations and is painted a parchment colour. The staircase to the basement is in teak, with a small amount of gilded ornament.

The walls and ceilings of the basement restaurant are finished in Keene's cement, and painted a warm honey colour. The walls are divided into bays by flat pilasters, each bay having a panel formed with a band of Pompeian red, upon which are applied ornamental pateræ. The caps of pilasters, pateræ and ornament generally are treated in a low tone of gold. The basement is lit entirely by artificial light, an effect of sunlight being obtained by means of a large number of wall lights shaded with yellow silk, no direct lighting being employed. The "Tricity" "Sun Ray" radiators are installed throughout. These give at the same time heat and glowing light.

The architects are Messrs. Imrie and Angell, F. and L.R.I.B.A.

The general contractors were Messrs. F. G. Minter, Ltd., and the following were subcontractors:—G. Jackson & Sons, Ltd., plaster decoration and colour decoration; Francis Morton, Junr., & Co., spring floor; Bassant's Parquet Floor Co., Ltd., strip oak floor; J. P. White, fire-resisting doors; Sturtevant Engineering Co., Ltd., ventilation; Lafontaine Bros., bar and kitchen fittings, etc.; Young & Co., steelwork; Hickman, Ltd, bronze canopy; Samuel Haskins, bronze work; Lightfoot Refrigeration Co., Ltd., refrigeration; H. Pontifex & Sons, Ltd., sanitary fittings; British Electric Transformer Co., Ltd., electrical equipment; H. Carter and Co., Ltd., and Art Pavements and Decorations, Ltd., tiling; F. G. Minter (Decorations), Ltd., upholstery; Boro' Electric Signs, electric signs; James Ritchie & Sons, lifts; Edison Swan Electric Co., Ltd., electrical fittings; British Electric Transformer Co., Ltd., electrical cookers, etc.; Fenning & Co., Ltd., marble floor; Luxfer Prism Syndicate, Ltd., fire-resisting glass; Synchronone Co., Ltd., clocks.

House at Saltwood, near Hythe.

This house, completed in 1926, stands on high ground overlooking the English Channel. The brickwork is of varying colour of purple and grey, with slight emphasis in quoins and diaper work. The owner of the house was a retired clergyman, and this suggested the layout of the garden below the house, which was in the form of a church plan with nave, aisles, transepts, and apsidal chancel. There are five bedrooms on the first floor and two bedrooms and a large studio on the second. The general contractors were Messrs. F. S. Longly & Sons, of Hythe; the only sub-contractors being Messrs. Pither's, of Mortimer-street, W., who carried out the central and domestic heating.

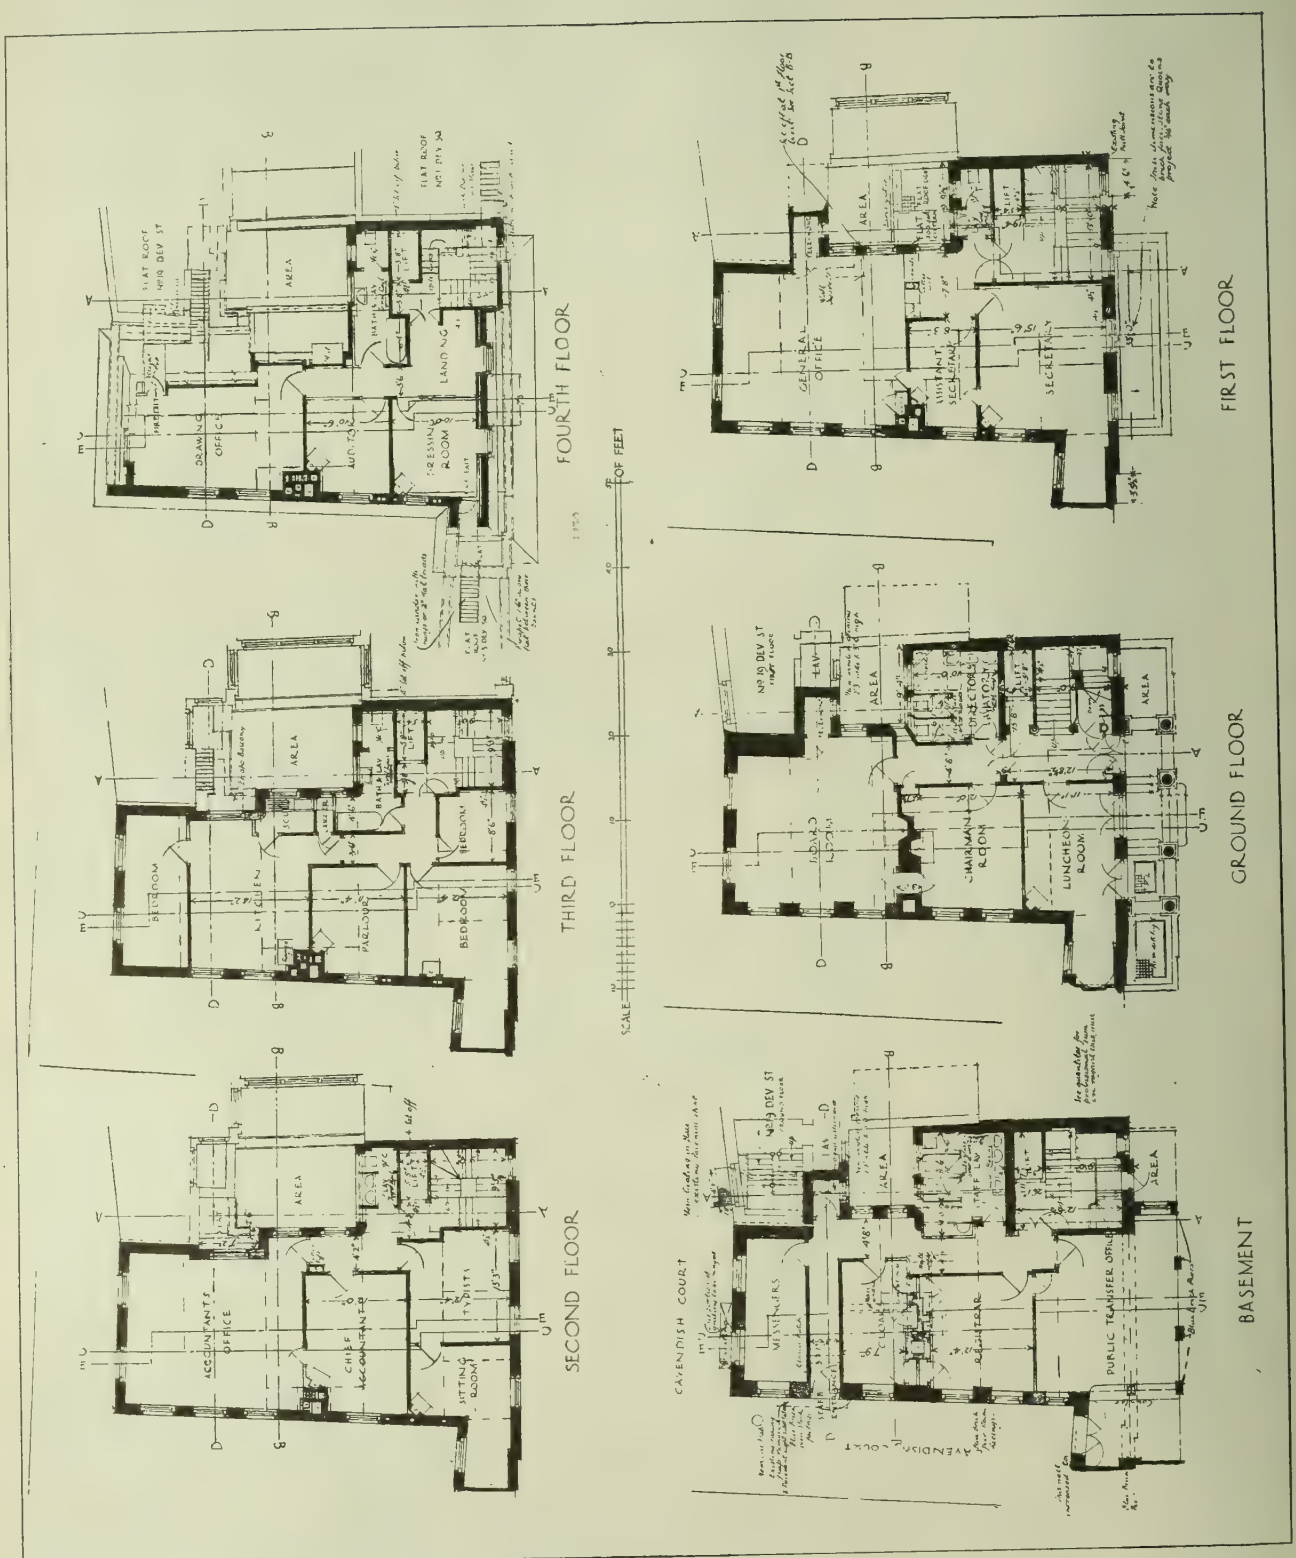
The architects were Messrs. Baillie Scott and Beresford.

EXHIBITION NOTES

Arlington Gallery.

The collection of travel sketches in Australia and elsewhere, by Mrs. J. Thornton Tweddle, exhibited in this gallery, though slight—in execution, show observation, and are of a certain vividness of realisation, and the pastel and oil medium in which they are painted is used skilfully. Such sketches do not call for extended notice, being more the pleasant record of travel than works of art. Some of the best among them are those in which effects of atmosphere are recorded, such as Nos. 14, 37 and 73. There is hardly a hint beyond what the ordinary traveller to such places would see for himself, and the supply of such sketches is inexhaustible. But of their kind we can commend the artist's capacity to get broad effects and to use her materials deftly. Nos 9, 15, 43, 77 and 80 are among the best.

The St. George's Gallery.



There is a freshness of observation and freedom of treatment in the pictures (water colours) shown by the three artists contributing to this exhibition. Executed in light and cool colour, lyrical rather than dramatic in their point of view, they have a certain withdrawn and intimate character very full of suggestion. Such pictures would well adorn the domestic interior and should be sought after by picture lovers. Nor is it quite fair because these artists approach their work in a temper similar to that of Paul Nash to regard it as derivative only, the truth being that it grows out of the same soil of modern outlook, and is otherwise quite itself. There is some misapprehension in burdening ourselves with the notion that such work is the outcome of "modernity." On the contrary in the singularly real and intuitively guided expression of these artists there is more to associate with the early spring of mediæval art. The three artists concerned, Eric Ravilious, Douglas Percy Bliss, and Edward Bawden, have each their own outlook, and work through the teratment which may best express it. In either case it is all very simple, and the picture is regarded, at no loss to the quality of nature, which should inform a work of art. Nos. 7, 9, 10, among others in various ways attractive, should be noticed. The realism is in the vision of what the artist sees, which is the proper field of craftsmanship, and gives that lyrical quality, where observation and treatment are harmoniously embodied. This is in itself a challenge to those who expect of the artist to record what they see in nature, which the picture postcard will do better for them.

In the water colours by Percy Bliss, there is real beauty. These Irish scenes impress us with a certain intimacy, which charms us into sharing the delight in that which is to the artist so delightful. Nos. 19, 20, 26, 28, 29 are perhaps among the best examples. Given the opportunity we can imagine this artist succeeding well in the larger field of mural decoration, the simple treatment and restrained colour and composition being well suited to it. Mr. Edward Bawden is more unequal, and there is less to commend in the drawings on white paper than in his etchings and design work. The latter "Drawings of Imaginary Architecture," Nos. 63, 65 and 67, are as charming as anything in the exhibition. Full of fancy and of a quaintly conceived richness of detail they are worth careful examination. This artist's work in publicity directions will be recalled.

This very attractive exhibition, full of youth and seriousness, should be of interest to many, and visited by those who can appreciate the charm of drawings showing seriousness and fine feeling for beauty.

New Bournemouth Cinema.

Messrs. Seal and Hardy, of Bournemouth, have been appointed architects for the proposed erection of a cinema by the Provincial Cinematograph Theatres, Ltd., in the Westover-road, close by the Westover Cinema and Ballroom. It is stated that the new building will include a stage adequate to any theatrical production, and will be built to seat 2,500 people. The cost is estimated at £150,000.

ARCHITECTURE OF TO-DAY

In the course of an address on this subject to the Southend Society of Architects, Mr. Howard Robertson, F.R.I.B.A., S.A.D.G., Principal of the Architectural Association Schools, said the history of architecture was a series of actions and reactions, reflecting social movements and the development of the religious and moral sense. Grecian artistry and purity yielded to Roman magnificence, and to the subordination of the individual in architecture; and then Mediævalism brought a powerful reaction towards independence and energetic individualism. This, in turn, yielded to the intellectual sway of the Renaissance, and then, in turn, the various phases of past history re-echoed themselves in revivals and free movements, passing through the Victorian age of material prosperity and culminating in the chaos of which in another direction the Great War was the expression.

To-day was the period of reorganisation. Architecture strove to-day to free itself from habit, though not from tradition. It strove to develop logically, as tradition was logical, for tradition was the background of evolution. A return to fundamentals, the full utilisation of our mechanical and engineering resources, and the logical solution of each individual building problem were typically present-day aims. The marshalling of resources, the thorough examination of the conditions which we built to meet, required a talent for organisation. The best architects to-day were in the highest sense organisers, for architecture consisted to a large extent in the proper organisation of the materials of building, such as bricks and stone and concrete, and the elements of buildings, such as doors, windows, roofs, wall surfaces, and their assembling for a purpose of practical use and civic beauty.

The architect's biggest task in organising was in town planning, where his elements were buildings and blocks of buildings. Few towns were well organised in their parts; the effort of the town planner was only just beginning. Town planning sprang from necessity, as was shown by the effort to control and plan such cities of apparent chaos as New York. In London, streets like Kingsway had been consciously schemed as part of a general plan. Even our traffic merry-go-rounds represented organisation and logic applied to traffic planning.

In the form of individual buildings, there was a reaction towards order and simplicity. In the reaction against cheap and shoddy ornamentation, the machine had been looked to as an inspiration. The great metal bridges and the metal roofs of vast machinery halls were as expressive in their way as were the vaults of a great Gothic cathedral. This clean and spare architecture of structure had lightness and beauty of form. Architects were learning to use their structure as an element of beauty and not to attempt disguises. Some of the recent factories in France and Germany and this country showed the nobility of bare structures. Even the great Canadian grain silos had an impressive beauty of form. But structure alone was insufficient. Human beings required the element of humanity in their surroundings, something to gladden the heart and eye. That was why decoration and ornament would never die out, and why the cubist experiments of the Continent could not be considered as at all final as an architectural expression.

In France and Germany, and other parts of the Continent, there were being built houses of steel and concrete with metal doors and windows, and an interior finish like that of a modern hospital. The aim was two-fold: To build economically, with standard units; and to provide a maximum of light and air, hygiene and ease of upkeep. These houses did not correspond to English ideals, but they represented an enormous advance, both practically and æsthetically, over the previous poor man's housing.

In England the standard of housing had always been much higher than on the Continent, so the same need for a radical departure had not been felt. But we had still much to learn in economic building, in preparing as much as possible of the house under cover in the shop and yard, and only using labour on the site for rapid assembling. In England we were pre-eminent in housing, and the standard of our public buildings and big office blocks was improving. But our street architecture was often very poor, and commerce was still loth to erect refined and distinguished shops, restaurants and cinemas, largely because the popular taste was not educated to it, and the majority of people still preferred gilt on their gingerbread. The only fundamental remedy was to educate the public taste, and to improve continually the training of architects. The trouble here lay, however, with those so-called architects who had no training in the art of architecture, but who were able to put up buildings—which was one of the grave disadvantages of an unguarded profession.

One of our great architectural opportunities lay with the new arterial roads, which were unfortunately being marred by ramshackle speculative building, instead of being lined with houses considered as a scheme, with broad simple fronts and continuous gardens fit to harmonise with these fine sweeps of boulevard. America did differently, and her suburban architecture was of a finer quality than ours.

(The lecturer showed numerous slides from England, the United States and the Continent, illustrating examples of bad buildings, and showing the cause of the reaction towards modern simplicity, including some of the fine examples of architectural engineering which showed the possibility of modern materials and structure.)

THE CORNHILL SUBSIDENCE

The Corporation of the City of London says the *Times*) met on Thursday, September 22, for the first time since the vacation, under the Presidency of the Lord Mayor.

Mr. H. Dignam Baily, Chairman of the Streets Committee, replying to questions as to the present state of affairs in Cornhill, said that if the restoration of the roadway proceeded at its present rate it was likely that half the roadway would be open to public use in four or five weeks' time. Referring to the accident, he said that Lloyds Bank, in the course of their rebuilding scheme, prepared to take their building a considerable depth below the surface in order to provide basements. They went down as much as 50 ft. The premises of the Commercial Union Assurance Company did not go down so far and had to be underpinned. The roadway was kept up by timbering. That was the position on August 6. The piers underpinning the Commercial Union's building gave way, part of the structure fell, and in its fall the stone, brick, and steel work knocked against the timbering holding up the side of the road, and the earth slid down into the pit. There was a brick sewer under the road, and, being unsupported, it collapsed and added to the confusion. There were various mains—gas and water—which were in a similar condition, and underneath in the cavity were festoons of Post Office and other cables. The City Engineer (Mr. Finch) dammed up the two ends of the sewer and other precautions were taken. The concrete foundations of the roadway held up in a remarkable way. Dangerous structure notices were served on Lloyds Bank and the Commercial Union in the ordinary way after the subsidence. The Town Clerk wrote a letter to say that the Corporation would hold Lloyds Bank entirely responsible for all the damage that was done and would be done, and a similar letter was sent to the Commercial Union. No harm happened to the Royal Exchange, and the steps which had been taken by the contractors to Lloyds Bank had made the roadway temporarily secure. A scheme which Lloyds Bank had made in consultation with their experts provided for the proper restoration of the roadway, and that had been approved by the engineer and the Streets Committee. Throughout the Corporation had taken the view, which they thought the correct one, that Lloyds Bank were entirely responsible for the unfortunate subsidence.

Sir William H. Thomas, intervening, expressed the view that the matter was being carried too far. Litigation was pending and he protested against anything further being said.

Mr. Baily: I am only expressing my opinion that in the end the bank will carry out its responsibilities.

OBITUARY

Mr. M. H. Young, F.S.I.

We regret to record the death, on August 31, at the hospital of St. John and St. Elizabeth, Grove End-road, of Mr. Morgan Henry Young, F.S.I., in his 75th year. Mr. Young was educated at Tonbridge School, and was articled to the late Mr. Sidney Young, well-known quantity surveyor. He was concerned as quantity surveyor for most of the hospital work carried out by his brother, Mr. Keith D. Young, F.R.I.B.A., and his partner the late Henry Hall. Amongst these were the Derbyshire Royal Infirmary; extensive reconstruction and additions to the Middlesex Hospital, including a convalescent home at Clacton-on-Sea; reconstruction and additions to the London Fever Hospital, the Royal Eye Hospital, the Royal London Ophthalmic Hospital, the Hospital for Epilepsy and Paralysis, Chelsea Hospital for Women, and the British Hospital for Mothers and Babies with many others; for the late Sir William Emerson he took out quantities for the Queen Victoria Memorial at Calcutta, besides other works, and he was associated with several other well-known architects. He was for many years an active member of the Court of the Armourers and Brasiers Commpany and thrice served the office of Master: was manager of the Schools of St. Augustine's Kilburn, and Chairman of the Committee of the St. Monica's Home Hospital for Sick Children at Brondesbury.

Traffic Congestion at Exeter.

A scheme for dealing with traffic congestion in the streets of Exeter, involving an expenditure of £350,000, came before the City Council for the third time on Tuesday night. The question was under discussion by the council last week, and when the meeting was adjourned a motion to reject the scheme had been moved, and also an amendment to defer it till next June.

Mr. Vincent Thompson resumed the discussion on Tuesday night on the amendment. He said that the city was not pledged to the expenditure of one farthing, and that at every stage of the execution of the scheme the council would be opportunity for review. He warned the council that the Ministry of Transport were anxious to carry their pet arterial road—the Bath-road—through Exeter to Plymouth, and if the council did not proceed with the proposed scheme, or some similar one, the Ministry would be driven to construct the deviation. That would cost Exeter nothing, but it would also bring in nothing. Mr. F. E. Cottey contended that a vote for the amendment would virtually be a vote in favour of the scheme as it stood.

The amendment was defeated by 36 votes to 23, as was a further amendment that the original resolution should be rescinded and that the scheme should be referred back for consideration and report. Following further discussion, the motion for the rejection of the scheme was carried by 49 votes to eight. The scheme is therefore dropped.

THE LONDON BUILDING ACTS AND THEIR APPLICATION—XXIX

By H. V. MILNES EMERSON, A.R.I.B.A.

PART XIV.—BY-LAWS.

Section 164.—(1) Subject to the provision this Act the Council may make such by-rs not repugnant or contrary to the pro-ions of this Act as they may think ex-dient for the better carrying into effect the jects and powers of this Act with respect the following matters :—

The regulations of the plans, level, width, face and inclination of new streets and for gulating the plans and level of sites for w buildings.

Note.—The by-laws relating to new streets re given when dealing with Part II., Sec-ns 6 to 21 inclusive; Part IV., Sections 32 38 inclusive. Section 49 limits the heights buildings in certain cases in relation to e width of the street. Section 199 relates obstructions in streets. Section 213 relates powers of local authorities with respect the paving of new streets.

The Metropolis Management Act, 1855, Sec-n 105, provides for paving new streets as lows :—In case the owners of the houses eming the greater part of any new street d out or made or hereafter to be laid out made, which is not paved to the satisfac-n of the vestry or district board of the rish. . . . or if the vestry or board deem necessary that the same shall be so paved en and in either of such cases such vestry board shall well and sufficiently pave the me, either throughout the whole breadth of e carriageway and footpaths thereof, or any rt of such part of such breadth, and from me to time keep such pavement in good and fficient repair. The remaining part of the ction deals with the liability of owners to y their share of the cost of making up the ads and footpaths.

The Metropolis Management Amendment t, 1862, gives power under Section 73 to e local authorities to pave, improve and gulate the streets of the Metropolis and an extension of The General Paving Metropolis) Act, 1817, and the Metropolis nagement Act, 1855. Section 77 of the 62 Act is as follows :—Where any vestry . have paved or be about to pave any new eet the owners of the land bounding or utting on such street shall be liable to con-bute to the expenses or estimated expenses paving the same as well as the owners of uses therein. . . . and any such costs or penses, including the cost of paving at the nts of intersection of streets, and all other idental costs and charges shall be appor-ned by the vestry or board, and shall be verable either before the work shall be mmenced, or during its progress, or after completion; and it shall be lawful for the try or district board at their discretion to ept payment of the amount apportioned or ged in respect of each house or premises re instalments spread over a period not eeding 20 years, and any such amount l be recoverable from the present or any re owner of the premises in a summary ner, etc.

The Metropolis Management Act, 1862, endment Act, 1890, Section 1 gives power he local authorities to pave footway and recover the cost of same from the owners he houses or land bounding or abutting on road or street in which such footway is te.

Note.—It will be seen that the local autho-s and not the L.C.C. have the power to rmine how and with what materials the way and footways shall be made. This s that the decision practically rests with Borough Engineer or Road Surveyor, and e is nothing in the various Acts dealing with this matter restricting the making or cost of new roads. Hence it is possible to find in adjoining localities different standards for road making, one reasonable in construction and costs, the other extravagant and costly in construction.

The cost of new roads and paving in London varies from 30s. to 50s. or more per foot run and the payment by the owners to the local authorities can be on demand or by extended payments, the latter generally over a period of five years, although up to 20 years is provided in the Act. It has been felt that the heavy road charges press unduly upon the owners of new property and it has been suggested that when the London Building Act is revised the charge to the owners of property on new roads should not exceed £1 per foot frontage and 10s. per foot return frontage to corner property. Another suggestion in dealing with return frontage is to charge an amount for the return frontage equal to the average frontage of the houses in that street; thus if the average frontage per house is 30 ft. then the return frontage of the corner house would be charged at 30 feet full rate and no more. The method of apportionment cannot be questioned before the magistrate in proceedings to enforce payment of the amount.—Stotesbury *v.* The Vestry of St. Giles', Camberwell, 59, L.T. 473.

Under Section 77 of the 1855 Act existing or ancient highways may become new streets within the meaning of this section. The Vestry of St. Giles', Camberwell *v.* Crystal Palace Co. (1892), 66 L.T. 840.)

The interpretation of the term street will be found under section 250 of the Metropolis Management Act, 1855, and the term new street is defined in Section 112 of the Metropolis Management Amendment Act, 1862, as follows :—"New Street" shall apply to and include all streets hereinafter to be formed or laid out, and a part of any such street, and also all streets, the maintenance of the paving and roadway whereof had not, previously to the passing of this Act, been taken into charge and assumed by the authorities, etc.

ARCHITECTS' & BUILDERS' INQUIRY BUREAU

We are glad to give questions and answers, but cannot accept responsibility for contributed replies, especially on legal matters.

May we appeal to our correspondents to submit their queries on paper of a size easily filed, and written as legibly as possible, or, better still, in typewriting?—Ed.

Growth in Lime.

[Reply to "O. P. Q.," September 23.]

Sir,—If the lime-whited walls vegetate, it is a sign that they are more or less permanently damp, and the cause should be traced and corrected. If this is the porous character of the walling, it would probably be found effective if the lime were scraped off and two coats of white cement wash substituted.

Cureit.

Floor Surface for Printing Works.

[Reply to "New Building," September 23.]

Sir,—A lasting floor is granolithic, laid to a good thickness of at least 1½ in. by a good specialist firm. It is dustless and practically everlasting, and can be swilled down in a way that few other floors will stand.

Old-Fashioned.

Loan for Water Scheme.

Sir,—A local Public Water Supply Committee are desirous of borrowing a sum to carry out a scheme in connection with the construction of a new water reservoir. I am in doubt as to which body is likely to grant them such a loan, so would be glad if you would kindly assist me in the matter with regard to the following queries :—

(a) Would the Ministry of Health grant them a loan for this purpose?

(b) Would the Public Works Commissioners grant the loan?

(c) If neither of the above bodies will grant the loan, to whom should I advise them to apply?

Aqua.

[To give a proper reply to the question asked, it must first be made clear what is the nature of the undertaking. Is the public water supply the property of the local authority, or is it owned by a public or private company? Whichever it is, presumably powers already exist for the undertaking and the construction of a new water reservoir. If it is the local authority that has the powers, then, in general, it can borrow the amount of capital to be spent either by mortgage or by loan under the Public Works Loans Act, 1925, raised by debentures, debenture stock, or annuity certificates, or by stock issued under a private Act or other statutes, and the loan may be obtained at a fixed rate of interest from the Public Works Loan Commissioners under the Act of 1925, repayment being on the annuity system, or the sinking or redemption fund system, over a period of 30 years, sanction of the loan first being obtained from the Ministry of Health. If a company, then it may borrow in such manner as it thinks fit—for instance, by a legal mortgage of any of its property, or by equitable mortgage, as by deposit of title deeds; or again, by a floating charge on the whole undertaking, or by bonds, or promissory notes, or by debenture or debenture stock. It may also borrow by overdrawing its banking account. For such a small amount, no doubt 5 per cent. interest would be charged.—Ed.]

Building Line.

Sir,—On an estate on which I am proposing to build, the building line in the street is determined in an unusual manner. At either end is a completed house, one of which is not fronted parallel with the frontage. The building line is taken as the line joining the frontage of the one house with the corner of the other farthest from the road, so that actually the remainder of this completed house projects in front of the building line. It so happens that it is greatly to our advantage to bring our new building out to a revised line joining the nearer corner of the end house. Is there any likelihood of pressure being brought to bear to allow this? The roads are not yet taken over by the local authority and are being administered by the estate management.

Architect.

Nuisance Caused by Spring: Question of Responsibility.

Sir,—In a London suburb there has been for the last five or six weeks a flow of water from a garden across the public footway (an admitted nuisance). It was at first thought to be caused by a burst water pipe, for which the tenant would be responsible, but it was ascertained that there was no water pipe near that part and that it arose from a spring which (owing to the exceptional rain recently) had broken out on the surface. Who is responsible to remedy the nuisance, and what is the simplest and most effective way?

G.

Elm Boarding.

Sir,—I have recently seen some floors laid with elm boards in very wide widths. They looked exceedingly handsome, but had opened considerably. Is this inevitable with this material, or is it possible to obtain sufficiently seasoned stocks to avoid the trouble?

Longing.

LEGAL SECTION

NOTES ON CURRENT CASES

Liability of Landlords under the Housing Act.

In our issue for December 31 last we briefly noted the case of Morgan *v.* Liverpool Corporation under the above heading, but explained that the case could not be fully considered until a fuller report appeared in the Law Reports. The case has only recently been reported in August (1927, 2 K.B. 131), and we have on former occasions ventured to comment on the delay in reporting cases of such importance. The facts of the case are simple, but they raised some issues upon which agreement could not be arrived at in the Court of Appeal.

The plaintiff was tenant of a house within the Housing Act owned by the defendant Corporation, the standard rent of which was 8s. 0d. a week, but the rent had been increased to 8s. 1d. The plaintiff, when opening the upper portion of a window, had sustained injuries by the breaking of a sash-cord which had caused the window-frame to slip down and it had caught and injured his hand and he had suffered some injury to his eye from the glass which had broken in the fall. He claimed damages and based his claim mainly upon a breach of the covenants implied by Section 1 of the Housing Act, 1925, which now represents Sections 14 and 15 of the Housing Act, 1909. That section provides: "In any contract for letting for habitation a dwelling-house at a rent not exceeding: (*a*) in the case of a house situate in the administrative county of London £40; in the case of a house situate elsewhere £26; there shall, notwithstanding any stipulation to the contrary, be implied a condition that the house is at the commencement of the tenancy, and an undertaking that the house will be kept by the landlord during the tenancy, in all respects reasonably fit for human habitation. . . ."

It was alleged that there had been a breach of a covenant for quiet enjoyment and of the covenants implied by this section. The defendants contended that there had been no breach of the implied covenants, and secondly that notice by the tenant to the landlord of the defect was a condition precedent to the liability of the landlord. We will deal with this last point first, as on that point the Court of Appeal was unanimous and it really disposed of the action.

Two doubtful points have arisen in connection with this question of notice. In the first place, it has been said it has no application under the Housing Act, because by section 1, subsection (2), the landlord has power, on giving 24 hours' notice in writing to the tenant or occupier, to enter the premises and view their state and condition; and secondly, it has been questioned whether notice must be given where the defect is latent. In Fisher *v.* Walters (1926, 2 K.B. 315; *The Builder*, September 24, 1926), a Divisional Court recently held, under the Housing Act, that where the defect was latent notice need not be given. The majority of the Court of Appeal have now decided that notice of the defect to the landlord is necessary, whether the defect is latent or patent, despite the right of entry to view the premises conferred by the Act; thus the case of Fisher *v.* Walters must be taken to have been overruled.

The Master of the Rolls expressed some doubt upon the point whether the fact that the defect was latent would afford an excuse for not giving notice, but considered that this question did not arise in this case, as he doubted whether the defect was latent; but he referred to the decision of the House of Lords in Murphy *v.* Hurley (1922, 1 A.C. 369), where it was pointed out that the repairs of dwelling houses, however frequently required, are still casual and occasional, and that in the case of casual repairs it would throw an unreasonable burden on the landlord if he had to discover them. There is now a definite finding of the Court of Appeal on the two points which have caused doubts in the past, and therefore this is a very important decision to be noted by landlords and tenants.

This decision as to the necessity of notice really concluded the case, but the Court also considered the other points raised in it, although, as Lord Justice Atkin observed, the opinions expressed on those points and upon which the Court as a whole were not agreed, would be little more than *obiter dicta*, and not authoritative. It was argued that this defect did not render the house not reasonably fit for human habitation within section 1 of the Housing Act, 1925.

The Master of the Rolls held that the words "in all respects" contained in the section must be read with the qualification "reasonably fit," and the breaking of a window cord, an incident which must occur in every kind of house, by whatever class it is inhabited, afforded no test or proof by which the house could be held unfit for human habitation.

Lord Justice Atkin held that it was a question of fact, to be determined in each case, but the class of house and the people inhabiting it must be regarded. The test he suggested was that if the state of repair of a house is such that by ordinary user damage may naturally be caused to the occupier, either in respect of personal injury to life or limb or injury to health, then the house is not in all respects fit for human habitation, and, applying this test, he thought the present case fell within it. He also drew attention to the fact that in this case the tenant was prohibited from doing slight repairs himself because of regulations prescribing that nails must not be driven into woodwork.

Lord Justice Lawrence emphatically expressed the opinion that the defective window-cord did not render the house unfit for human habitation under the Housing Act. On this point we therefore find that the majority in the Court of Appeal were of opinion that this defect was not such as not to leave the house in all respects reasonably fit for human habitation within the section.

A further point raised in the case was that as the rent had been increased under the Rent Restriction Acts, section 2, subsection (5), of the Rent Act, 1920, imposed a statutory obligation on the landlord to keep the premises in "good and tenantable repair," which is a higher and more onerous obligation than merely to keep a house fit for human habitation. On this point the Master of the Rolls and Lord Justice Atkin were of opinion that section 2, subsection (5), imposed no such statutory liability as was contended for in this case, whilst Lord Justice Lawrence expressed the contrary opinion but intimated that if the fate of the appeal had depended upon this point he would have desired further time to consider it.

Section 2, subsection (1) (*d*), of the Rent Act, 1920, allows a further addition to be made to rent (1) where the landlord is responsible for the whole of the repairs; or (2) where he is responsible for part only; but in the latter case the amount must be agreed, or be determined by the County Court to be "fair and reasonable," and subsection (5), as the Master of the Rolls pointed out, interprets this subsection by showing what repairs the landlord is "responsible for" and what is intended by reasonable repairs. Subsection (5) is as follows: "For the purposes of this section the expression 'repairs' means any repairs required for the purpose of keeping premises in good and tenantable repair, and any premises in such a state shall be deemed to be in a reasonable state of repair, and the landlord shall be deemed to be responsible for any repairs for which the tenant is under no express liability." By section 5 of the Rent Act, 1923, where a certificate has been obtained from the sanitary authority that the house "is not in a reasonable state of repair," that affords a defence to any claim for increased rent.

The converse, so to speak, of this problem was considered by a Divisional Court in the case Jones *v.* Geen (1925, 1 K.B. 659; *The Builder*, February 27, 1925). There, in the case of a house within the Housing Acts, the landlord had increased the rent by the whole 25 per cent., on the basis that the landlord was responsible for the whole of the repairs and the tenant was claiming back rent paid on this basis. There was an agreement in that case under which the premises were let for the term of one year, the tenant undertaking "to keep and leave the said premises in good and tenantable repair, fair wear and tear excepted," and the Court had to consider the operation of the Housing Acts in connection with this agreement. The Court considered whether the words in the then Housing Acts, "any agreement to the contrary notwithstanding," meant that the agreement should be entirely ignored and only the obligation implied by the statutes be applied, or whether any effect should still be given to the words contained in the agreement, and came to the conclusion that there was a marked difference between the statutory obligation to keep the house "in all respects fit for human habitation" and the contractual obligation to keep it in "good and tenantable repair, fair wear and tear excepted," and thus there were repairs which would fall upon the tenant, and the rent could not be increased on the basis that the landlord was responsible for the whole of the repairs.

The Court, however, in that case recognised that the Housing Acts and the Rent Acts were legislation of very different character aimed at very different evils and applying to houses of very different standard. The majority in the Court of Appeal took the same view, as they held that the Rent Acts were passed *alio intuito*, and did not, as do the Housing Acts, imply terms altering the relation between landlord and tenant.

Wall Paintings in Eton College Chapel.

During the holidays Professor E. W. Tristram, of the Royal College of Arts, Kensington, has carried out a restoration of the obliterated portion of the famous wall paintings in Eton College Chapel. The obliteration was due to the erection of an organ loft in the year 1700, when a section of the wall was covered with oil paint. This paint, says *The Times*, was removed three or four years ago, and the old designs were revealed, but in a very damaged condition. Professor Tristram's work has been extraordinarily successful, and there has been no interference with the remains of the original painting.

The fourth and last of the tapestries illustrating the story of St. George has been hung in the Lower Chapel, and the series is now complete. The tapestry, designed by Lucy Chilston and executed at the Merton Abbey Works, is part of the Eton War Memorial. The first of the series illustrates the education of St. George; the second, his fight with the dragon; the third, his martyrdom and entry into Paradise; and the fourth shows him as Patron of England.

HEATING AND VENTILATION

THE PROGRESS OF GAS HEATING

The issue of *The Builder* dated Septem- 24th, 1926, contained an article, itled "Gas Heating and Smoke Abate- nt," which set out some details regarding gas industry's contribution towards the utron of the smoke problem—the curse of cities and towns. It is pertinent at this e of the year, when we are on the verge the autumn and winter months, to con- er the further progress which has been r is being—made in the campaign for the atement of smoke and by gas heating, the ter viewed not only in the light of its ue towards attaining a more healthful, aner and brighter atmosphere, but also garded as a modern method of warming r homes without drudgery, a function ich is of no less importance than its okelessness, and which it is performing an ever-increasing degree

The smoke abatement cause, which has en strongly advocated by medical men and ner scientists for a number of years, has ade notable progress during the past twelve nths, as it has now attained the dignity being the subject of an Act of Parlia- nt. Mr. Neville Chamberlain, Minister of alth, on July 1st this year broadcast from e Birmingham Studio of the B.B.C. an dress on "Cleaner Cities." He then an- unced that on that day there came into eration a new Act, entitled "The Public alth (Smoke Abatement) Act," which was tended to help to reduce the terrible waste fuel, the destruction of plant life and the iling of materials, which have constantly be washed. He pointed out that the law d been strengthened in several respects garding factory premises, but put great ress upon the fact that the Act does not ake any provision for prohibiting the ission of smoke from the domestic mney, although, according to a Com- ttee which investigated the subject, house- ld fires are responsible for five times as ch smoke as factories. He further men- ned, regarding new houses, that they are eady largely being fitted with non-smoke- oducing apparatus, and that 75 per cent. of those being built by local authorities are fitted with gas cookers.

In October or November next a Smoke Abatement Conference, which will be held in London under Mr. Neville Chamberlain's chairmanship, will be attended by representatives of Metropolitan local authorities and Government Departments. The Conference will be mainly devoted to a consideration of the above-mentioned Anti-Smoke Act, with a view to securing uniformity of administration by public authorities. The question of the prevention or reduction of domestic smoke, which is not yet the subject of legislation, will, however, probably be raised, having regard to the well-known desire of the Ministry of Health that local councils and housing authorities should do all in their power to encourage the use of gas installations, and other forms of smokeless heating in new building schemes which are carried out either by municipal or private enterprise.

1.—New Health Society's Premises: Old Coal Range before conversion.

Mr. L. W. Chubb, Secretary of the Coal Smoke Abatement Society—whose premises are heated by gas fires—at a recent interview with a Press representative on the subject of the Conference, stated that its chief purpose will be to settle the question of what is and what is not "avoidable smoke." He also said: "We must work within the four corners of the new Act first. Later on we shall resume our propaganda for the mitigation of the domestic smoke nuisance. To this end the society proposes to hold meetings and to issue appropriate literature to the public."

The Domestic Chimney.

The fact that the domestic chimney is the greatest culprit as regards the emission of smoke has been realised for some years by those who lead the gas industry. With a view to meeting satisfactorily and economically the modern demand for smokeless cooking, water heating and heating appliances, the leaders of the gas industry have, in conjunction with the gas-stove manufacturers, carried out a great deal of research work, as a result of which scientifically constructed and hygienic apparatus has been—and is now being—installed in hundreds of thousands of houses in all parts of the kingdom. Gas-fired apparatus is also being increasingly installed in factories, and a great number of old-fashioned appliances have been converted for use with gaseous fuel. The new Act will, of course, cause a rapid extension in the latter direction.

Builders and Gas Apparatus.

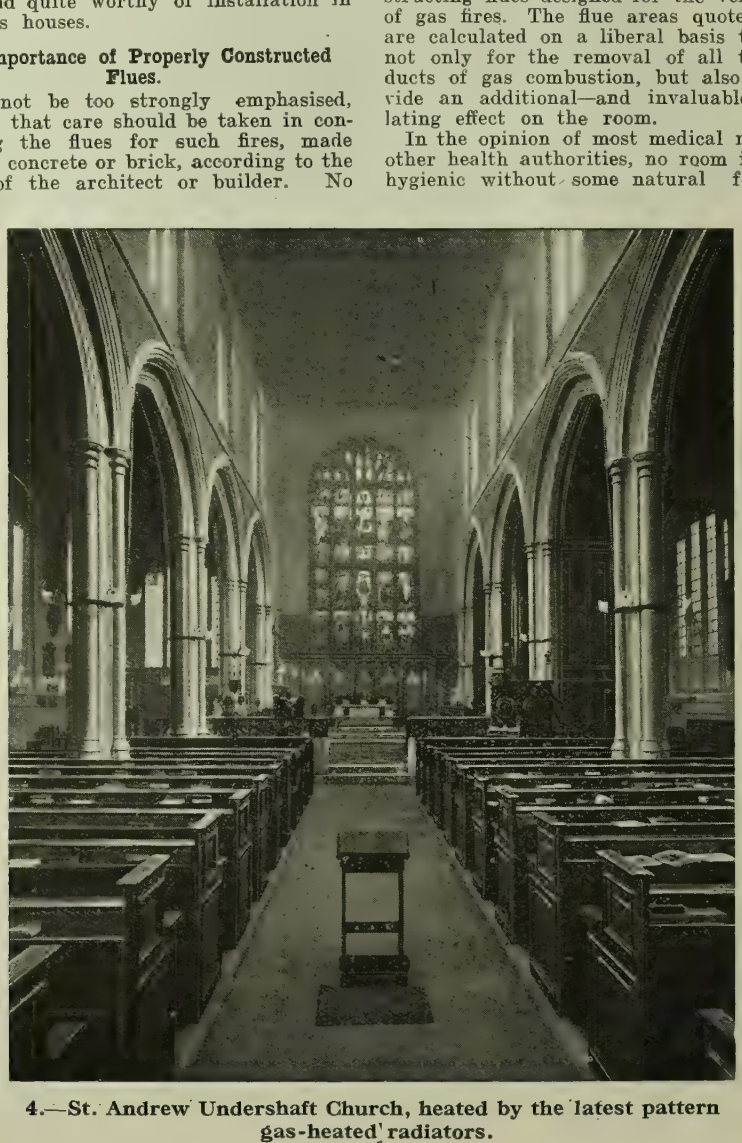
As some evidence of the movement towards smokeless, labour-saving domestic appliances, it may be pointed out that quite

—New Health Society's Premises; Old Coal Range shown in Fig. 1 converted with modern Gas Fire and Manu-Marble backing.

contrary to the action usually taken in the past, builders are now arranging with local gas undertakings not only to instal a complete piping system throughout the premises which they are erecting, but are also purchasing and installing gas cooking stoves, gas coppers, gas water heaters and "built-in" gas fire mantel registers as integral parts of their houses or flats.

Before setting out some recent interesting installations, including several new features in connection with the use of gas for heating, it may be mentioned that *The Builder* was the first technical journal to draw attention to "built-in" gas fires, fitted to what—for the want of a better name—is known as the economy flue.

First specifically referred to in our issue for September 24th, 1915, and again on July 4th, 1919, the principle has spread by leaps and bounds. As at first applied, it took the form of a fire especially designed to fit against a tiled or other form of backing, with a prepared mantel on a wall which contained a flue 9 in. by 3 in. or 12 in. by 3 in., according to the size of the fire, but in later years it has been constructed in the mantel register form, finally combining gas fire, mantel, and hearth in one piece of apparatus, which may readily be fixed to the wall by two small lugs. Again, in its first form it was only made of small heating capacity, and in one simple plain design, suitable for the small parlours and bedrooms of houses such as those erected by municipalities. The system has been so extensively adopted that the gas-stove makers have now provided a very wide range of sizes and designs of gas-fire mantel registers, some of which are in imitation tiling and quite worthy of installation in good-class houses.



The Importance of Properly Constructed Flues.

It cannot be too strongly emphasised, however, that care should be taken in constructing the flues for such fires, made either in concrete or brick, according to the wishes of the architect or builder. No apology is necessary, therefore, for setting out some recommendations and details regarding the best methods of constructing flues designed for the ventilation of gas fires. The flue areas quoted below are calculated on a liberal basis to allow not only for the removal of all the products of gas combustion, but also to provide an additional—and invaluable—ventilating effect on the room.

In the opinion of most medical men and other health authorities, no room is really hygienic without some natural form of ventilation, which function is satisfactor carried out by a properly constructed g fire flue. "No room without a flu should be the slogan of all those who va the future health of the community, a it would be worse than useless, and inde ironical, to improve the outer atmospn by instituting smokeless forms of heati and other domestic services, whilst consi to construct flues or ventilating shafts the rooms of our houses. An air-bri (instead of a flue) in a bedroom w practically always acts as an intake a rarely—if ever—as an extractor. It is delusion and a snare; and as, moreov it is usually the cause of a draught cold air coming into the room, it is soon or later likely to be stuffed up by t occupant, to the ultimate detriment of h health.

3.—Surgery in Wellington College, Berks, showing gas fire fitted to tiled backing, with pedestal burner for heating water.

4.—St. Andrew Undershaft Church, heated by the latest pattern gas-heated radiators.

Some details and recommendations garding the construction of gas-fire flu including the minimum permissible f areas for each size of gas fire, and t approximate floor areas of the apartme for which they are suitable, are giv below:—

Number of Radiants.	Size of Gas Fire Front.	Minimum *permissible* Flue area.	Approx mate flo area o rooms
5 & 6	8 in.	20 sq. ins.	100 sq.
7 & 8	10 in.	24 „	150 „
9	13 in.	30 „	200 „
10	14 in.	36 „	225 „

The cavity of a hollow wall must not used as a flue for gas fires unless a s able shaft is properly constructed ther If smoothly finished, the size of the for the smallest gas fire need not exc 20 sq. in. in area. All flues for "built- gas fires should discharge into the o air above the ridge of the roof. Each fire must have its own independent which throughout its entire length shall be connected with, or run into, any o flue. The flue may be constructed in ei brick or concrete block; parging is necessary, but the interior should be c fully trowelled.

The gas fire should not discharge i mediately into the flue shaft, but an o ing rather greater than the full widt the fire outlet should be gradually abruptly) gathered over in the same

ner as is done in the case of a coal fire, providing a products-of-combustion chamber above the gas-fire outlet corresponding with the smoke chamber which is always constructed above a coal fire.

Some Examples of Comprehensive Gas Installations.

We give hereunder details of some comprehensive installations of gas-fired apparatus in various parts of the country. These are only examples of many similar installations which could be quoted. In no fewer than 9,219 out of 9,868 new houses already built in Glasgow under local authority or private housing schemes, gas cookers, gas wash coppers, and two gas fires have been installed in each house. The above figures relate to houses already built. A further 6,909 houses are, however, now in course of construction. Gas cookers and wash coppers will be used in 6,865 of these, and some gas fires will also be fixed in each, though at least one solid fuel grate will always be provided. It will thus be seen that of the 16,777 tenants in houses constructed or in course of construction in Glasgow, no fewer than 16,084 (or over 95 per cent.) will use gas for cooking, for heating water for washing purposes (and in many cases for baths), and also for heating rooms which are intermittently occupied.

In Liverpool, where about 9,000 new houses have already been built under housing schemes, and the construction of a further 4,000 is well in hand, gas is being used for cooking in 98 per cent. of the houses, and in over 90 per cent. gas-fired wash coppers are also being installed. Some 12,000 gas fires have already been fixed in the completed houses, and in each of those not yet completed there will be fixed either two or three gas fires, according to the "class" of the house. There will soon be at least 20,000 gas fires in use in houses built under the housing schemes in this city.

The Gorgie Housing Scheme, Edinburgh, when completed, will consist of 510 flats at rentals of from £24 to £28 per annum, excluding taxes. Each building has three floors and contains six or twelve flats. The flats have two or three bedrooms, a living room, a scullery, and a bathroom. Gas fires are being fixed in every bedroom and in each scullery a gas copper and a gas cooker are being fitted.

It is quite impossible to give comprehensive and detailed statistics relating to the many housing schemes which have been completed, or are in course of completion in London. In the area of the largest London gas undertaking, however, the London County Council has in hand schemes involving the construction of some 28,500 houses. About one-third of these houses are already completed and occupied. Gas is to be used for cooking in almost every one of the London County Council houses, and some thousands of gas water heaters and gas fires are being installed ready for the tenants' use.

A few instances of what is being done by private enterprise may also be given. The Foundation Co., Ltd., are erecting approximately 1,500 houses on various estates at Southall, Harrow, Acton and Ealing, and, in addition to having gas supplies run throughout, are installing a gas cooker and two combined gas fire mantel registers in each house ready for the tenant's use. Mr. George Willson, of Halifax, whose architect is Mr. W. A. Ross, A.R.I.B.A., is erecting over 200 houses at Egham, and is equipping each house with lighting fittings, a gas cooker, a gas copper and two gas fire mantel registers. Mr. C. B. Heygate is erecting about 200 houses at Edgware, and is actually installing five or six gas fires, a gas cooker and a coke boiler in every house. Messrs. R. Costain and Son are erecting over 1,200 houses on the Brentwater Estate, Willesden, and are installing a gas copper, water heater and two gas fire mantel registers in each house. Mr. Frank Perry, whose architect is Mr. H. H. R. Ward, is erecting over 250 houses at Kingsbury, and is installing a gas cooker, copper, geyser, and two gas fire mantel registers in each house.

Gas-fired Boilers for Central Heating.

From time to time reference has been made in *The Builder* to the use of gas boilers for central heating plants. A number of such installations continue to be carried out, amongst which may specially be mentioned those for the heating of small suites of offices and such premises as branch banks. The coke-fired boiler is generally found to be the most satisfactory and economical appliance for central heating work in large office premises—such as the head offices of banks, insurance companies, and so on. Wherever fuel storage space is not available, however, or if there is any difficulty in providing the necessary labour for stoking, it has been found that the gas-fired boiler is preferable, despite the fact that the fuel cost is higher for a given service. For heating plants of quite appreciable magnitude, powerful and highly efficient gas-fired boilers are now obtainable made in a number of sizes to meet varying demands. These boilers require little or no attention, as their gas supply is automatically regulated to maintain the temperature required, the consumption of gas being thus reduced as soon as the temperature rises above a pre-determined point.

For the heating of small suites of offices and branch banks gaseous fuel fired boilers are appropriate for the following reasons. The heating equipment required for a branch bank of average size consists of no more than four to six radiators (with a total heating surface of, say, about 80 to 120 square feet) in the public office, and one radiator in the manager's room, the latter being sometimes supplemented by a radiant gas fire. The installation is thus quite a small one. The basement is generally required for the strong room, and for providing lavatory accommodation for the bank staff, and it is difficult, therefore, to set aside sufficient space for the storage of solid fuel. In such establishments there may be no porter or resident caretaker on all-day duty to attend to the firing of the boiler, and the clerical staff cannot be expected to do this work. The small space occupied by gas boilers is also another consideration, and as in business thoroughfares the annual values of the premises are high, all space must be utilised to the best advantage.

One example of gas-fired boiler installations in London may be mentioned. At a branch of Messrs. Lloyd's Bank, Ltd., at Gray's Inn Road, the manager's room and general offices are warmed by a total of five hot water radiators heated by two gas-fired boilers fitted in a corner of the basement. Other similar installations are in use at several of the branches of Barclays Bank, Ltd., and the Westminster Bank, Ltd.

In Birmingham quite a number of small banks have been thus equipped, and a novel feature has been introduced which has proved a valuable addition to the installations. The Birmingham Municipal Banks consist mainly of lock-up premises, the hours of business varying considerably in order to meet the requirements of the depositors. It is considered necessary that each of these banks should be suitably warmed before it is opened to the public, and in the absence of a resident caretaker to light the gas boilers, this necessary action is carried out automatically by what is known as a "Rota" clock, which is fitted to the supply, and allows gas to pass to the boiler or boilers (at each of which a pilot light is always burning) at a pre-arranged time. In this manner one boiler—or a complete battery—may automatically be put into operation in the early morning, thus ensuring that the building is warmed by the time the staff arrives. The boilers are also fitted with an ordinary ½-in. byepass cock, which may be manipulated by hand and can either be turned fully on or only partly on, in accordance with prevailing climatic conditions. In some cases the manager also has a gas fire installed in his room. This is an inexpensive addition, as it is only used when the room is occupied, and then only when the additional heat or added cheerfulness of a gas fire is required.

The staff rooms of these banks are heated by a gas fire which has above its radiant fire-front a grilling oven with a special burner which can be used either to heat the oven or to boil a kettle or other cooking utensil placed on top. With this appliance any member of the staff can, if desired, prepare or warm up a mid-day meal; and water can be boiled and toast made for teas. Incidentally, hot water for washing and cleansing purposes is obtained from a gas-fired water heater.

5.—Vestibule of the Capitol Cinema, Haymarket, showing the "St. Martin" gas-heated radiators.

Fitting Gas Fires to Coal Grates.

The conversion of coal grates by the installation of gas fires against them, may now be regarded as almost a fine art. There are many modern ways of turning the old ugly combination of a coal grate with a gas fire placed in front of it into a thing of

beauty. Adjustable metal back plates or surrounds are now obtainable, finished in either plain or beaten antique copper, pewter or brass, and can be so fitted as completely to cover up existing coal grates; hearth plates to match can also be obtained if required. Other materials are also becoming popular for backings or surrounds. For instance, real marble panels, Urastone, Manu-marble, slabbed tile or built-up tile backings and the composition known as "Stuc." Any one of these may be so selected and installed as completely to harmonise with the scheme of decoration and with the gas fire which is to be fitted.

Perhaps one of the best indications of what may be done in the way of conversions is shown in Figs. 1 and 2, which are photographs of a room in the New Health Society's premises, Mr. Claude W. Ferrier, F.R.I.B.A., architect. Fig. 1 shows an old coal range as it was originally fitted in the kitchen of a large Bloomsbury mansion. Fig. 2, as it now looks, after being converted to gas heating for office purposes. The gas fire is one of a modern type fitted to a Manu-marble backing.

Another more ordinary type of conversion is shown in Fig. 3, which is a photograph of the surgery of the Sanatorium at Wellington College, Berks. In this case the gas fire has been fitted to a tiled backing, entirely masking the opening of the old coal grate. The pedestal boiling burner fitted on the hearth is a most valuable adjunct to such a room.

Flueless Heaters.

As a result of extensive research work, which has been carried out in the laboratories of the principal gas undertakings and gas stove manufacturers, a great improvement has been made in recent years in the construction of flueless gas heaters of the radiator pattern. The most modern type of these stoves has luminous flames, one of which burns separately in each tube or loop of the radiator. In one pattern the bottom is closed and the flames entirely masked; in another, the bottom is open, disclosing a bright metal surface from which the heat is reflected, thus providing a cheery glow. Each of them is fitted with a burner controlled by a Regulo Thermostat. This device automatically (and economically) regulates the gas consumption to a degree which will maintain the radiator at a predetermined temperature. These radiators have a considerable heating capacity; they are of attractive appearance, and are obtainable in various sizes from 4 to 10 loops.

An example which may well be referred to as ancient and modern is Fig. 4, a photograph of St. Andrew Undershaft, St. Mary Axe, London, a beautiful old City church, the Rector of which is the Right Reverend William Willcox Perrin, D.D., D.C.L., Suffragan Bishop of Willesden. This church was built in 1320, rebuilt in 1582, and is one of the seven City churches that escaped the Great Fire. This church is now heated in the modern fashion by the above-mentioned new type of gas radiator, one of which may be seen on each side of the picture.

An Important Advance in Cinema Heating.

We have previously referred to the Plenum heating and ventilating system at the Capitol Cinema, Haymarket, London (Mr. Andrew Mather, L.R.I.B.A., architect), which is operated by gas boilers as the heating agent, with an hourly output of 1½ million B.Th.U.s. The boilers are installed on the roof, thus saving valuable space in the building for other purposes. When the building was erected the Plenum system was designed primarily to heat and ventilate the auditorium, and a number of electric radiators were installed to warm the vestibule, corridors, etc. Early last winter it was decided to experiment with a modified form of the new gas-heated radiator, to meet the requirements of the London County Council authorities, regarding such buildings as cinemas, dance halls and similar places of entertainment, in respect of which they are guardians of the safety and health of the public. The experiment met with complete success, as a result of which a new flueless radiator known as the "St. Martin" has been constructed. It has a special arrangement at the base to ensure that the burner is entirely enclosed, and can only be lit through a special opening provided for the purpose, after which the aperture is automatically sealed by the closing of a covering plate, small coloured glasses in the base of the radiator indicating when the burner is alight. Fig. 5 is a photograph of the vestibule of the Capitol taken by permission of Sir Walter Gibbons. It shows several of the new gas radiators, no less than 65 of which are now installed in the vestibules, tea rooms and corridors of this well-known cinema. The radiators have met with the approval of the London County Council and have given complete satisfaction to the proprietors.

WARMING OF CHURCHES, PUBLIC BUILDINGS, AND PLACES OF ASSEMBLY

BY A HEATING ENGINEER.

WHATEVER advantages may be claimed for hot water in connection with the central heating of dwellings such as villas and the smaller types of buildings generally, it is certain that so far as large places of assembly are concerned, it does not possess any of the outstanding advantages that may be claimed for steam. Whenever the warming of churches, lecture halls, theatres and buildings used for public meetings, concerts and dances, is under consideration, the advantages associated with the use of steam should not be lost sight of.

In England there are a great number of churches and other places of worship that are by no means satisfactorily warmed, in spite of the fact that, in most cases, a low-pressure hot-water heating apparatus has been installed; in many instances an error is made by choosing the wrong type of radiating or heat-losing surface, this often consisting of 3 in. or 4 in. cast-iron pipes run in trenches below the level of the floor, the trenches being covered with cast-iron gratings. It is strange that an apparatus of a type particularly suited for warming a greenhouse should also be thought suitable for the warming of churches and other public buildings, where such vastly different conditions have to be dealt with.

For horticultural work of the ordinary kind, where the heating apparatus is in the care of one of the ordinary workmen—no one being specially employed as a mechanic or stoker—a hot-water apparatus consisting of large pipes has its advantages; the large volume of water contained within the pipes being comparatively slow in heating up, and about equally slow in cooling; consequently, should the fire be either forced or neglected as the result of unskilful stoking, there would be less likelihood of injury to the plants, owing to there being no possibility of a sudden and extensive rise or fall in the temperature.

But for warming churches and large public buildings, large pipes containing a considerable volume of water form one of the most unsatisfactory methods that are available for the purpose; the disadvantages may be stated in the following order:—

1. Churches being occupied, as a rule, on one day only in each week, it is a distinct advantage to be able to warm them quickly. This is a matter of some difficulty when a large quantity of water has to be heated, as the greater part of the heat generated in the firebox of the boiler is almost wholly taken up, for perhaps quite a considerable time, in raising the water to a serviceable temperature. There are numerous installations, the pipes and radiators of which hold many hundreds of gallons of water; the capacity of the boiler being considerable also.

2. Large circulating pipes take up considerable room, and, such being the case, it is generally necessary to run them in trenches in the floor, the trenches being covered by a cast-iron grating. The construction of trenches is a costly business, involving as it does work for the excavator, the bricklayer, and also for the mason, in those buildings where the floors are of stone. Although pipes in trenches are out of the way, they are not in a position favourable to the warming of the building, as much of the heat given off is absorbed by the surrounding masonry and the floor; and, whilst it may be true that this in turn gives heat to the air in the building, yet it is beyond question that to warm a place of assembly by first warming the brickwork and masonry at floor level is an exceptionally slow, indirect, and somewhat expensive method.

In the case of churches, and of large buildings, the floor concrete of the main building is, in the majority of cases, placed directly upon the earth, and, under such conditions, pipes run in trenches are in one of the most favourable positions for dissipating enormous quantities of heat; this, of course, means that, in order that the building may be properly warmed, considerably more radiating or heat-losing surface must be provided when it is placed in trenches than would be necessary if the pipes which provide such surface were run along the floor, and in positions more favourable for raising the temperature of the air within the building. Moreover, pipes in trenches are not in a position where the air has easy access to them; an even more serious drawback is that they are so placed as to render it almost impossible to keep them clean. Attention may be directed to the fact that the amount of heat given off by radiation is relatively small in comparison with the amount absorbed by the air coming into contact with the heated surfaces, consequently it is a distinct advantage if the air inside a building may easily make contact with the heat-losing surfaces of the heating apparatus.

3. Pipes in trenches are quickly covered with a layer of dirt and dust, which is a fairly good insulator, and this considerably hinders the giving off of heat; these dirt-covered pipes are far from being hygienic—much of the dirt having fallen from the soles of boots—and the unpleasant result is that when the apparatus is brought into full service, the peculiar smell due to heated dirt and dust is always noticeable. It would be very unreasonable to suggest that the caretaker should take up and replace the heavy gratings in an endeavour to clean the pipes occasionally; nor is it likely that this would be satisfactorily done if outside workmen were called in for the task; the dirt would probably be swept from the top of the pipes, and would find a permanent resting-place on the floor of the trench beneath them.

4. So slowly is the heating of churches, of quite moderate size, accomplished by hot water installations having pipes of 3 in. or 4 in. diameter, that in a number of cases that have come to the writer's notice, it is necessary to light the boiler fire on the Friday morning if the building is to be satisfactorily warmed for the service on the following Sunday morning. Considerably

radiation is required with hot water
is required with steam to obtain a
ır result; this, of course means that
space is taken up by the pipes and
ıors when hot water is the circulating
ım.
e advantages connected with the use of
ı for warming buildings of the type
r consideration may be enumerated as
vs :—
It is now possible to erect low-pressure
ı, vapour, or vacuum heating installa-
, and to guarantee completely successful
ts with an entire freedom from noise;
is a matter of the very first importance
church, or any building that is used for
c speaking.
According to one authority, steam at
spheric pressure has the enormous heat
city (calculating from 32 deg. Fahr.) of
.7, B.T.U.s, for every pound of water
orated. It is possible to raise steam
quickly, and it then speedily finds its
to the more distant parts of quite exten-
installations. In the case of the very
st installations having long horizontal
of steam and return mains, a vacuum
p may be installed, thereby ensuring
the steam will reach the most outlying
tors almost immediately.
The fact that when the boiler fire falls
the temperature in a steam-heated
ling may also fall rapidly is no dis-
ntage whatever when the building is
ty after being used, as is the case with
es of assembly.
Less radiating or heat-losing surface is
ired with steam, consequently less room
ken up by pipes and radiators; this is a
t advantage, as it will, in most cases,
nit of radiators being placed under the
lows along the outside walls, the pipes
g run above the floor, and thereby
iating the making of expensive trenches.
may be pointed out that 6½ sq. ft. of
t-losing surface that derives its heat
n low-pressure steam, will give out as
h heat as will 10 ft. of similar surface
derives its heat from hot water.
Churches being rather lofty buildings
members of the congregation often ex-
ence down draughts of cold air during
winter. Radiators placed at floor level
be found to have little warming effect
the air at a greater height than 15 ft.,
to remedy this unsatisfactory state
ffairs, the method adopted is to run one
nore pipes along the walls at a height
ear as possible to that mentioned; it is
possible to run these high-level pipes
hat some feature of the building will
r wholly or partly hide them; here,
n, the smaller pipe that may be used
steam is a decided advantage.
ith installations that have a vacuum
p forming part of the system, it is
ble to heat a building several stories
, with steam or vapour generated at a
ure below that of the atmosphere; con-
this with the pressure to which the
parts of an apparatus in a building
milar height would be subjected, sup-
g that hot water was the heating
um.
would be of considerable assistance in
ection with the heating of churches if,
the architect prepared the plans, he
l allow the consulting heating engineer
ork with him. If this were done, it
t be possible to arrange the seating
mmodation so that some of the radiating
at-losing surface could be placed in the
al part of the church.
conclusion, attention may be directed
e fact that modern steam heating in-
ions, having the hot water type of
or with the steam inlet at the top, and
ntlet for condensation (controlled by a
static steam trap) at the bottom, and
ably at the opposite end, offer a more
ive range of temperature control than
sible with hot water installations; this
ly eliminates one of the former objec-
to heating buildings by steam, but it
onfers very decided advantages.

EXHAUST STEAM AS A HEATING AGENT

By A. W. B.

The successful warming of buildings is not only a progressive industry, it is also a progressive science. A highly qualified heating engineer may be asked to design a heating apparatus, and to guarantee that it will give the temperature necessary for special, and sometimes varying, conditions, with a complete absence of draughts. Nor must he overlook such important matters as smoke abatement and the conservation of fuel. There is one branch of steam heating which has not yet received anything approaching the amount of attention it deserves, and that is the heating of buildings by exhaust steam. As a means of distributing heat, steam is deservedly in high favour, but one of the most economical methods of steam heating—that in which exhaust steam is made use of—has, to a large extent, been overlooked.

Throughout Great Britain there are a very large number of factories, workshops, and other buildings, in which, during the winter months, the workers labour under rather unsatisfactory conditions, in that they are not sufficiently warm, and are consequently, to some extent, discontented and unable to give the highest output of which they would otherwise be capable. In many of these same factories, etc., there is sufficient exhaust steam from the engines to furnish the necessary heat for the warming of the buildings, if this escaping steam were properly controlled and used, instead of being discharged into the atmosphere.

The use of exhaust steam as a heating medium may prove to be economical and profitable in quite a number of ways, to a few of which attention may be directed.

In the first place there is the higher labour output brought about because the operatives work under more agreeable conditions. Next, the exhaust steam, which would otherwise be wasted in the atmosphere, is utilised for warming the buildings, and the condensate is not wasted, but is collected and returned to the boiler at a temperature ranging from 150 deg. to 160 deg. F. Three distinct advantages are thus brought about, these being due to a direct gain in the labour output, and to a considerable saving of water, and consequently of heat units and of fuel.

Thirdly, by the installation of a vacuum pump, it is possible to avoid any back-pressure upon the pistons in the engine cylinders.

Lastly, the increased labour output, and the continuous saving of water and of fuel, will in a short time more than counterbalance the expense incurred in installing the exhaust steam heating installation; indeed, one of the most profitable investments that an employer of labour can make is that of installing an exhaust steam heating apparatus, provided that suitable conditions avail. The cost of installing the apparatus has to be made once only, but the higher labour output, the increased profits, and the saving of fuel, result in financial gains that continue year after year.

Connections and Special Fittings.

Heating by exhaust steam calls for the use of the following special fittings and the necessary connections:—(1) A back-pressure valve; this must be connected to the steam exhaust pipe in such a position that the end of the piping which extends from the outlet side of the valve, has free access to the atmosphere. In most cases where buildings are heated by exhaust steam a vacuum pump is employed, and back-pressure upon the engine pistons is prevented entirely; but even without such a pump, a very light weight upon the back-pressure valve is all that is necessary to ensure perfectly satisfactory heating service, consequently only an exceptionally small amount of extra work is thrown upon the engines. A steam operated vacuum pump may be employed; the supply of steam being obtained from the high pressure main, and the exhaust being discharged into the exhaust steam heating main so that it may assist in the warming of the buildings.

(2) An oil separator; this fitting is necessary because of the oil that is carried by the exhaust steam. On no account must oil be allowed to enter the heating system; if the interior surfaces of the radiators are coated with even a very thin film of oil, their efficiency will be greatly reduced. The oil separator must be connected to the steam exhaust pipe, before the said pipe is joined to the heating main; a *gate* valve should be fixed as near as possible to the *inlet* side of the separator, both of these fittings being so placed that when the gate valve is shut for the purpose of cleaning or repairing the separator, the exhaust steam may pass freely through the back-pressure valve and escape into the atmosphere; Fig. 1 will make this clear. The makers of oil separators will furnish the necessary instructions for fixing; Fig. 2 shows one of these fittings connected to an exhaust steam heating main.

(3) A pressure reducing valve; this must be connected directly between the live steam main and the exhaust steam heating main. A by-pass, with stop valve, must also be connected as shown by Fig. 3. A globe pattern stop valve must be inserted in the live steam main as near as possible to the inlet side of the pressure reducing valve, and a gate pattern stop valve must be connected as near as possible to the opposite (outlet) side. When conditions render it necessary, steam, reduced in pressure, will pass from the pressure reducing valve, through the gate valve, and into the exhaust steam heating system, where it will supply heat to the

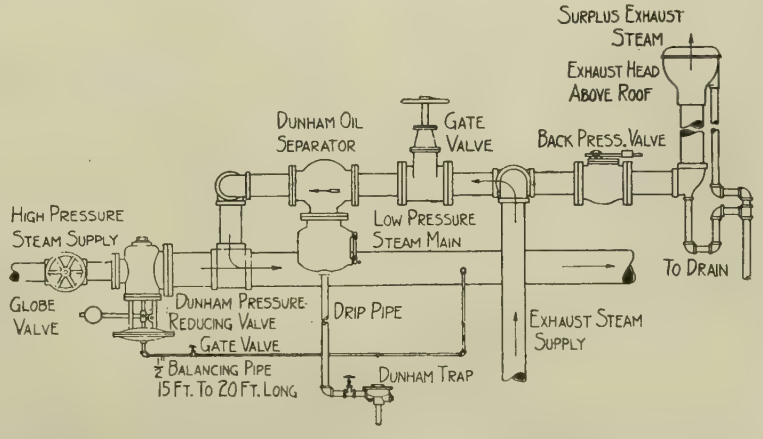


Fig. 1.—Pressure Reducing Valve : Oil separator and back pressure valve connected to exhaust steam heating main.

pipes and radiators. It should be carefully noted that the globe valve and the gate valve are within the by-pass connections: this arrangement makes it possible for live steam to be passed through the by-pass and discharged into the exhaust steam heating main, should it be necessary at any time to close both the large (main) valves in order that the pressure reducing valve may be removed for repairs. When the steam is supplied by a high pressure boiler, a 2-in by-pass will be found sufficient to supply an 8-in. low pressure heating main; a 3-in. by-pass being sufficient in the case of a 10-in. or a 12-in. low pressure main. The size of the by-pass is governed by the pressure carried in the high pressure main, and by the size of the heating main it has to supply.

A safety valve of reliable make should always be connected to the exhaust steam heating main as a safeguard against an excess of pressure accumulating in the heating system should a piece of scale or other foreign matter find a lodgment upon the seating of the pressure reducing valve, and so prevent its closing completely. The safety valve would also afford the necessary relief should too much steam be inadvertently allowed to pass around the by-pass and into the heating system. Attention may be directed to the important fact that the safety valve must be fixed in a position which is clear of all stop valves as indicated by Fig. 3.

The purpose of the pressure reducing valve is to supply steam *automatically* from the high pressure main to the exhaust steam heating main, if at any time the supply of exhaust steam should be wholly or partially cut off or, from any reason, become insufficient to meet the demands of the heating installation.

It would be a mistake to assume that, because a by-pass is advocated, a pressure reducing valve is an appliance that is likely to give frequent trouble, as this will not be the case if one is chosen which is of good design and make. Sometimes steam mains are disconnected for the purpose of making alterations or additions, and if at such times a piece of scale or other solid matter becomes detached and is left in the pipe, it may be carried by the steam into the reducing valve, and eventually find a place of lodgment on one of the seatings. Whenever any foreign matter lodges on the seatings of a pressure reducing valve, that appliance must be taken to pieces before the obstruction can be removed, and at such times the low pressure main may be supplied with steam, if necessary, by means of the by-pass, the safety valve giving warning and relief if at any time the pressure should exceed the normal.

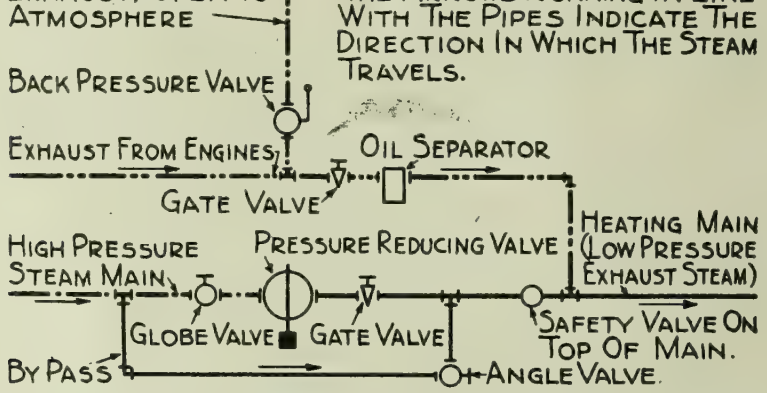

Fig. 3—Heating by Exhaust Steam: Plan showing connection of various fittings, etc.

Principles Governing the Working of a Pressure Reducing Valve.

A pressure reducing valve is a mechanical appliance concerning which there is considerable misconception. Many mechanics who are connected with the heating industry hold the mistaken idea that a pressure reducing valve merely reduces the area of the orifice through which the steam is allowed to pass; if such were the case these special appliances would be quite unnecessary, as the same result could be obtained by inserting in the steam supply main an ordinary stop valve, which could be closed to whatever extent should be considered necessary to achieve a desired result. Another method would be that of reducing the internal diameter of the main to the necessary extent and at the proper point. If either of the foregoing methods were adopted, the reduced area would bring about a great reduction in the quantity of steam that could pass through in a given time, and so long as the end of the piping remained open, and a free outlet was thereby provided, all might be well. But, supposing the piping had a stop valve on the outlet end, what would happen in the course of a few moments, so far as pressure is concern if the valve were closed completely?

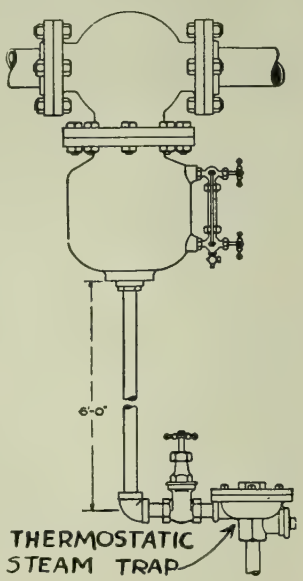

Fig. 2—Oil Separator connected to an exhaust steam heating main.

The sketch Fig. 4 will help to make cl the difference between a reduction in pressure of steam and a reduction in quantity passed through an orifice. In sketch, A represents a 4-in. steam m which is connected directly to the boiler, pressure in which is 100 lb. per square i this being indicated by the gauge E. main A is connected by a ¾-in. pipe another 4-in. main C. On the end of C 1½-in. stop valve H, which, when open to full extent, allows steam to be discha freely, so that a pressure of 10 lb. per sq inch is not exceeded in the main C, as i cated by the pressure gauge F. The re tion in the pressure is brought about cause the reduced quantity of steam w passes from A to C through the ¾-in, necting pipe has a free outlet through open valve H. But what would happen posing the valve were shut down pletely? In the course of a few seconds pressure in C would rise considerably, in a very short time it would be carryi pressure equal to that in the main A. F the foregoing it will be clearly seen tha reduce the opening through which the st may pass does not necessarily mean that pressure is reduced also. Passing a red quantity of steam through a pipe is s thing entirely different from the pressu steam within the pipe when all outlets closed.

Reduction in Pressure—How it is Obtai

Let it be supposed that a pressure ducing valve is set so as to give a pressu 5 lb. per square inch on its outlet (low sure) side; when that pressure is rea the valve cuts off completely the suppl steam from the high pressure main, an long as there is a pressure of 5 lb. square inch on the outlet side, no additi supply of steam can pass through the and enter the heating system.

If the working of the arrangement s by Fig. 5 is studied for a few moments manner in which a pressure reducing does its work will be more clearly u stood. The sketch shows the section o 8-in. high pressure steam main, whi connected by a 3-in. branch to a globe tern stop valve fitted with a long ha Connected to the outlet side of the valve is the 6-in. main of a heating s which is to carry a pressure of 5 lb. square inch only; the pressure in the steam main being 100 lb. per square If a man were stationed at the stop he could, by moving the long handle, the valve and allow steam to pass int 6-in. heating main until the gauge nected therewith registered a pressu 5 lb. per square inch, when, by pushin handle back to its original position, he again close the valve, thereby cutting o supply of steam. When the gauge indi that the pressure in the heating mai fallen slightly, the man would again the valve, once more closing it when a sure of 5 lb. per square inch was registered. This alternate opening closing of the valve would sometimes k man very busy, since the supply of necessary would depend upon the ra with which the radiators lost heat. the pressure gauge were carefully w the lower pressure desired could be factorily maintained in the heating s by opening or closing the stop valve

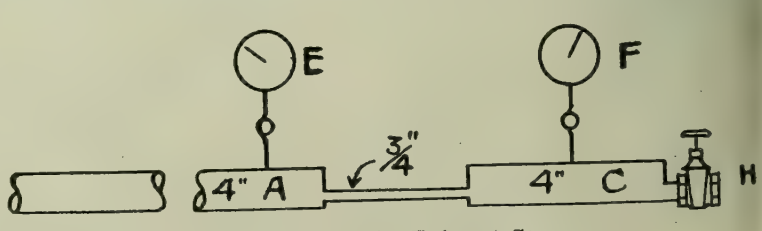

Fig. 4—Heating by Exhaust Steam.

er required. If the stop valve were taken
t, and a pressure reducing valve fixed in
ace thereof, the man would no longer be
cessary, as the pressure reducing valve
uld open and close automatically as the
essure in the heating main fell below, or
creased to, 5 lb. per square inch, conse-
ently the supply of steam from the high
essure main to the heating main would
effectively controlled without human aid.
hen the pressure on the outlet side of a
essure reducing valve reaches that at
ich the valve is set to work, the valve
ses and cuts off the supply of high pres-
re steam, but as soon as the pressure on
e outlet (low pressure) side falls, the
lve opens again, and an additional supply
steam passes through. The valve will
ntinue to open and close in accordance
th the variations of pressure on its outlet
le.

If one or more of the engines which dis-
arge their exhaust steam into the heating
stem are shut down for repairs, thereby
tting off (partly or wholly) the supply of

HEATING BY EXHAUST STEAM.

haust steam, the pressure reducing valve
ll automatically allow steam from the high
essure main to pass into the heating
stem so that the deficiency may be made
od.

Pressure reducing valves can be arranged
supply steam to vacuum heating systems.
vacuum heating apparatus is one in which
steam is generated below atmospheric
essure. Heating systems are now erected
which a vacuum is carried in the supply
ins as well as in the return mains. When
nected to heating systems of this type, a
essure reducing valve can be arranged so
t it will supply steam whenever the
uum in the supply mains falls below
nospheric pressure to the extent that has
n decided upon; as soon as the vacuum
been sufficiently reduced the valve will
e, and the supply of steam will be cut off
the time being

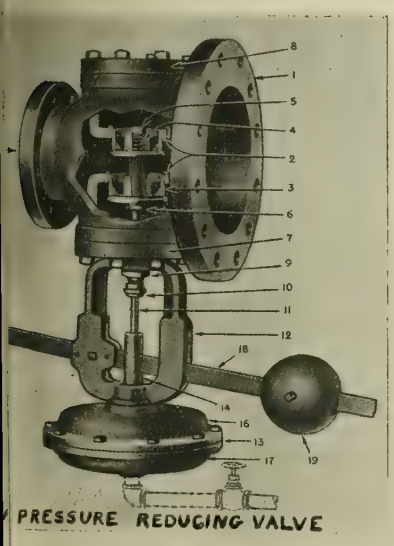

Fig. 6.

ELECTRICITY FOR HEATING AND LIGHTING

The time must come when Electricity will be for everyone, like the waters of the Earth and the winds of Heaven. It must be provided and provided liberally, enabling the people to use it as they wish like the air which they breathe.—ZOLA.

The wealth of epithet and metaphor to which the words "sunshine," "sunny," etc., have given rise in the languages of the world, give an indication of the realisation of the necessity to all forms of life of sunlight. Sunlight enables life: it provides heat, light and energy, without which life cannot go on. Heat and light, however, besides being essential to life, exercise a very great effect on the world's happiness. To study people's faces on a summer's warm day and to compare the cheerfulness and comparative hopefulness found on many faces with the dull inanimation so commonly found in mid-winter, is to realise the value of sunshine. Sluggish faces mean inactive minds, and for this reason, the necessity for adequate and proper heating and lighting in home and office cannot be too greatly emphasised.

Heat may be transmitted from a fire by two methods—radiation or convection. The process of convection is the actual warming of the particles of air, which travel in streams or current through the room; by the method of radiation, however, heat is emitted from the fire, and passes into the room, travelling in straight lines and *without* heating the air through which it passes. Of these two processes, undoubtedly the better is that of radiation. This may be explained by the fact that, as the temperature of the air in a room rises, so does its saturation point—that is, the extent to which it will hold water without condensation taking place—rise accordingly. To satisfy this increasing point of saturation, the heated air absorbs water from any and every source available, including the mucous membrane of the throat and nose, which is left in a dry and parched condition. Such heat gives out no energy, rather does it devitalise or vitiate the atmosphere. It is clear that work that is important—indeed, any work—cannot be accomplished under such conditions, and that a means of heating by radiation is advisable, and electricity is well adapted to this purpose. The progress during recent years of electricity for commercial and domestic use has been very great, and amongst the reasons for this progress may be counted the following:—First, a reasonable price per unit of power; secondly, the quality of the electrical fittings—lamps, radiators, electric cookers, etc., which, in efficiency, beauty and convenience, are irreproachable—and lastly, reliability. These points may well be considered in greater detail.

There has always been an abundant supply of electricity since the early years of its development, due to the immediate recognition of its possibilities. It is, however, to be made clear that there is little likelihood of any considerable lowering of the price of current, which at present compares very favourably with other forms of power, as regards unit cost. The impression that yet greater development and extensions of the field of action will result in a material reduction of the unit cost, is erroneous, since the expense of generating stations, sub-stations, and especially of cables and their laying, is large enough effectually to neutralise any reduction in price that might be expected from the extended use. Any saving in cost must, therefore, come from the other end, that is, in the apparatus in which the current is used, and this, indeed, is what is taking place. Figures that give a comparison of running cost of electrical apparatus with that occasioned by other forms of power, are out of place, but it may be taken that such comparison is not unfavourable.

The third point—that of reliability—is amply proved by the unfailing supply of current that is available wherever the electricity system exists. There are, however, other advantages which are of value, perhaps the most important being the total absence of combustion that prevails in the utilisation of electricity. This constitutes an immense advantage, as it does away with flues, while, in addition, the air of the room is not rarified. We have recently inspected some electric radiators which give off radiant heat and light analogous to sunlight, both in appearance and effect. We speak from experience when we say that these radiators—which are used throughout in a restaurant which we illustrate in this issue—produce a most beneficial and cheering effect almost as though one were walking on a summer's day. Children, always honest in their tastes, bask in its rays, which invigorate, in addition to warming. The radiators render possible the carrying-out in England of the sun-parlour, so popular in America, but unfortunately practically impossible hitherto in this country for reasons which are not deeply hidden. These "sunray" lamps are very definitely medicinal in their effect, but it seems to us that their use should not be looked upon as in the nature of being curative so much as being pleasant. We walk in the sun because we feel happy there and not because our brain has told us that it is time the body drank in ultra-violet rays: it is in the same light that these radiators should be regarded.

This is but one of the many uses to which electricity may be put. It may be used for cooking, refrigeration, cleaning, besides for running plant. Architects and contractors will do well to make intelligent inquiry into its future.

R.I.B.A. Statutory Examinations.

The R.I.B.A. Statutory Examinations for the office of District Surveyor under the London Building Acts, or Building Surveyor under Local Authorities, will be held at the R.I.B.A., London, on October 19, 20 and 21, 1927. Applications for admission to the examinations, accompanied by the fee of £3 3s., must be received at the R.I.B.A. not later than Monday, October 3. Full particulars of the Examinations and application forms can be obtained from the Secretary, R.I.B.A.

Memorial to Warwickshire Freemasons.

A Temple, erected by the Freemasons of the Province of Warwickshire as a memorial to Brethren who fell in the Great War, was opened on Friday last by the Pro. Grand Master, Lord Ampthill. The building provides three self-contained suites of Lodge rooms, and there is a handsome entrance hall and marble staircase. It has been built to the designs of Mr. Rupert Savage, F.R.I.B.A., and Mr. Gilbert Bayes has executed the sculpture on the Portland stone façade.

THE BUILDING TRADE

BUILDERS AND THE LEAD PAINT (PROTECTION AGAINST POISONING) ACT, 1926

Though it is now some nine months since the coming into force of the Lead Paint (Protection against Poisoning) Act, 1926, it is to be feared that a certain number of master-painters and master-builders are yet in ignorance of the requirements of the Act, a supposition only strengthened by the recent convictions and subsequent fining of several decorating and contracting firms in England and Scotland on the grounds of non-compliance with the requirements of the Act. Every person who employs other persons in painting buildings, *whether lead paint is used in the work or not*, will do well to make a careful study of the Act with a view to fulfilling the necessary conditions. The full text of the Act, the Regulation regarding the carrying out of which comes into force on October 1 (to-morrow), was given in the issue of *The Builder* for December 31, 1926.

A report by Sir William Warrender Mackenzie, G.B.E., K.C., to the Home Office on "Draft Regulations for preventing danger from lead paint to persons employed in or in connection with the painting of buildings," has now been issued (price 3d. net) by H.M. Stationery Office, Kingsway, W.C. The following are extracts from the text :—

The disease of lead poisoning is frequently fatal and in its severe form is incapacitating. The chief source of the disease is caused by inhaling dust impregnated with lead. In the painting of buildings, more particularly in house painting, this arises mostly in rubbing down the surface of a lead-painted structure in order to get a fine and smooth surface for re-painting. There is also an element of danger when paint gets into the workman's clothes and is not at once removed; the paint becomes dry, and then is brushed off in the form of dust and is liable to be inhaled. In a less degree there is some risk of lead paint getting into the human system by the operative, who has been in contact with lead paint, eating food with dirty hands, or possibly by absorption through the skin. Regulation 3 (*a*) is framed with the object of eliminating lead dust. It provides that "No painted surface shall be rubbed down or scraped by a dry process." The purpose of this draft Regulation is to place upon the employer the duty of rubbing down a painted surface by a wet process. Hitherto it has not been practicable to rub down wet with ordinary sand paper, as the paper rubs through as soon as it becomes wet. Now, however, a new form of sand paper has been produced in which the paper is water-proof. "Burning off" is not regarded as coming within the terms of Regulation 3. The effect of using a liquid—whether water, spirit or a lubricant—on the painted surface varies according to the nature of that surface. In the case of stone, brick or timber buildings the rubbing down can, generally speaking, be equally effectively done by dry or wet process; but the effect of rubbing down a painted surface of iron or steel work by a wet process is to set up corrosion of the iron or steel, and if oil is used there is a tendency to create a filmy lining on which the new paint will not adhere. It was therefore contended that Regulation 3 (*a*) of the draft Regulations was impracticable in respect to iron and steel surfaces of the nature found in the roofs of railway stations, locomotive sheds, bridges, constructional engineering units, etc. Three classes of employers took exception to the application of a wet process in rubbing down the painted surface of iron and steel work, namely (1) the Railway Companies, (2) the Constructional Engineers, and (3) General Engineers, Shipbuilders and Iron and Steel Manufacturers. The Railway Companies are concerned with iron and steel work in roofs of railway stations and locomotive sheds, bridges, etc.; the Constructional Engineers in girders, columns, roof trusses, etc., for new buildings, and Engineers generally, Shipbuilders and Iron and Steel Manufacturers in maintenance work in their factories, workshops and plants. In his evidence Sir Gerald Bellhouse suggested that an exemption might be introduced in Regulation 3 (*a*), which would exclude the removal of paint from iron and steel by chipping, scraping or brushing with a wire brush, but not rubbing down by sand paper; and expressed the opinion that the health of the worker would not be imperilled by such an amendment. The dust from wire brushing is coarser and less likely to be inhaled than dust arising from rubbing down with dry sand paper. The decision of Sir W. W. Mackenzie upon this point is that—"It appears that when the Regulations now under consideration were originally drafted in 1922 and re-discussed in 1927, the actual position of rubbing down lead-painted surfaces of iron and steel work by dry process was not considered. The evidence adduced at the Inquiry showed the great difficulty, if not impossibility, there was in cleaning and repainting iron and steel construction work in the event of dry rubbing down and scraping being absolutely prohibited. The Geneva Convention excepted from prohibition white lead, etc., where its use was considered necessary for railway stations or industrial establishments by the 'competent authority' after consultation with the employers' and workers' organisations concerned. Although, according to the evidence, there is an element of danger in dry rubbing down of lead-painted iron and steel surfaces with a wire brush under cover, apparently no case of lead poisoning has been directly traced to the operations of rubbing down these surfaces. I think, therefore, at least as a tentative measure, the suggestion made by Sir Gerald Bellhouse should be given effect to, and I recommend that Regulation 3 be amended accordingly." The railway companies did not submit any objections to any of the other Regulations, and did not claim exemption from the Regulations generally with regard to the painting of such buildings as hotels, waiting rooms, etc., or of fencing and railings. Exception was taken on behalf of the Engineering and Allied Employers' National Federation, the National Federation of Iron and Steel Manufacturers, and the Shipbuilding Employers' Federation to Regulation 4 (*b*), which provides:—"Five minutes shall be allowed to each such person for washing before each meal time and before leaving work." The main grounds of objection were:—(1) Where maintenance men are regularly employed on painting work it would upset the discipline of the factory if they were to have the right to stop five minutes before the usual stopping time, and the other workmen who have no such right will at once slack off. (2) There is no similar provision in the Vehicle Painting Regulations, and where vehicle painters and maintenance painters are employed in the same factory (as they sometimes are) the proposed Regulation would cause dissatisfaction and unrest. (3) the proposed Regulation will add to the manufacturing cost of the industry. (4) Such a Regulation would be *ultra vires* in that the provision of five minutes is not necessary to prevent danger to persons employed in or in connection with the painting of buildings.

It was contended *contra* that the granting of a period such as five minutes is common throughout the painting industry, and wh painting operatives from the painting indu try are employed in engineering, shipbuildi and iron and steel establishments on paintir work a period of five minutes or other reaso able time is allowed. The decision of S W. W. Mackenzie on this point is:—"T circumstances of the present case are speci and it seems to me best to allow the matt to be dealt by mutual agreement and n by statutory regulation. I, therefore, fi that the case for Regulation 4 (*b*) had n been established and should be omitted fr the Regulations."

It was contended on behalf of the Engine ing and Allied Employers' National Fede tion that machinery, which might be regard as "fixtures," should be excluded from t operation of the Regulations. Mr. Harn submitted that the Bill originally includ "buildings" only, but Parliament extend it to "fixtures," the object being to bri in large machinery which is part of the pr mises, and that to exclude machinery fr the Regulations would tend to defeat t object of the Act. The decision on this po is that "the Regulations should, if possibl avoid questions of legal nicety and difficult but it appears that Parliament by amendme introduced 'fixtures' into the Bill, and would be flying in face of Parliament to fra Regulations excluding machinery from t category of fixtures without cogent reaso and none has been shown." In conclusio Sir W. W. Mackenzie writes:—"Regulatio 1 (*a*) and (*b*) have been recast in order carry out the objects of the Act more effe tively. Several amendments have been ma in some of the Regulations, other than tho already specifically mentioned, mostly of drafting nature. Doubt was expressed as the meaning and effect of 'prescribed' leaf in Regulation 7 (*a*). By virtue of Section of the Interpretation Act, 1889, expressio used in regulations made under an Act Parliament have the same meaning, unle the contrary appears, as in the Act conferri the power to make them (Cf. Reg *v.* Walk (1875), L.R., 10 Q.B., p. 358). The Act 1926 (see Section 8), under which the Reg lations (now under consideration) are mad is to be construed as one with the Factory a Workshop Acts, 1901 to 1920; and und Section 156 (1) of the Factory and Worksh Act, 1901, 'prescribed' means prescribed the time being by the Secretary of Sta 'Prescribed' leaflet in Regulation 7 (means, therefore, a leaflet prescribed by t Secretary of State."

Cotswold Slates for U.S.A.

Over 200,000 Cotswold slates during t past ten months have been packed in cas with Bedford sand, and shipped to New Yo for Lake Michigan, to roof a mansion a other buildings. The casing and packing h been carried through by Mr. W. Cox Ho man, of Stow-on-the-Wold, whose fo slater has for the last six months been on job, superintending the laying. The sla were supplied from the Eyford Hill, Hu mans, and Southdown Quarries.

The Quarrying Industry.

The importation of foreign stone for ro was urged as the cause of lack of orders increasing unemployment in the roadst quarrying industry at the recent meeting London of the Federated Quarry Owners Great Britain. A report was received f the east of Scotland that one quarry closed its stone-crushing plant. At two ot quarries there were large stocks and orders, and dismissals were likely. It stated that in England and Wales the qua ing industry, including chalk, was suffe from foreign importations.

BUILDING CONTRACTS

W. T. CRESWELL, Barrister-at-Law, R.I.B.A., Assoc. (late Fellow) Surveyors' Institution.

Oral Agreements for Building Works.

A goodly number of building works are mmenced without the formality of any reement or contract being previously tered into between the employer and the ilder employed. In some instances which ve come within the writer's experience, ere has not existed even a scrap of paper documents of any kind which might enable e to form an idea of what was originally tended by either or both of the parties. evertheless in most instances it is not diffilt to show that there was in fact an agreent of some sort entered into between them; ther an oral agreement which, however fficult it may be to prove the precise intenns of both parties at the outset, yet neverless may be proved to have existed by rerence to the action and conduct of the pars prior to, and during the continuation the building work. Proof is more easily tablished if some sort of documents can be rought to light and linked together to show e intentions as, for instance, a written nder referring to a written specification or rawing, or a written acceptance of the nder if the essentials to a contract are resent.

Unless, however, the building contract carefully written out and meticulously gned, disputes almost invariably arise as what was intended and included in the ntract. There is a special likelihood of uestions as to the right to payments for extra" works, and as to what is inuded in the term "build" and the term complete."

At such a juncture an architect or surveyor often called on by the employer to adjust atters, but although a builder may be leased to accept this course as a ready means a settlement, he is not bound to recognise he architect's or surveyor's decision as final nd binding.

It is true that the employer has an undisuted right to vary the terms of the agreent during the course of the work accordg to his wishes, but such variation may inolve "revolution," or even a breach of the riginal agreement if not carefully provided or by the contract in writing. In general contract can only be varied, altered, or reinded by both the parties thereto.

Since what is fixed on the land remains the roperty of the employer, or rather that of the wner of the land, if the employer refuses to ay what is reasonably due to the builder, e latter is compelled (if he determines to cover) to seek redress in the Court, when hat is reasonably due will be awarded him. However, the differences arising between mployers and builders are in most instances ore conveniently determined by arbitration, hether the agreement be oral or written. he refusal of the employer to pay the builder ything on account of work done in the sence of any conditions as to interim yments does not entitle the builder to leave work before complete, unless definitely structed by the employer he must first mplete the work before he can sue for each of the contract. This still applies en if there *is* an agreement and that also writing for payment by instalments and employer yet fails to pay promptly. Such lure is not a lawful excuse for non-performe or abandonment of the work, unless *mpt* payment is an express condition of contract. It must further be proved that employer's delay in paying is unjustiable. The builder must be able to show he Court that he has at all times been ing to perform, and that he has, in fact, estly performed his part of the contract so far as he has not been prevented by the ployer from doing so. Therefore in order put himself in the best possible position stablish in Court his claim for what is due him (and damages arising therefrom) he uld complete the work first. If the emer prevents him from doing so, as for instance by employing another builder to complete and refusing to pay, his conduct may be regarded by the Court as a recession of the contract; and as evidence of his intention to abandon, or an incapacity to perform his part of the contract. In the case of a lump sum or entire contract, the builder would be entitled to claim the whole price for the work as a liquidated demand.

The final word is, building work should not be begun until a written contract is entered into between the parties.

DR. BARNARDO'S HOME

Building Trade Appeal.

We have much pleasure in publishing, at the request of Mr. Frederick Higgs, and with the grateful thanks of the whole Committee, the following list of subscriptions received since the date of our last list published on May 13th, 1927, in support of the building trade effort to provide additional buildings to celebrate the Diamond Jubilee of Dr. Barnardo's Homes :—

NEW BUILDINGS IN LONDON

Addiscombe.—HOUSES.—Sixty-four houses are to be erected at Nursery Close and Nursery-avenue, Croydon, by Mr. P. Richardson, of 136, Addiscombe-road.

Canning Town.—STATION.—The reconstruction of the old Thames Ironworks, Canning Town, into a modern shipping station, has now commenced. The directors of S. Instone and Co., Ltd., have leased the site from the L. and N.E.R. Co., and are having extensive alterations and additions made.

Chelsea.—ENLARGEMENT.—The Kensington Borough Council has received a communication from the Managers of the Oratory Central (R.C.) School, Stewart's-grove, Chelsea, forwarding a formal notification of their intention to enlarge the school so as to provide additional accommodation for about 160 children.

Coulsdon. — HOUSES. — Messrs. J. H. Thompson and Sons, Ltd., of Grimsby, are to erect 50 houses in Westleigh-avenue, Coulsdon, for the Coulsdon and Purley Urban District Council. The houses are to cost £21,979.

Croydon.—HOUSES.—Messrs. Thomas & Son, of Bramley-avenue, Coulsdon, are to build 44 houses in Biggin Wood-road, Croydon.

Croydon.—SCHOOL.—Messrs. G. E. Everitt & Sons, Ltd., of Croydon, have secured the contract for the erection of Long-lane school for the local Council. The price for the tender is £13,013.

Croydon. — EXTENSIONS. — The Croydon County Borough has approved the estimate of the Borough Engineer to erect extensions to the Central Library. Tenders are to be invited, and application is to be made to the Ministry of Health for sanction to borrow £18,000, which is the estimated cost of the work.

Hammersmith. — EXTENSION. — Work has started on the extension of Cadby Hall, W., the premises of Messrs. J. Lyons and Co. The site of the new building is in Blythe-road. A large block of premises is to be demolished. Most of the work is being carried out by Messrs. Lyons' own building departments

Kensington.—REBUILDING.—The Kensington Borough Council are proposing to rebuild and enlarge the Central Library in Kensington High-street, and also extend the Town Hall.

Lambeth.—BUILDING.—A new building is to be erected on the north side of Cleaver-street, Lambeth, for H.M. Office of Works. The Lambeth Council has passed the plans.

Lewisham.—HOUSES.—Mr. J. G. Stephenson has submitted plans to the local Council for a further 99 houses on the Downham estate, for the London County Council.

Shepherd's Bush.—EXTENSIONS.—Detailed plans are now being drawn up for the Board of Trade to provide for the alterations and extensions which are to be carried out in the various exhibition halls at the White City.

Shepherd's Bush. — EXCHANGE. — H.M. Office of Works are inviting tenders for the erection of a telephone exchange at Shepherd's Bush, W.12.

Stoke Newington. — BATHS. — The Stoke Newington Borough Council has decided to acquire a site at the corner of Clissold-road and Church-street for a new swimming bath, and not the site in Albion-road. Though the site has been changed, the scheme remains unaltered

Thornton Heath.—CHURCH.—The Vicar of St. Paul's, Thornton Heath, has received the Croydon T.C.'s permission to utilise a site at the corner of Green-lane and St. Oswald's-road for the purpose of the erection of a church and parish hall.

Thornton Heath.—BATHS.—The Croydon Council has decided to proceed with the erection of the Thornton Heath Baths. The Borough Engineer is to prepare the plans and estimates.

COTTAM HALL BRICK AND TILE CO., LTD. (223,371). Registered July 22. Nominal capital, £10,000

TRADE NEWS

Artificial Light and Health.

During the past fortnight, the public h been mystified by advertisements and sho cards in electrical dealers' windows, aski the question "Are you a Shemsu-Ra Shemsu-Ra was the cult of Sun-worship Egypt 8,000 years ago, and the present counterpart in the cult of good lighting. T link between Sun-worship and respect for health giving artificial light of the Pe Osram is a strong one, and it is explain and elaborated in a well produced book which the General Electric Co., Ltd., ha just issued entitled "Sun-worship, B 6000—A.D. 1927." It deals in interest fashion with the cult of sun-worship—worship of good light by the ancie Egyptians thousands of years ago. S worshippers are designated "Sun-folk" Sir E. A. Wallis Budge, M.A.Litt. sometime keeper of the Egyptian a Assyrian Antiquities in the British Museu and his account of their devotion to the g of good light is most interesting. The bo let may be obtained from electrical dealers request.

Automatic Control Gas Cookers.

The Radiation "New World" G Cooker, with its "Regulo" automatic he control, direct bottom-flue-outlet, and sin burner in the oven, was introduced Radiation, Limited, in 1923. In the sh space of time which has elapsed, the "N World" Cooker has attained a hi position, indeed, we understand that it used to represent the gas industry wh comparisons between various methods cooking are to be made. A gas oven sho be designed so that the hot stream products which leaves the burners shall n come into immediate contact with the fo to be cooked, as in such an event burni may result. To avoid this happening, gap has to be left between the cooki zone and the wall of the oven. With t burners it is necessary to provide t spaces, one at each side of the oven direc over the burners. With the single burn only one such space is required, and in t "New World" construction, owing to t position of the burner, this space is situat at the back of the oven.

In the present series of "New World Cookers, which are manufactured by all t six Radiation firms, all working parts a standardised and interchangeable, but t exterior designs vary in the individu makes. Several improvements of design reduce labour and increase the efficiency the cooker still further have been int duced. At the same time the range temperatures controlled by the "Regulo has been extended downwards, and an ad tional low temperature cooking zone h been provided at the bottom of the oven

Full information on this subject may obtained from Radiation, Ltd., 164-1 Queen Victoria-street, E.C.4.

All-Copper Ventilators.

Messrs. Ewart & Son, Ltd., of 346-Euston-road, N.W.1, have issued a new of all-copper ventilators, with current redu prices now in force. The list contains n new designs of all-copper ventilators, gives details of approved methods of fixi "First cost is last cost" is the ideal of bu ing construction, and Ewart's all-copper tilator reduces the cost of building main ance, as, we understand, no painting or pair is required.

Electric Lamps.

The Philips Lamps, Ltd., 145, Ch Cross-road, W.C.2, will be glad to forwa all interested, a copy of their new leaflet which contains full particulars of their l marketed in this country. In additic electric lamps for ordinary purposes, the manufactures lamps of every descriptio all industrial purposes.

NATIONAL FEDERATION OF HOUSE BUILDERS

Scarborough Conference.

The half-yearly meeting of the National Federation of House Builders was commenced yesterday at Scarborough, under the presidency of Mr. J. W. Comben, of London. The Federation were given a civic welcome by the Mayor of Scarborough, Alderman J. Bielby, J.P., and on his invitation the conference meetings were held in the Town Hall. In the afternoon an important discussion was held on the possibility of building houses to rent. All builders who have been accustomed to that class of business in pre-war times are turning their attention to the possibility of erecting houses in large numbers to be let to tenants. The great point in this consideration is whether the builder can offer an attractive investment to the property owner. If he cannot do so he cannot build to rent. He may be able to erect a comparatively small number of houses which he will have to hold himself, but unless houses can be built to sell to the investor, the problem has not been solved. In addition to the important organisation matters to be discussed this morning (Friday), the conference will discuss other matters. The question of the taxation of unsold ground rents will be before the meeting, and in this connection the Federation may find it necessary to take up a definite attitude. The other matters of building society loans and road-making specifications and costs are also of very great importance to members. A full account of the conference will be given in a future issue of this journal.

Slater and Tiler's Estate.

Mr. Henry Wragg, of 41, Clarence-road, Chesterfield, slater and tiler, who died on June 17, aged 56 years, left estate of the gross value of £49,149, with net personalty £44,405.

Plumber's Estate.

Mr. John Johnston, of Irvine, N.B., plumber and sanitary engineer, left £7,194.

THE SCOTTISH BUILDE

HOUSING PROGRESS IN SCOTLAND

The following figures show the progress that has been made in State-aided housing schemes in Scotland to August 31, 1927:—

	Completed	Under Construction
1919 Act	25,542	8
Private Subsidy Schemes (1919 Additional Powers Act)	2,324	—
Slum Clearance Schemes	5,872	2,925
1923 Act:—		
By Local Authorities ...	3,694	311
By Private Enterprise...	10,703	2,589
1924 Act:—		
By Local Authorities ...	12,557	12,713
By Private Enterprise...	306	172
Demonstration Houses ...	17	—
Steel houses erected on behalf of Government by Scottish National Housing Company	1,852	282
	62,867	19,000

NEW BUILDINGS IN SCOTLAND

West Fife.—Extension.—The Dunfermline and West Fife Hospital Committee have decided that a wooden extension should be built. The cost will be £2700, and the extension will accommodate 16 beds.

Nairn.—Harbour.—By nine votes to six, Nairn Town Council have decided to take the necessary steps to proceed with the new harbour scheme.

Glasgow.—Aerodrome.—The Corporation are considering various sites with regards to the erection of a Municipal Aerodrome. An estimate by an expert o cost of the scheme is in the region of £50

Ayr.—Library.—The Ayr Carnegie Lib Committee have approved the plans fo extension to the Ayr Library.

Dunfermline.—Extension.—The cere of cutting the first sod in connection wit extension of the Dunfermline and West of Hospital extension has been performe Mrs. Andrew Carnegie and Lady Ver Bruce. The plans of the new hospita adopted, provided for 42 beds, but a fu extension could be made later for an tional building cost of about £7,000.

Glasgow.—Housing.—An offer amou to £86,894, for the erection of 228 tene houses at Ruchill, has been recommende acceptance by the Housing Committee of Corporation. The Corporation are also re mended to accept tenders amounting £53,171 for the execution of works in co tion with the erection of the proposed building between Gallowgate and Lo street.

Paisley.—Extension.—The Dean of Court has passed plans presented by the frewshire Education Authority for the tion at the East Public School of new l ings, providing for eight new classrooms accommodation for 400 pupils.

Castlecary.—Bridge.—Work has comm in connection with the construction of a bridge over the Forth and Clyde Can Castlecary, Stirlingshire. The bridge cost £6,205, and the new approach to bridge will cost between £500 and £600. contractors are Sir William Arrol & Co.,

Dundee.—School.—The Dundee Educ Authority have bought a considerable of ground on the Dudhope estate as a si the new north end school.

Obituary.

The death has occurred, at 127, U grove, Aberdeen, of Mr. Charles Gill, bu

BUILDING TRADE WAGES IN SCOTLAN

The following are the present rates of wages in the building trade in the principal tow Scotland. Every endeavour is made to ensure accuracy, but we cannot be responsible for e that may occur:—

	Masons.	Bricklayers.	Carpenters, Joiners.	Plasterers.	Slaters.	Plumbers.	Painters.	Labourers Masons Bricklay Plasterers

*These prices apply to *new buildings only*. They cover superintendence by foreman and carry a profit of 10 % on the prime cost without establishment charges. A percentage of 1½ should be added for Employers' Liability and National Health and Unemployments Acts, and from 1s. 6d. per £100 for Fire Insurance. The whole of the information given on this page is copyright.

TRADE NEWS

(*Continued from page* 520.)

Boilers and Radiators.

The Travelling Exhibit of National Radiator Company, Ltd., of Hull, fitted with a working installation of the "Ideal" Cookanheat and "Ideal" Classic radiators, will demonstrate on October 3 at Bateman's Park, Matlock. We learn that this firm has recently issued two folders which have been distributed to architects and trade firms. A copy will duly be sent to any firm who have not already received this. One folder relates to the "Ideal" Classic Radiators and sets forth graphically their special features and advantages. These radiators have just been installed in Marlborough House, the new London residence of H.R.H. the Prince of Wales. The other folder is intended for the assistance of trade firms in avoiding chimney-flue connections to heating and hot-water supply boilers which are likely to result in unsatisfactory operation of the apparatus.

Open Anthracite or Coke Fires.

The average person loves the open fire, and while he may not have been aware of the reason for this preference, there is no doubt that his liking for radiant heat as given off from the open fire is well founded. With the "Glow-Worm" open fires, the major portion of the heating surface is nearly vertical and this insures a steady flow of radiant heat in a more or less horizontal direction across the room, thereby insuring the ideal conditions of heating, i.e., the feet are warmed and the head is cool. The "Glow-Worm" open fires are designed to stand into any existing fireplace or chimney recess, and the "Hearth" model needs no fixing at all. Both of these fires are provided with a gas lighter, which for a cost of about a ¼d. will light the fire in from five to ten minutes, and obviate the necessity of using wood or paper, rendering unnecessary the removal of dead embers from the grate. The makers, Messrs. O. Bruster & Richardson, 4, Lloyds-avenue, E.C.3, will be pleased to send illustrated leaflets of this fire.

Fireplaces in Stoneware.

A really attractive catalogue, List F.1927, illustrating various styles of their fusion and salt-glazed (Royal Doulton ware) fireplaces in stoneware, has been issued by the Well Fire and Foundry Co., Ltd., of 15, Berners-street, W.1. Stoneware is produced in one single fire of intense heat, and is not to be confused with faience, a material produced by two light firings. With regard to the salt-glazed ware, some fine colour effects are obtained, the beauty of which is enhanced by the fact that no two pieces are ever exactly alike. Glazed fusion stoneware is made in eggshell and antique glazed surfaces and stocked in various colours. In addition to numerous illustrations of styles of fire, the catalogue contains a colour chart which will be found useful. The catalogue will be forwarded upon application to the makers.

Relaying of Piccadilly.

We learn that the Improved Wood Pavement Co., Ltd., of New Bridge-street, have completed their section of Piccadilly (Piccadilly-circus to Piccadilly-place, which is the most important section) in ten days under contract time.

Change of Address.

The Leeds Fireclay Company, Ltd. (Head Office: Wortley, Leeds), after having their London Office in the Strand for many years, have followed the trend west and taken a block of premises at Leeds House, 2, Cavendish-place, Oxford-circus, London, W.1. The offices are now occupied, and there is being fitted up one of the finest showrooms in the City. The display of Leeds Fireclay products will include Burmantofts terra-cotta (the ground floor front is built of this material), glazed bricks and tiles, and sanitary fittings.

ADVERTISING ARTS.

ADVERTISING to-day, by no means limited to the selling of goods or services, is still principally directed to that end. But in the production of the subtler forms of advertisement, literature and the arts are now called in aid to point a commercial oral. The publicity expert delves in the sands of Time to fill s bucket; its contents moulded to shape he inverts to form rrets for the sand castle of the moment. Ancient art and erature, as well as modern painting, writing, and design, ve found their way into the ranks of advertising arts. There e persons who are reluctant to admit the right of the arts to ll themselves to the uses of advertisement. They assume at the arts are degraded by such occupation. Yet, curiously ough, it is a recognised practice for an artist to exhibit his cture or his sculpture, and even to announce the exhibition newspapers and by means of posters outside the gallery. ne practice is regarded not only as by no means derogatory to ts and the man, but actually as the recognised method of tting in touch with the public who may buy or look at his ork. What is the Royal Academy Exhibition but advertise-ent of Art?

Among the arts, where does architecture stand in regard to vertisement? Tradition assumes that architecture does t resort to advertisement. Apparently, the indignity of blicity applies personally to the architect or to the body of hitects, not to the actual work of art. For a building stands the public eye for a period considerably longer than the nter's picture hangs in the exhibition gallery; longer than musician's poster stands outside the concert hall to attract public to hear him play. It may be said that an architect his executed designs perpetually on exhibition, and so has stant advertisement. But the public usually has no means scertaining the name of the artist responsible for the building cause of the custom (occasionally not observed) preventing architect, alone among artists, from signing his work.

While architecture holds sternly aloof, at least in theory, n anything resembling advertisement of itself, it does not to regard it as inconsistent to bend itself more and more uently to the uses of advertisement for its patrons. The t of buildings for business firms, banks, shops, even public ildings, have behind their erection strong forces of adver-sement. But architecture, while ready to serve purposes of licity, rightly or wrongly refuses to bring into its own ce and interests one of the most potent forces of the age. ould seem that the only admissible system of advertising chitecture, other than the elementary one of setting up a ssional name-plate, is that of cultivating opportunities cial intercourse in order that a few persons, who may at remote date require the services of an architect, may o mind that they once met a friend of somebody's vas said to have built a bank. To some critics this posi-appears far more derogatory to a respectable profession the literary and artistic allusions to cigarettes in the isement pages of the magazines. Professional announce-may from time to time appear in the Press, but usually the technical Press, which some may think is a closed to the majority of potential clients. The most usual publicity received by the ordinary capable, but un-uished practitioner, is his obituary notice. Meanwhile, pers and magazines supply names of super-decorators to undertake the alterations and additions desired by n who has bought an old house. The man who wishes d himself a labour-saving home in his chosen Eden can find a dozen or more enterprising people who will see the thing through for him with taste and discernment. Meanwhile, the architect is left out. The taste and discernment of this kind of firm is the product of a set of individual, anonymous brains merged greyly into a neutral tint which can be coloured with "period" tones as wished by the owner. There is room for such work, but there is also much that would be more appropriately undertaken by the architect. But he is not called in because advertisement is the prevailing way in which the client can get in touch with the services he requires. Whether this condition of things is a good or bad trait in modern life is beside the point. The fact remains that advertisement in some form enters for good or ill into the give and take of the community as at present constituted, and it is necessary that the art of architecture should at least open its eyes to the fact, whether it acts upon it or not.

That the architect should cry his wares, or send up balloons proclaiming his name and qualifications is in no way implied in the suggestion that the architect should take advertisement into account. It may be that having done so he will continue to shun it; it may be that he will evolve some dignified method of his own for utilising the advertising arts for the benefit of his own art. The problem is complicated by the question of the younger architects. At this time of year training schools are enrolling numbers of new students who in course of time will be duly launched with cargoes of theoretical qualifications. The ship may be run down inadvertently at the outset by some larger craft, or haply taken in tow as a dinghy. But the hazards of the high-seas are great, and the lesser craft may gradually drift into the coves and land-locked bays of unimaginative and routine work. Some, perhaps, attempting adventure in the deeper ocean, find themselves on the rocks. Peradventure an amateur yachtsman falling in with some such craft, and perceiving her seaworthiness, puts her into commission. The career of the architect in any case is one of ridiculous chances, partly because, to the ordinary man, architecture is a dead art, or at least one that might conceivably relate to the new Delhi, but certainly not to his own new bungalow at home.

It is true that there is a tendency for some slight acquaintance with architecture as an abstract art to be regarded as part of the equipment of a man of culture, but such an interest in architecture remains, as a rule, abstract and inactive. The position of the architect differs from that of other professional men. In health matters a man instinctively calls in his doctor; concerning his affairs he calls on his lawyer; but he is not equally conscious of his need for an architect's services when building is in question. Moreover, he may be at a loss to know whom he should consult.

Is the future status of the architectural profession eventually to become a more or less academic one, without direct influence on the homes of the people, the reconditioned mansion of the plutocrat, and the common affairs of building? Is it possible that, to secure and maintain its rightful position in the world of to-day and to-morrow, architecture must perforce adapt itself to existing habits and adopt for itself some definite means of publicity? Already architecture as an art is receiving a measure of publicity as an object of comment and criticism. What of the architect himself? At present it is often only when an architect has attained an eminence in which he is already well known that any "advertisement" is his. Whatever solutions are suggested or attempted the problem of contact between the public and the architect,—in other words the advertising of architecture,—is one that must be faced sooner or later in the present age.

NOTES

Badly Placed Houses.

Those who have been away on holiday-journeys this year, have had many opportunities to note the disastrous effects of new buildings on the appearance of beautiful holiday resorts. We noted one glaring instance on the border land round a beautiful bay, whereon have been built two isolated hideous boxes of houses which form conspicuous landmarks from far and near. Unless local authorities can find some means to stop this sort of thing, many of our most delightful holiday resorts will be spoilt and those who benefit by their beauty will be robbed of both money and pleasure. There is a sloping field of corn a little way back from the shores of one of the most beautiful bays in the country which is now pegged out in small building plots, and the sides of the first timber bungalow to be erected there are laid out complete, ready to be raised into position. These plots have the disadvantage of being very inaccessible to both beach and town, with no proper road approach, and at present no water supply. Whilst we have every sympathy with the desire for cheap houses in pleasant places, we are quite sure that by some sort of arrangement between owners of land and purchasers the provision of small houses might be obtained without the sacrifice of the amenity and beauty which are so essential not only to the world at large, but particularly to the money values to be obtained from our many beautiful holiday resorts.

The Birmingham Civic Society.

It is always a pleasure to see the reports of the Birmingham Civic Society, and in the report just issued we must all find cause for much satisfaction in the record of the Society's successful attempt to prevent the removal of the old almshouses at Erdington. This matter shows how well-conducted and persistent effort may avail when it is met with courtesy and consideration, such as was shown to the Society by the Charity Commissioners. The almshouses are apparently to be saved and certain slight additions made to them to improve their residential value; this is to be done by Mr. C. E. Bateman, of Birmingham, who may be trusted to deal with the buildings in a thoroughly sound and sympathetic way. The attempt to save Stratford House in Moseley Road may yet succeed, owing to the consideration of the Railway Company. The suggestion for the formation of a Civic Museum, the improvements in Pershore Road, the cert ficate for the Garden Guild and the ne decorative vases designed by the Societ add to the good already provided i the reports. We give on the facing pag the garden design above referred to.

The Preservation of Barns and Outbuildings.

In reference to our "Note in our issue of September 2 in which we said: "Th interest aroused by the fun created by the Royal Societ of Arts for the Preservation of Ancien Cottages should not lead us to forge the almost equal importance of the fir barns and outbuildings which, in man cases, are of such noble architectura character," Mr. G. K. Menzies, Secretar of the Royal Society of Arts, writes "My Council are fully alive to the valu of these structures, and in the Regulation for the Fund they have used the words ' in this memorandum the word "cottage must be taken to include other building connected with the life of cottages, suc as barns, farm buildings, mills, etc If no attempt has yet been made t deal with barns it is because although th spirit is willing the pocket is weak The remedy lies with the public, or a all events the part of it which professe to care for beautiful rural architectur If they will only contribute to the Fun we shall have the greatest pleasure i preserving as many barns as they enabl us to save; and in sending their con tributions, they may have the satis faction of knowing that practically ever penny goes to the actual work of pr servation, as the Society is bearing th cost of all overhead expenses." We ar glad to know of the interest the Societ is taking in the matter and we hope th public will assist in a very desirable wor

Dublin Civic Week.

Dublin was fortunate its Civic Week, for whi in England the weather w consistently wet, in Dubl the five major attractio upon which the financial success of t week depended, were all carried out fine weather. Unprecedented crow watched the Military Tattoo on t Lansdowne-road Football Ground, whe the huge new concrete stand was fill to overflowing. The Town-Planni Exhibit was well patronised, and the first time the public had an opp tunity of seeing the work of the Sch of Architecture attached to the Natio University. The School has grea increased in scope since Professor R. Butler was appointed two years ago, a the standard of second year w reached a very creditable level.

Abolishing Road Signs.

We congratulate the Sl Mex Company on their cision to abolish t enamelled-iron road si The enamelled-iron is seldom or never a th of beauty, and when, after exposur the weather, the enamel begins to s

An Old House in Fuenterrabia;

Charity House, Lenham.

off, leaving patches of rusty surface, it becomes positively unsightly. Far too many objectionable signs, enamelled and otherwise, still litter the countryside, and we hope that the public-spirited example of the Company may be widely followed.

Electricity Development.

The publication of the Electricity Commissioners' scheme for the electrical development of London and South-East England on the same day that London was enveloped in fog, may have justified hope that we are passing from a steam age to an electric one, when our railways will be electrified, when factories, warehouses, offices and dwelling houses will be provided with cheap supplies of electricity and when the winter fogs of cities will not have added to them the smoke of the domestic and office fireplaces. The scheme is part of a plan for co-ordinating the electrical service of the country, with the result that the price of electricity, it is stated, will be reduced to an average of 1¼d. a unit. Under the present scheme, which embraces an area of nearly 9,000 square miles, the number of generating stations will be reduced from 135 to 27, and finally to 18. The other stations will be changed into transforming stations. The cost will be £12,300,000, in addition to which the London and Home Counties Joint Electrical Authority will spend £2,000,000 on second transmission lines. To offset this, however, electricity undertakings will be able to save £5,000,000 under the scheme in the five years 1929–34, and the total savings will amount to £1,500,000 a year.

Decorative Motif.

Decorative artists are not lacking in ample material nowadays as *motif* for beautiful and interesting work. Those of our readers who are interested in decorative design will see a charming subject on a wedding gown which is exhibited at Lady Duff Gordon's new dress showrooms. The lines of veil and dress make very pleasing decoration, which is emphasised with some distinction by the ornamental details such as the lines of the necklace.

Commons Preservation.

The public generally will strongly support the appeal of the Commons Preservation Society for the retention of some 4,000 acres, including Witley, Thursley, and Royal Commons for the enjoyment of holiday folk, which would be impossible if this great area of beautiful country is taken over for military purposes. It surely ought to be possible to acquire all necessary military facilities without robbing the public of such valuable assets to the amenities of life.

The Late Henry Lovegrove.

Many readers of *The Builder* will regret to hear, as we do to record, the death of Mr. Henry Lovegrove, F.S.I., F.R.I.B.A., who until recent years was a well-known figure in most of the societies representing architects and surveyors. We give on another page some notes of his career, from which it will be realised that during a long life and practice, he had held many important offices, while until the last he took a keen interest in professional affairs. He was a life-long reader and frequent contributor to our pages of letters and items of interest. Few of his many friends and acquaintances could have failed to appreciate his character, and those who knew him well will not forget his courtly bearing and his kindly nature.

GENERAL NEWS

Professional Announcements.

Mr. D. H. Roberts, L.R.I.B.A., has removed from Park-street to Church-street Chambers, Wombwell, at which address he will be pleased to receive trade catalogues.

Mr. Percy Wilfred Ladmore, chief assistant to the borough surveyor and water engineer of Newport, Monmouthshire, has been appointed borough surveyor and water engineer of Morecambe.

Housing and Health Exhibition, Glasgow.

The Housing and Health Exhibition at present running in the Kelvin Hall, Glasgow, is, it is reported, proving most successful. The display of houses, building materials, furniture, furnishings and domestic appliances has evoked considerable interest. Deputations from numerous housing committees of local authorities throughout Scotland have visited the exhibition and made a close survey of the display of building materials and the latest improvements in household appliances. The exhibition runs until October 15.

Covent Garden Improvement Scheme.

The existing market at Covent Garden is to be modernised and extended, all idea of transferring it to a different site having been abandoned. This fact was announced at the annual meeting, at the Tavistock Hotel, of Beecham Estates and Pills, Ltd., the owners of the market. Sir Arthur du Cros stated that, in view of the opposition to the Bill for the transfer of the market to the site of the Foundling Hospital, Bloomsbury, the company had no alternative but to withdraw it. The board would have preferred from a business point of view and for financial reasons to establish the market in a new and better position. They had now decided to modernise the existing market. There is, as yet, says the *Morning Post*, no scheme drawn up for the improvements, no decision having been reached on any of the details, as a Bill will have to receive the sanction of Parliament before the work can commence.

Thomas à Becket's Cottages, Worthing.

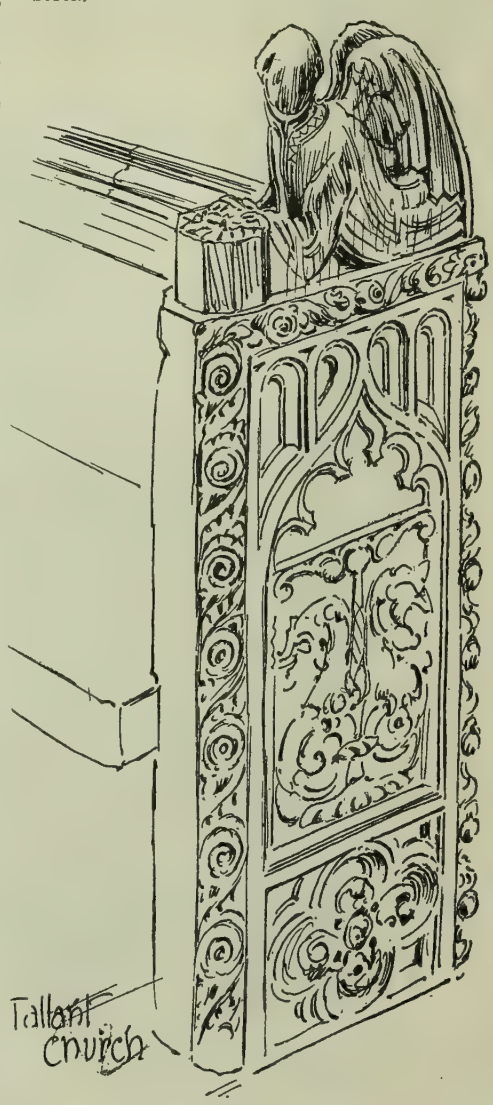
The organising of a fund for the preservation as a local historical monument of the three ancient dwellings known as "Thomas à Becket's Cottages," at West Tarring, near Worthing, will be discussed at a special meeting which the Mayor of Worthing is calling for November 3. These cottages are not so old as their local name indicates, but they are believed to date from the 14th century at the earliest, and are considered exceptionally beautiful examples of their kind. Lately they were offered for sale. The matter was brought to the notice of Mr. G. K. Menzies, secretary of the Royal Society of Arts, who, on behalf of the society, guaranteed to make up any possible deficiency in the purchase money. Then the Mayor of Worthing put forward the suggestion that the cottages should be permanently preserved and maintained as a monument, and it is hoped that this object may be achieved as a result of the coming meeting.

Future of South Africa.

"Town Planning Problems in South and West Africa" was the subject of an address given by Mr. Albert J. Thomson, F.R.I.B.A., of Lagos, West Africa, at the Edinburgh Rotary Club's luncheon in the North British Station Hotel. Mr. Thomson, who has been engaged in town planning work in Africa for the past seven years, speaking of the need for town planning in South Africa, said many new municipalities in that country had been sending representatives over to study town planning in this country and on the Continent, and he was sure that many of the faults of the past would in time gradually be eliminated. Many things were frequently done in the best spirit by municipalities, which, had they been submitted to someone with a knowledge of town planning, might have been altered with advantage.

COMPETITION NEWS

University Buildings, Perth, Western Australia.



The competition for the new University Buildings, Perth, Western Australia (particulars of which were given in *The Builder* for January 14) has now been decided. The assessors (Professor Leslie Wilkinson, F.R.I.B.A.; Mr. A. R. L. Wright, L.R.I.B.A.; and a member of the University Senate) have awarded the premiums of £300, £200 and £100 as follows:—Messrs. Rodney H. Alsop and Conrad H. Sayce, Melbourne, Australia, 1; Mr. Donald H. McMorran, 34, Butler-avenue, Harrow-on-the-Hill, 2; Messrs. Gummer and Ford, Auckland, New Zealand, 3.

COMPETITIONS OPEN.

Municipal Buildings and Business Premises, Herne Bay. Premiums: £150, £100 and £50. Professor A. E. Richardson, F.S.A., F.R.I.B.A., assessor. Apply Clerk to Council, Westminster Bank House, Herne Bay. Deposit of £1 1s. required:	Particulars published in Sending "Builder," in date.	July 8 Oct. 10.
Municipal Buildings, Wimbledon. Premiums: £200, £150 and £75. Mr. H. V. Ashley, F.R.I.B.A., assessor. Apply Mr. Herbert Emerson Smith, LL.B., Town Clerk. Deposit of £2 2s. required:		July 15 No v. 30

Deep-water Quay for Cherbourg.

The Cherbourg Chamber of Commerce has decided to spend 28,648,000 francs (£231,000) for the construction of a deep-water quay at which the largest steamers will be able to berth.

Hereford Cathedral.

Sir,—My committee requests that y should let your readers know that t society is in no way responsible for the wo now in progress on the central tower of He ford Cathedral. The Society was consulted to this work, but its advice is not being f lowed.

A. R. Powys,
Secretary
The Society for the Protection of Ancien Buildings.

Warming of Churches, Public Buildings a Places of Assembly.

Sir,—With reference to your recent arti on this subject, may I be allowed the opp tunity of expressing a view in favour of h water systems for this class of work? Wh steam has much in its favour under cert applications as a heating medium, for bui ings in which a sensitive control is desira without resort to valve adjustments (to me the variations in outside temperature) ho water systems enable this control to be m readily obtained, within the limits of t boiler-house itself. After the attendant h obtained the necessary experience, a suita adjustment in firing conditions can give qu a wide range in flow and return temperatu to avoid overheating.

If, however, a gas or oil-fired boiler c be adopted, this allows of very close adju ments in this respect and gives the adva tage of quick heating up from cold co ditions. It should also be taken as a poi in favour of hot-water systems under inte mittent periods of working, that there is l liability to corrosion in the boiler and pip than with a system which is not complete filled with water while standing idle.

W. H. Dupen, M.I.H.V.E., F.R.S.A.

MANCHESTER TOWN HALL EXTENSION, MUNICIPAL OFFICES, AND PUBLIC REFERENCE LIBRARY COMPETITION

On Tuesday, September 27th, the announcement was made that the design of Mr. E. Vincent Harris, of London, had been selected by the assessors as the best submitted in the final competition for the proposed Town Hall Extension and Public Free Reference Library at Manchester. The assessors, Mr. T. R. Milburn, F.R.I.B.A., of Sunderland; Mr. Robert Atkinson, F.R.I.B.A.; and Mr. Ralph Knott, F.R.I.B.A., who were appointed by the President of the R.I.B.A., at the request of the Corporation, had only 64 sets of designs to consider in the first competition, although all architects of British nationality were invited to send in drawings. The smallness of the response may have been due to the nature of the problem and the awkwardness of the site. The land reserved for the erection of the proposed buildings is not far from a right-angle triangle, with a truncated apex on the south side. The base is formed by Lloyd-street and the present Town Hall building, on the north side. On the west side is Mount-street, which runs from Albert-square, in which the Town Hall stands, and passes Lloyd-street approximately at right angles. Peter-street lies on the short south side of the site, with the Midland Hotel extending alongside and overlooking the area. The easterly frontage or hypotenuse is formed by a wide new thoroughfare, to be called West Mosley-street, and by St. Peter's-square, the open space in which stands the Cenotaph to the memory of those who fell in the War. In the south-eastern corner of St. Peter's-square, opposite to the site, is Oxford-street, one of the principal approaches to Manchester from the south, and the street along which a distant view of the proposed new buildings will be best obtainable. For these and other reasons, the St. Peter's-square side of the site is obviously one that is particularly important and one that affords very special opportunities. This side of the site is, however, as already stated, only partly occupied by the square, the remainder of it being in West Mosley-street. The conditions of the competition expressly stated that the southern portion of the site should be reserved for the library building, and that the extension of the Town Hall and the municipal departments should occupy the northern part, adjacent to Lloyd-street and the present Town Hall. Lloyd-street is a quiet thoroughfare, away from the busiest part of the traffic, and just the kind of street in which the main entrance to the Municipal Departments might be placed.

The drawings submitted in the first competition were received, in accordance with the instructions, on January 8th last. From those who sent in designs, the following six firms were selected to take part in the final competition:—

Messrs. Bradshaw Gass and Hope (Bolton); Messrs. Collcutt and Hamp (London); Mr. J. B. S. Cowper (London); Mr. H. S. Fairhurst (Manchester); Mr. E. Vincent Harris (London); Mr. E. Berry Webber (London).

The proposed Town Hall Extension and Municipal Offices were to contain a new Council Chamber to provide seats for about 190 aldermen, councillors and officials, in addition to space for the public, the Press and for a few distinguished visitors. In addition, accommodation had to be provided for the gas, water, electricity, baths, markets, parks, public health, rivers and cleansing committees. Showrooms for the electricity and gas departments and a large apartment for accounts and inquiries were also required. It was stated that a bridge should extend across Lloyd-street for the purpose of providing communication between the Lord Mayor's state apartments in the existing Town Hall and the Council Chamber. In addition to an ante room and the usual retiring rooms, separate access for the public to the council chamber had to be contrived.

From the commencement, it was realised that it would be best for the library building to be self-contained and quite independent of the Town Hall extension, and instructions were given to the competitors accordingly. The accommodation required in the library was as follows:—

Basement and Lower Ground Floor.—Packing room, binding room, print room, newspaper file room, porters' and cleaners' staff room and store, photographic room (including dark room), lecture hall (including lecturers' retiring room), staff rooms, library records room and strong room.

Ground Floor.—Lending library and foreign library. It was suggested that the remainder of this floor should be allocated to a book store. The book store was to have direct connection by book lifts and staircases with the main reading hall, technical and science library, commercial library and music library, etc., above.

First Floor.—The main reading hall (13,600 sq. feet or more), the technical and science library, the commercial library, the music library (including sound-proof trial room), the map room, the printing room, the exhibition room and three study rooms.

Second Floor.—Special collections in two long rooms, rare books and manuscripts committee room (with toilet), and the apartment of the chief librarian, with waiting room.

Third Floor.—Order and cataloguing room, supplies and accounts, clerical room and apartments for the deputy librarian branch superintendent and the library school.

In the conditions for the final competition, it was stated that the drawings were to be sent in not later than the 16th of July last, and that no perspective views would be considered. The following extracts from these conditions will serve to indicate the nature of the final instructions given:—

"The special attention of the competitors is called to the instructions of the first competition that it is the aim of the Corporation to develop the site to its fullest reasonable capacity, which includes the provision of ample additional floor space in one or more floors over and above the schedule accommodation for the Municipal Offices, and an scheme for future possible extension of the departments. The extent of this additional floor space must be left to the discretion of the competitor as may, in his or their judgment, best fit the architectural development of his or their design. It may, however, be pointed out that the Corporation have in mind that such additional space may temporarily be used for commercial purposes. No special provision need be made

or separate entrances or lettings, as it is xpected all additional space will ultimately evert to municipal use."

"If any space above the library is con-idered necessary for architectural treatment should be left for future extension of the ibrary."

"It is desired that the competitors should tate in their estimate their estimate for the ost of the additional floor space and exten-ion of departments based on a price per ube foot, and competitors are reminded that he estimate for the library must be eparate."

"The attention of competitors is also rawn to the clauses in the first competition, hich state that it is anticipated that the eference library will be the first section of he scheme to be built, and should be an ndependent and self-contained entity, whilst orming part of the general scheme."

"It would be desirable to have the show-ooms on the ground floor, if it is possible; ut this suggestion must be secondary to the eneral planning of the departments having view cost and other considerations. It is esirable, however, to have some outside iew windows on to Mount-street or St. eter's-square."

Certain extracts from notes made by the hief librarian were also transmitted to ompetitors for their consideration.

It is to be regretted that the whole of hese particulars were not placed before those ho took part in the first competition. Their sk would have been rendered much simpler, nd when one realises what a competitor in competition of this kind has at stake, one annot help but feel that in fairness to them nd to everyone else concerned, a real effort hould be made to give to each one the fullest ossible information that can be given. In his connection, one cannot well avoid ex-ressing some comment on the evasive and nhelpful replies given to certain very roper questions put in the first competition -"Left to discretion of competitors," etc. tupid questions are usually asked by the nexperienced, but there were other ques-ons that demanded more serious attention. uestion No. 19 was: "How many superficial et of bookshelves should be provided?" The nswer was: "This will be determined by the anning of the department, and competitors ill be expected to show approximately on eir plans the suggested stacks." Then me question No. 20: "How many books ould have to be stored?" and the answer: ee answer No. 19." This was not very lpful; in fact, almost callous, and yet in e final competition the answer that should ve been given months earlier for the first mpetition was stated to be "approximately 0,000 volumes." Yet No. 23 of the condi-ns for the first competition read: "Each mpetitor must give an estimate of the cost his design, including fixed fittings," etc. is, naturally, included the steel bookstacks, ich usually form part of the structure. It to be hoped that in future competitions se responsible for supplying information i the answers to questions will be a little re considerate and imagine themselves in position of those who are endeavouring compete on the right lines.

n examination of the drawings submitted the final competition proves that the ssors have come to the right decision, so as they are concerned. The design of E. Vincent Harris is in every way a terly handling of a difficult problem. He gnised in a way that the majority of the rs did not that the Town Hall exten-and the library building were so widely rent in the nature of the treatment de-ded by their requirements, if these were e met in the best possible way, that it his duty to do what he could to disso-the two buildings and to divorce them ar apart as the limitations of the site d permit. He realised as some of the r competitors also did that the main ing hall should be circular, like the large ing room of the printed books depart-ment at the British Museum and the Library of Congress at Washington. He knew that this decision would affect the whole of his library plan; but, from a purely practical point of view, he may have gone too far when he allowed his decision to induce him to make the entire library building into a rotunda. From a purely architectural and spectacular point of view, this treatment may be ideal, but, after all, buildings are erected to be used rather than to be looked at; and it is for librarians to decide whether it is desirable to have the long galleries and departments curved around a large circular structure, when it is so important to maintain the best possible supervision, at the minimum expense. Possibly, the assessors may have satisfied themselves that this is the case, but it would be interesting to have a definite pronouncement on this point by those best qualified, on account of their experience of library management, to express an opinion. In no respect has the genius of Mr. Harris, as an architect, been more clearly demonstrated than in his conception of the best external treatment of the Town Hall extension, in view of its proximity to the present Gothic Town Hall building, designed by Alfred Waterhouse. His library rotunda is of late Renaissance type, encircled by a circular Doric colonnade, near to the summit of the surrounding wall, but the Town Hall extension is a particularly charming combination of early Renaissance and mediæval characteristics. In this way he bridges the gulf between the two extremes and provides a building that may stand with either without disconsonance. It should, however, be observed that the new buildings do not rely upon one another, in order to produce a combined effect. The Town Hall extension would stand perfectly well, without the library rotunda, and would, in fact, appear infinitely better without it, as the rotunda has had to be kept so near as 17 feet or thereabouts to the municipal building. The library rotunda, moreover, would be seen to even greater advantage if it could only stand so as to close the vista, formed by a street or avenue, just as the Grand Opera House in Paris does at the end of the avenue which bears its name. Manchester has a world-wide reputation as a city with a few good buildings badly placed. The Manchester Corporation could very well employ Mr. Harris to erect this or some similar library building on a site such as that described, and also arrange for him to utilise the whole of this site, for municipal purposes, as it is common knowledge that in the near future it might well be so used. This was the wise policy adopted by the London County Council in their great County Hall, and Manchester might well think to-morrow as London thought yesterday. The interior of the site could easily be left for future development in a manner that it would not be difficult to explain, and the main façades to the four frontages could be erected as it might be found expedient to do so. This would, we venture to think, be a wise and far-sighted policy and one that would assist Manchester to prove that it is sufficiently progressive as to be appreciative of good advice in matters of town planning and that it understands that good buildings, however excellent they may be, must have a suitable situation and setting if they are to be seen to the fullest advantage. In this way, much might be done to remove the reproach from which the city has long suffered. The high-pitched roofs of the municipal building of Mr. Harris accord well with the similar roofs of Alfred Waterhouse's structure, and the spire of the present Town Hall will not break the skyline discordantly. Mr. Harris and some of the other competitors are to be commended for the skilful manner in which they have placed the new council chamber axially with a bridge over Lloyd-street, which is a continuation of the main corridor of the present Town Hall building. In this way, a dignified, stately and convenient approach would be obtained from the Lord Mayor's State Apartments. Convenient, central positions have also been found for the accounts office and the gas department showroom. A place for the electricity department showroom has been reserved on the West Mosley-street side of the site. Mr. Harris is also one of those who has so terminated the north-eastern angle of the site as to make it form the southern side of a small quadrangular open space, opposite to the east entrance to the Town Hall. This is, however, only one of many instances which might be quoted to show how thoughtfully this design has been considered.

The presence of the Gothic design of Alfred Waterhouse has made two of the finalists conclude that either a somewhat similar treatment or mediæval motifs should be introduced in their schemes. Reference is made to the drawings of Messrs. Collcutt and Hamp and those of Messrs. Bradshaw Gass and Hope. The latter firm has ventured to adopt a free treatment with Gothic detail, which, nevertheless, completely breaks away from the old, conventional lines, whilst retaining both good proportion and breadth. In this design, the circular form for the main reading hall was not adopted. Possibly, this may have been due to the difficulties of treatment which it produced, but the long rectangular hall is so inconvenient from the point of view of both readers and librarians that its retention would not be advisable in an apartment of such large dimensions.

Mr. E. Berry Webber, Mr. H. S. Fairhurst, and Mr. J. B. F. Cowper have all produced late Renaissance treatments, in which no serious effort is made to bring the buildings into accord with the Gothic structure of Alfred Waterhouse No approach to the steeply pitched roofs and early Renaissance and Gothic details of the scheme of Mr. Vincent Harris is to be found in their designs. They have all treated the Gothic work of Waterhouse very much as Inigo Jones and Sir Christopher Wren treated the old mediæval Cathedral of St. Paul, which preceded the present structure. Their designs, nevertheless, have been most carefully considered, and the dignified, massive and broad effect of Mr. Fairhurst's drawings is specially noteworthy, but all these designers have more or less sought to bring the two dissimilar buildings into one unified scheme, and this was obviously diametrically opposed to the intention of Mr. Vincent Harris, which was, we venture to think, unquestionably the right one. Apart from these differences, there are points of resemblance between the arrangements of the plans of both Mr. Fairhurst and Mr. Harris; for instance, both place their council chambers on the axis of the main corridor of the present Town Hall, and separated from it only by the connecting bridge of inter-communication across Lloyd-street. Both also contrive the north-east corners of their municipal buildings so as to form the southern side of a small quadrangular open space, at the east end of the present Town Hall. Although the acoustic properties of the council chamber are so important, Mr. J. B. F. Cowper appears to be the only competitor who has taken the trouble to indicate graphically upon his drawings what the acoustic effect would be.

Mr. E. Berry Webber, the designer of the proposed new Art Gallery for Manchester, has also adopted a more or less radial arrangement for the main reading hall of his library, but in his case the apartment has been made elliptical and in this way the curved southern façade of his design, facing the Midland Hotel, has been obtained.

The drawings were exhibited to the public on Monday, October 10th, and on following days. It is to be hoped that at this exhibition not only the report of the assessors, but also those of the competitors will also be exposed for examination. The Manchester City Council do not appear to realise that it is both customary and desirable to exhibit the reports as well as the drawings. We recollect that at the time of the recent competition for the City Art Gallery, it was stated that the reports of the competitors were regarded as confidential and that instructions were given that they should not be exhibited. The reports are as essentially as the drawings part of the material required by the assessors in order to make their award.

ILLUSTRATIONS

Manchester Town Hall Extension, Municipal Offices, and Public Reference Library.

We published in our last issue a perspective view of this design, which was awarded first place by the assessors in the recent competition. We give this week reproductions of the elevations, plans and sections, together with a special critique on the competition, beginning on page 532.

Mr. E. Vincent Harris, F.R.I.B.A., is the architect.

New Offices of the Midland Bank.

A description of these new premises is given on page 551.

Proposed Head Offices, Hay's Wharf.

This proposal, for formal head offices from part of the warehouses at present existing as Hay's Wharf, has been temporarily suspended while the directors consider the project of an entirely new building. Should the proposal here shown be carried out, the lower stories will be cased with Portland stone and the cement dressings removed from the upper stories, leaving the stuc brickwork plain and unadorned. The window over the cart entrance is that of the new board room.

Mr. H. S. Goodhart-Rendel, F.R.I.B.A., is the architect.

A House at Camberley.

This house, for Mrs. F. Davies, is built of brick, with a tiled roof and floors of oak. The fireplaces are of oak and brick and the interior walls of sand-faced plaster.

The contractors were Wells, King and Co., of Camberley, and the following were sub-contractors :—Thomas Potterton, Balham, heating; Godwin, Woking, steel casements; Mitchell's, purple stock bricks; Swallows, Cranley, tiles.

The architects are Messrs. H. R. and B. Poulter, FF.R.I.B.A.

The Drive Hotel, Eastbourne.

The drawings illustrated were prepared for the Peoples' Refreshment House Association, Ltd., for a site which they have purchased at the foot of the Downs on the outskirts of Eastbourne, where a large housing scheme is being developed. The building is designed principally for the provision of refreshments for the general public and to be used as a club for the surrounding district, a large club room being provided on the first floor and a billiard room on the ground floor for this purpose. The grounds are also being laid out for bowls and tennis, together with spacious tea lawn and terraces. The interior will be carried out in the old Sussex barn treatment, with large oak beams, rough plastered walls, and open brick fireplaces.

The exterior treatment allows for a random stone flint of Sussex greenstone, with Atlas White stucco above, finished with a rough trowelled face, with 2-in. multi-coloured facing bricks to the main portion to give colour and relief to the whole façade. The stacks are in special moulded bricks, being placed symmetrically on either side of the entrance. The roof will be covered with hand-made sand-faced antique tiles, whilst the tile hanging to the gables will be in silver greys.

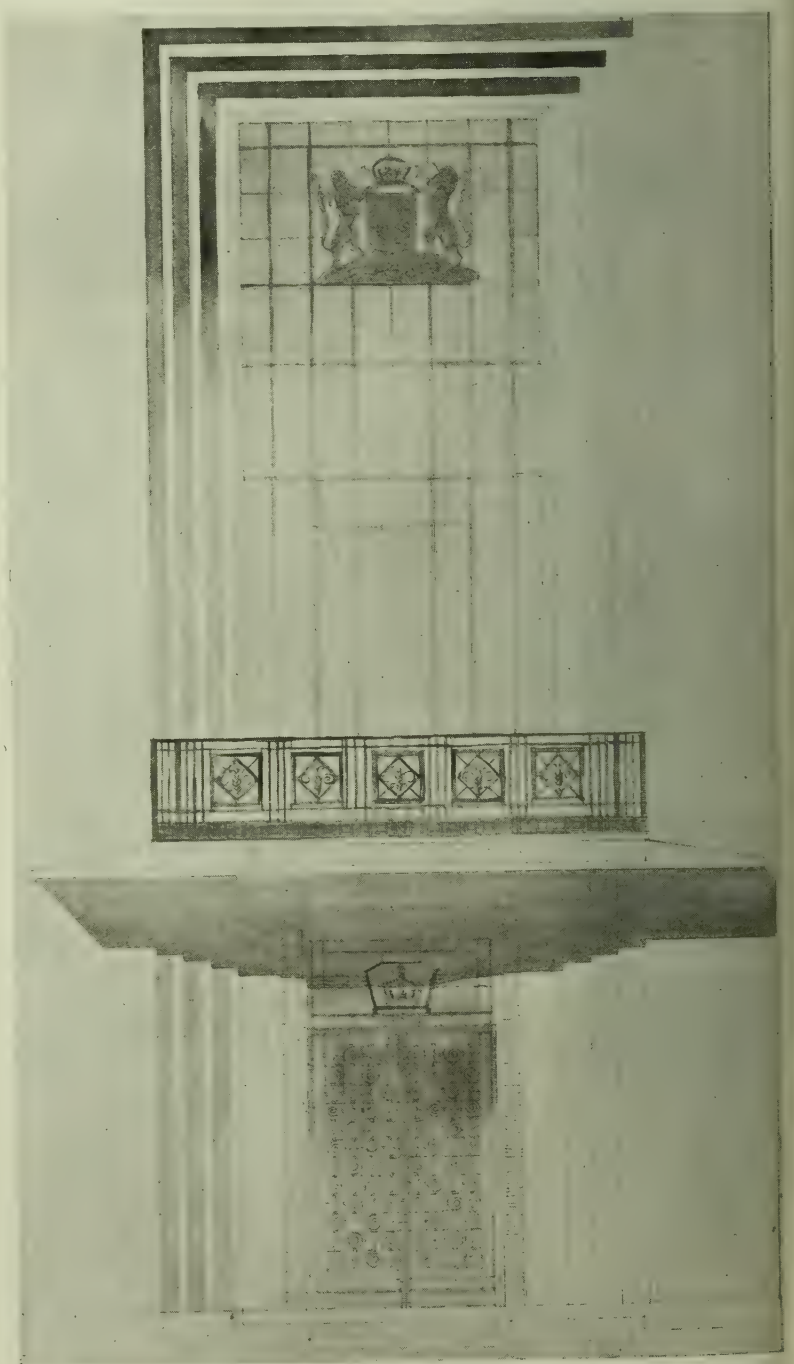
Mr. Peter D. Stonham, F.R.I.B.A., F.I.San.E., of Eastbourne, is the architect.

Memorial Church, Llanwygm, S. Wales.

This church is built of local stone and is roofed with green Velenhelli slates. The chancel, choir stalls and reredos are in oak. Accommodation is provided for 124 worshippers. The estimated cost of the building, which is to be commenced in May next, is £6,500.

Mr. Edward Rimmer is the architect.

New Premises, Clifton Street, E.C.

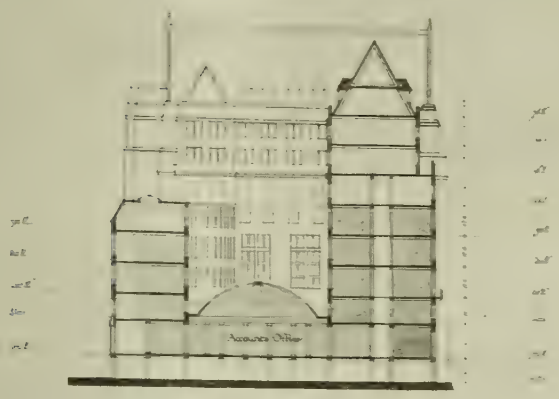


These premises have been designed for a firm of printers for use as offices and works. The front elevation is in artificial stone and brick. The contractors were Messrs. Walter Lawrence and Son, Ltd., and the sub-contractors Powers and Deane Ransomes, Ltd., steelwork; the Patent Impervious Stone Co., Ltd., artificial stone; T. and W. Ide, wrought-iron sashes and glazing; Davis, Bennett and Co., sanitary work; Joseph Stone, handrailing, etc.; Yannedis and Co., ironmongery; International Asphalt Co., asphalt and granolithic floors; John Wright and Co., heating; Waygood-Otis, Ltd., lift.

Mr. F. Lindus Forge, F.R.I.B.A., is the architect.

Flats, Hazelbourne Road, Balham.

This block of residential flats is being erected on a site at Hazelbourne Road, at the junction of Cavendish Road (between Clapham Park and Balham). The buildings will be of fire-proof construction throughout. There will be service balconies at the back, with separate trades' entrances to each suite. An open court faces Hazelbourne Road, entrance to which is from a central gateway. The suites are varied in size, and consist of dining-room, and two or three bedrooms, kitchen, etc., with the latest labour-saving appliances. The material for the principal elevations will be multi-coloured bricks, with stone dressings, cornices, etc. The roofs are to be covered with green slates, capped with red tile ridges.



The architect is Mr. W. H. McLachlan, Colliers Building, Balham Hill.

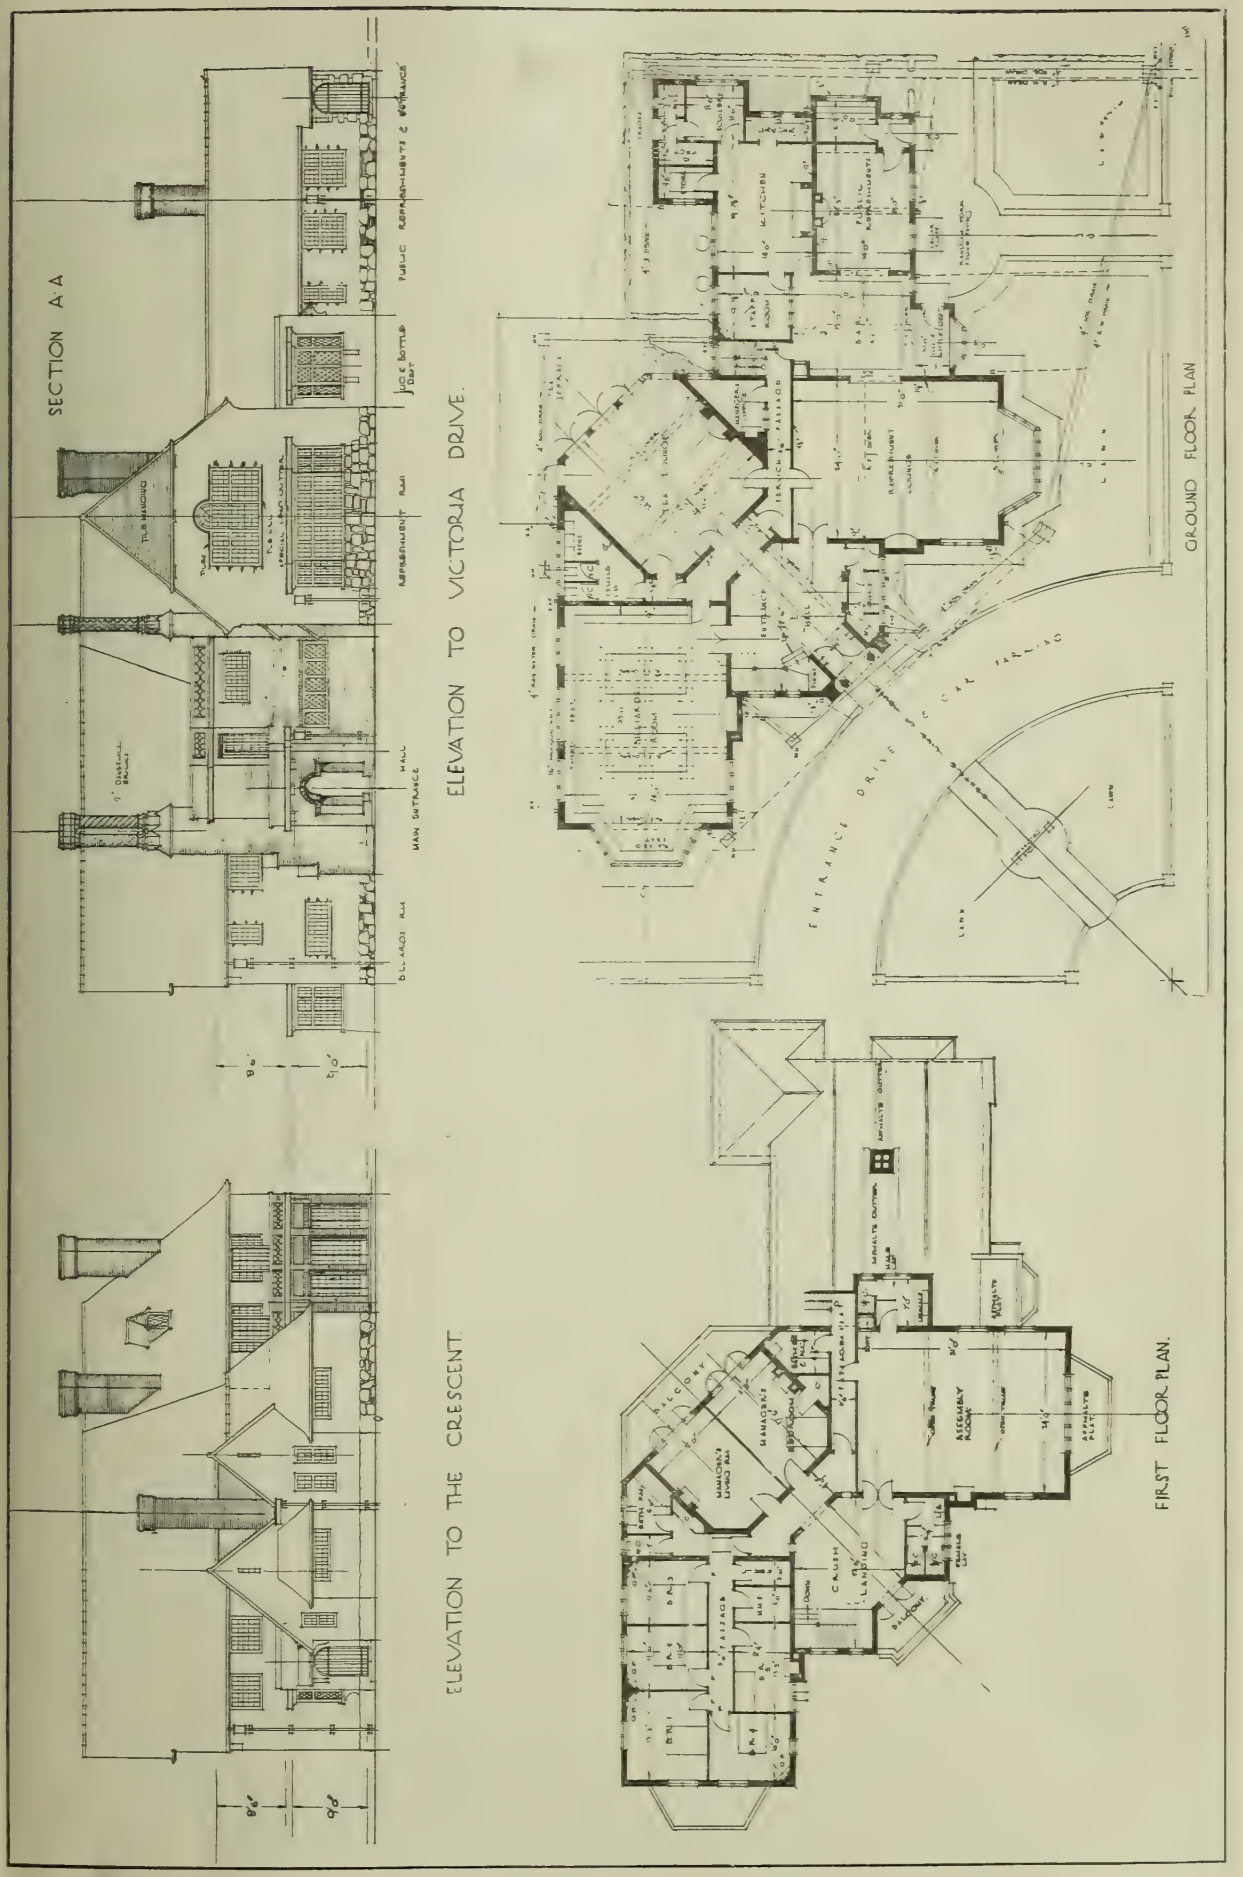
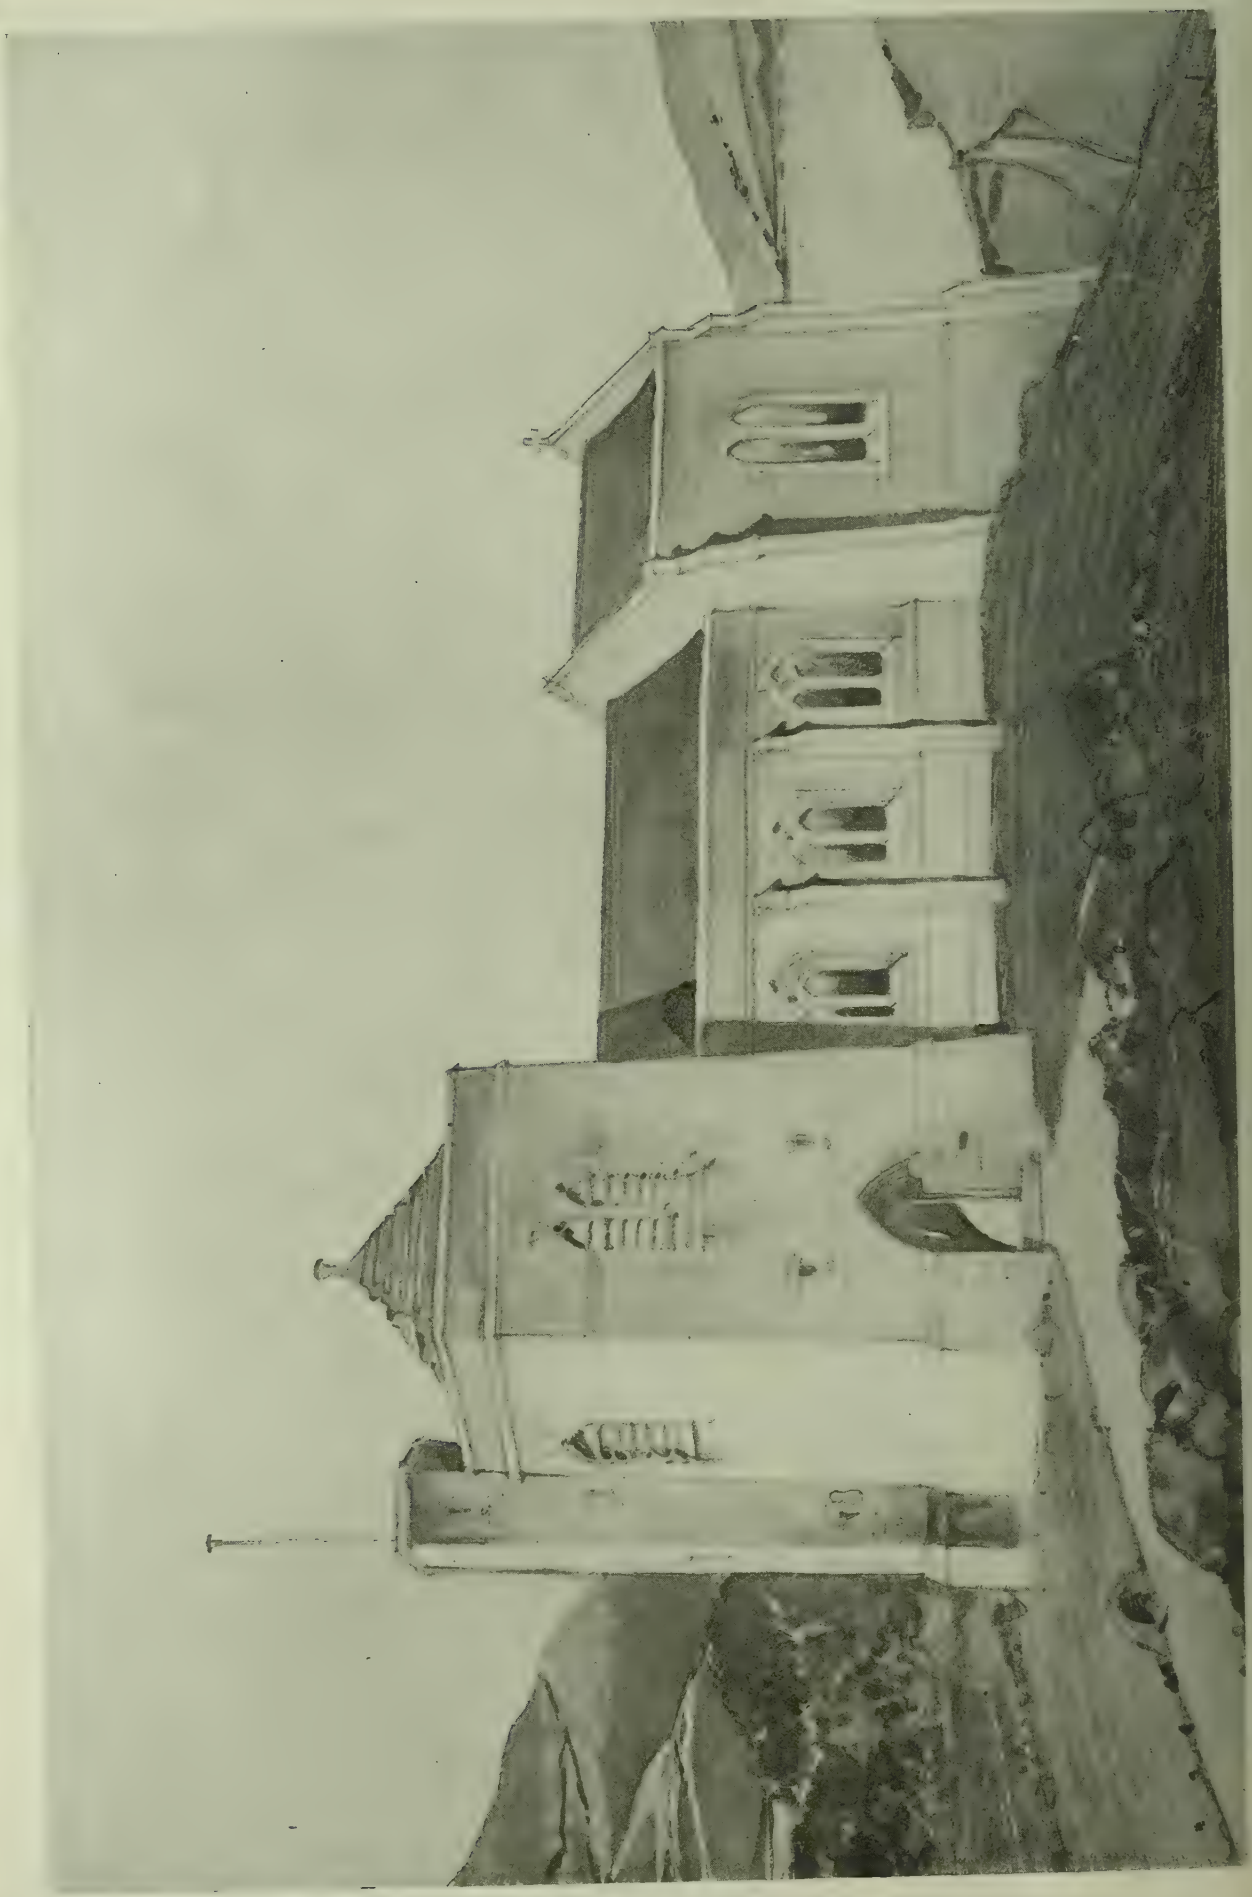
Reinforced Concrete Grand Stand for a Racecourse; Design Placed First.

By Mr. H. Kendall (University College School of Architecture). (*See page* 534.)



This design was awarded the "Concrete and Constructional Engineering" prize this year at the London University School of Architecture. The assessors were Mr. H. V. Lanchester, F.R.I.B.A., Professor A. E. Richardson, F.R.I.B.A., Mr. C. Lovett Gill, F.R.I.B.A., and Mr. Hector O. Corfiato. The prize is awarded annually for the encouragement of design in concrete.

A House at Camberley Heath. Messrs. F. R. & B. Poulter, FF.R.I.B.A., Architects.



Proposed Hotel, Victoria Drive, Eastbourne.

Mr. Peter D. Stonham, F.R.I.B.A., Architect.

PARTHENON STUDIES.—VIII.

By W. R. LETHABY.

E GREAT SCULPTURES AND EAST PEDIMENT.

heidias and the Sculptures.—Until re-tly it has been accepted as following from ords that the great artist who was re-nsible for the external sculptures was idias. Then, in the time of new theories, bts have been raised and arguments made show that the wonderful works cannot be the craftsman to whom they are tradi-ally attributed. Pheidias, it is said, mainly rked in gold and bronze. He could not e done with his own hands more than the nense gold and ivory statue of the interior. style, as that work shows, was not free n archaism.

According to Dr. Hans Schrader, who has ently written at length on the subject, the est guide for the style of Pheidias is the d and ivory Parthenos, and next to that Demeter identified by Kekulè and a re. "He was rooted in archaism, but tured under Ionic influence, and was a neer. At the Parthenon we may suppose t besides executing the Parthenos he se the other sculptors and put them to rk." Even the design of the pediment ups, however, was not his. Now the very tue of Demeter, taken as a criterion for style of Pheidias, is the figure which, as howed in my last section, is of the same e as the Demeter of the eastern frieze of Parthenon. Consequently it is evidence and not against, the authorship of idias.

The argument to show that the great ivory ge was of a more archaic type than the ernal sculptures is only impressive to those o can believe it. It has been urged, on the ntrary, by other scholars that the column ich supported the ivory arm of the image ast have been *later* than the time of eidias. The reliefs on the shield of the ddess might easily be thought later than e frieze, while the reliefs on the pedestal of image were very like the frieze. Again, existing works which most closely re-mble the Parthenos are the Caryatides of Erechtheum, which, as everyone knows, e a generation later than the Parthenon. e great size and supreme religious purpose the cult image made dignity of pose essen-l, and a traditional type had to be accepted reinterpreted. As before said, I see in considered combination of gilt bronze with ished marble a similarity to the use of ry and gold. The sculptured figures were rned with earrings, bracelets, brooches of nze, and at least one figure had a neck-e, similar to the gold adornments of the y figure. The expression of dignity with thful freshness is common to the image the sculptures.

The treatment of the ivory flesh; arms ghty yet soft and flowing, creases in the s, the feet showing under the skirt; the e and drapery; all seem to be in the style the sculptures. To me, not any difference, kinship and oneness of spirit, are the ious facts.

Mr. Schrader argues that the sculptures mble those of the temple at Olympia, and would assign the pediments of the Par-non to the two sculptors who are said to ve wrought the pediments of the temple Zeus. Paionios had made the model for sculpture of that temple *circa* 475. He de-ged and executed the west pediment of the henon; Alkamenes was responsible for res in the west pediment at Olympia and uted the east pediment of the Parthenon. idias executed his Zeus [at Olympia] 450 B.C. Such is the theory. Years ago I arked of the Parthenon sculptures: "Some her light may be gained by comparison h the recently discovered sculptures of mpia, which, although they are more aic in style, have much in common as positions with the pediments of the Par-on. The relation of the two works is not settled, but undoubtedly one of them derived much from the other." The paraliels are so many and so close that one must have practically imitated the other. In the east pediment at Olympia, central groups were divided off from spectators by chariots, as in the west pediment of the Parthenon; pairs of figures are cut in single blocks in both works, and in both several figures resemble one another in attitude. Groups of Centaurs at Olympia are very similar to metopes at the Parthenon, and there are close likenesses between the metopes of the two temples—compare especially Athena seated on a rock in both sets.

Schrader accounts for these striking resemblances by supposing that the Olympia sculptors went on to Athens, and that the Parthenon sculptures were designed and wrought by them. This practically eliminates Pheidias. Notwithstanding all the general resemblances between the two works, the craftsmanship and character of the two great works are so different that I could not think it possible that this should be the explanation.

To me the sculptures of the Parthenon have their more intimate affinities of style with the acknowledged works of Pheidias—the Parthenos and its pedestal and the Zeus of Olympia with its pedestal—rather than with the marble sculptures of Olympia. The dates of these Olympia sculptures are very uncertain. It is possible that they were earlier than the Parthenon and that Pheidias studied them. It is possible, again, that he actually designed them, for he certainly wrought the great gold and ivory image of Zeus for the temple. It is possible, with all their more archaic look, that the sculptures of Olympia were delayed, and they may have been influenced by the Athenian works. In one way or another, I am inclined to think that Pheidias had something to do with their design. It is the sculptures of the Parthenon which have given a content to the name of Pheidias

Of course, Pheidias or any chief master did not do all or most of the sculpture of the Parthenon with his own hand. Ancient work and most real and right work is a shop product accomplished by a team of workers. I do not suppose that Pheidias wrought the gold and ivory statue wholly with his own hands; probably a dozen people, from a trusted foreman down to apprentices, worked at it. Nor can I believe, as said before, that the several parts of the great whole, the ivory image, metopes, frieze, and pediments, can be sorted out in regard to sequence in time. In a sense, all would have been "designed" by the chief sculptor in the first week of his appointment. How the pediments were to be treated would have been the most exciting problem of all, and the master must have thought it over the very first night when he went to bed. In the execution he would have carried on all concurrently—sketching this, modelling that, working on this, and retouching the other, directing the whole. The actual carving of the frieze was delayed until the slabs were built into the wall, but it had to be designed in advance, so that the slabs could be cut to size. It was essential that the choice marble blocks, as they came out of the quarry, should at once be recognised as suitable for this or that part of the work. It was necessary, too, that the sculptures should be ready as soon as the building was advanced enough to receive them. A pediment was not like a mantelshelf, a place where unknown objects might be set out, but the sculptures were the essence of the thing. That all followed one ordained scheme and were carried on more or less together is confirmed by correspondences among the different parts.

Craftsmanship.—The arts of marble cutting and bronze founding are very different, and we lose much by confounding the several results as "sculpture." Art is a middle thing, half thought, half matter, and each thought must be proper for the kind of body it is to occupy.* One great weakness of modern stone sculpture is its dependence on modelling rather than on cutting. I once heard William Morris say: "Most modern sculptures are only stone models of clay models." In a true work of sculpture a masonry element has to be preserved, there must be adequate substance and self-support, and a certain compactness which comes of cutting the finished work, with due economy of labour, out of a stone block. The technical problem is to get all that may be from a given block while conserving as much as possible of the material.

A large block of marble was a costly thing, and a fine block was too precious to be wasted in the cutting (consider the story of M. Angelo's David). So it is that in the noblest sculpture some evidence of the block from which a figure was born remains in the finished work.

Pheidias would frequently have visited the quarries to see what he could obtain, and he must have made such remarks as these: "I think I could get one of the angle figures out of that stone." "That block doesn't bear out at the corner, but if we push back the left foot a bit we can manage; in fact, it will be better." There was thus reaction between the marble block and the artist's first thought, which itself was conditioned by his total experience in marble working.

The actual cutting was done by a series of approximations; as for a moulding a splay is cut as a preliminary to curved profiles. In the delicate work of the Parthenon frieze, much was made out by little more than incising on the original plane surface and in sinking the ground round about. The metopes, although they are in the highest possible relief, show similar traces of the original blocks, and a flat surface brought up to some of them would touch many points distributed over the whole subject.

In full sculpture the problem must have been much the same in principle, all the parts had to be within a block of simple shape and reasonable size, and many of the points had to lie in planes which might easily be defined in reducing the block by masons' methods.

I suppose the sculptor, having sketched his figure, would then search for a suitable block. Or at times, having a fine block, he would see his figure in it from the first. He would then make a model to scale, adjusting the forms and twisting the limbs so that they would fill out the mass in such a way that every part would be strongly supported. Then, I imagine, some skeleton of rods, or a kind of box, would be built round the model representing the marble block, which was then reduced by simple masons' methods to approximate to the desired figure. Suppose a figure modelled in white plaster is placed in a box which just contains it, and coloured plaster is poured into the void space. We now have a figure contained in a block, and a series of sections would define every point.

In a recent study of the sculptures, Johansen goes too far, it seems to me, in his estimate of the modelling element and in supposing that Pheidias made full-sized models which were copied into marble. He is right so far, that the sculptor had knowledge and appreciation of modelled form obtained in bronze working, but the figures themselves show that they were born of stone. "In these pediment figures," he says, "we can nowhere demonstrate any reminiscence of the marble block." On the contrary, I believe that evidence of the influence of the block is obvious and that appreciation of the fact that the sculptures were hewn out of marble masses in a workmanlike way is necessary to our full enjoyment of them. Further, our understanding of the conditions and the methods of workmanship will furnish some data for the theoretical reconstruction of lost parts. The block form of Figure A of the west gable seems to have been a long triangular prism. Cecrops and his com-

* Pliny speaks of works in the two materials as marble sculpture and statuary. Marble sculpture (cutting) was an older art than the other, and there was a third, modelling.

panion came out of a large square block. The Horses of Helios were hewn from one which was low, their heads rising to a level top surface. Dionysos and two of the "Fates" appear to have been cut out of wedge-shaped blocks. (Figs. 1 and 2.) The

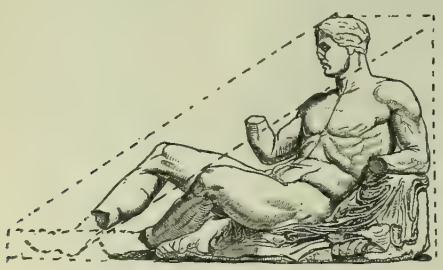

Fig. 1.

first figure of the great three and Eilithyia were obtained in blocks the ends or bases of which were cut at an angle so that the sides inclined. (Fig. 3.)

The wings of Iris, and probably of Nike, were attached by dowels, and so may have been a few other parts (some possibly caused by breakage), but, generally speaking, the sculptures of the Parthenon were each hewn from one block.

Another technical point to observe is the way in which thin pieces of drapery were used to strengthen and support the limbs of the figures. The left arm of the reclining male in west pediment is buttressed by drapery which passes over it in a loop ∩. The arms of Iris in the same pediment seem to have been supported by a long scarf which passed around both arms and touched the back low down with the central loop.

It has been argued that the great sculptures are later than the time of Pheidias, because it is evident that the drill was used in carving them. The drill was also used on the frieze and the metopes.
